ARTEOR™

ZigBee®

Revolutionary
wireless switches

 **legrand®**

Giving you added flexibility

Perfect for **unit blocks** where new cabling is difficult to run-in, or when you need a 2-way switch and additional cabling is not an option, these Legrand Arteor ZigBee switches provide a genuine wireless alternative.

Working on the internationally recognised ZigBee protocol, the use of an in-ceiling controller eliminates the need for additional cabling in tricky installations.

- ZigBee products can be integrated into an Arteor SCS automation system
- ZigBee wireless solutions include: lighting, shutters/blinds/curtain and scenario control

Wireless switch rear view

Two models available

Touchplates

- Seduce your customers with these slick touchplates in lustrous black or crisp white
- Available in square and rectangle models

Micropush Switch

- Choose from 17 impressive coverplate finishes - from basic white to wood, woven metal, leather and mirrored finishes

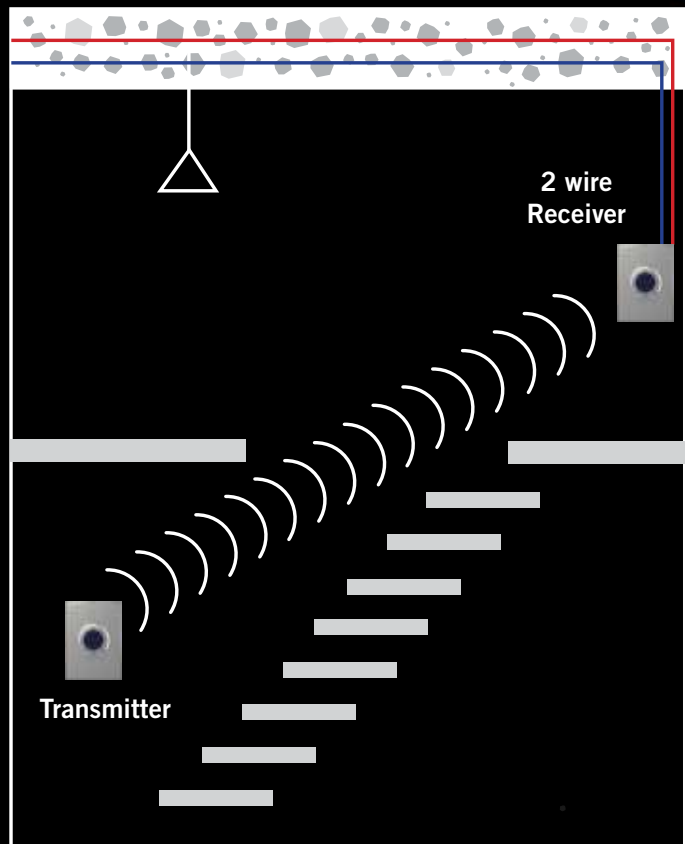

Example applications:

1

Wall mounted wired receiver switch receives signals from a battery powered transmitter.

- Ideal for retrofitting
- Perfect for heritage installations
- Transmits through concrete walls, ceilings or floors
- Keyring remote scenario controller available

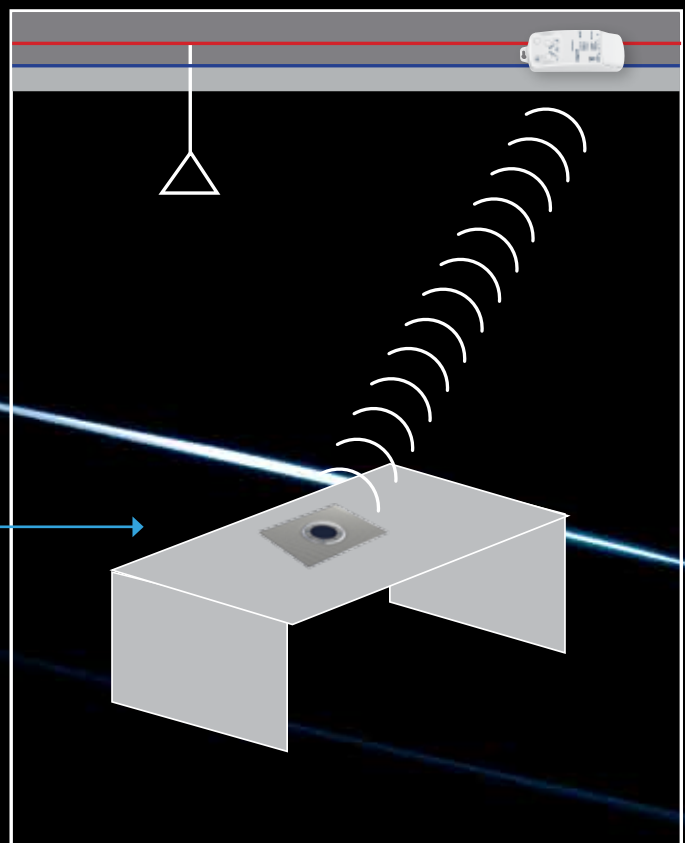

2

The in-ceiling controller receives signals from battery operated transmitter.

Mount transmitter on walls, or simply place on tables like a remote control.

Transmitter does not need to be wall mounted
