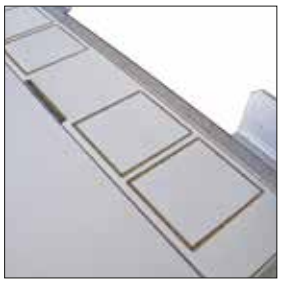
Changeable door hinge
The door hinge is easy to change - to convert, unscrew the hinge from the door joint and screw it into the opposite joint. The door is fastened using the pre-drilled fixing holes in the door and the cabinet body. The door hinge is on the right as standard.

Stainless steel hinges
High-quality stainless steel hinges with a push-out axle pin allow for easy removal of the door. If necessary, significant weight reduction can thus be achieved for transport.

Mounting tabs
The flush-mounted wall housings are screwed from the outside with two mounting tabs attached to the head part, each with a dowel on the wall behind it. Therefore, the equipped housing can be easily and quickly mounted.



Integrated ventilation system
Consisting of fan and smoke detector, ready for connection (230 V AC), this reduces the area that can be fitted by one grid unit (RE).

Subdistribution boards

Fire protection housing – Standard features

Cable sheath
Cable sheaths for bundle or individual cable entry are located at the top and bottom of the housing.

Cable sheath (delivery condition)
The cable sheaths are standard in all wall and standing housings. This ensures quick and easy cable entry for every application.

Silicone seal
To increase the protection class to IP54, a full-perimeter silicone seal is needed for the cable entry points (see page 18/338).

- Empty housing, prepared for installing distributor fields and CombiLine module system fields each minus one raster unit per housing
- Doors are easy to remove - axle pin can be pushed out (reduced transport weight)
- Door opening angle 180 degrees
- Locking with rod lock, 2-point locking
- Color light gray - similar to RAL7035, with colored edges
- High chemical resistance (surface characteristics based on DIN EN 438-2)
- High mechanical strength and stability, Brinell hardness 50 N/mm^2
- High material density 1,450 kg/m^3
- Integrated ventilation system (area that can be fitted is reduced by one grid unit)

Subdistribution boards

Fire protection housing – Additional equipment

Wall housing/standing housing when mounting or installing as freestanding unit

If installing as a free-standing unit, or in case of an extremely uneven wall, a BRW18 - BRW38 fire protection plate (42 mm thick) must be additionally screwed onto the back wall of the housing.

> The fire protection plate must be ordered separately, see page The fire protection plate must be ordered separately, see page 18/328

Fire protection housing – Configuration example/mounting instructions

Configuration example: Surface-mount wall housing AF

2/5AF302

Configuration example: Standing housing SF

3/9FS302

*Middle support rail adjustable up and down

Important notes

For flush-mounted, surface-mounted and standing housings, the mounting frames needed to hold the CombiLine modules or distributor panels are prefitted (for CombiLine modules and distributor fields/combination sets see chapter 8)
There is a fan in the upper part of the housing which occupies the space of one grid unit (1 RE). This space has a closed cover and is not available for the installation of CombiLine modules or distributor fields/combination sets.
When planning modular system fields for standing housings, the middle support rail, which extends over the entire width of the housing, must be taken into account (see configuration example Standing housing SF).

Subdistribution boards

Fire protection housing – Flush-mounted wall housing

Flush-mounted wall housing UF, IP41 ⧈
Housing depth 205 mm
Housing for flush mount

Main features

- Material with A2 surface coating - non-combustible, tested in accordance with DIN 4102-1
- Fire resistance F30/F90, tested in accordance with DIN 4102-2
- Protection type in accordance with IP41 ⧈ protection class II
- Smoke-tight, cold smoke-tight

Structure

- Flush mount (solid wall F30/F90)
- Prepared for installation of distributor fields
- Prepared for expansion with CombiLine modules on EDFmounting frame
- Changeable door hinge
- Door can be de-attached, thereby reducing weight
- Locking with sash lock using swivel handle with double bit half cylinder
- Cable entry at the bottom and top
- Door internal
- Opening angle 180 degrees

Surface

- Color light gray - similar to RAL 7035, with colored edges
- High chemical resistance
- High mechanical strength and stability

Additional equipment/options

- A variety of decorative surfaces

Fire protection housing – Sheath housing

Sheath housing MF, IP41
Housing depth 312 mm
Housing for mounting using available distributors

Features

- Material with surface coating A2 – non combustible, tested according to DIN 4102 Part 1
- Fire resistance F30, tested according to DIN 4102 Part 2
- Reduce fire load for 30 minutes
- Standard surface CPL
- Impervious to smoke

Design

- Empty housing withour rear panel
- Changeable door hinge, optionally right or left
- Door can be removed
- Door opening angle: 180 degree
- Espagnolette closure locking using swivel handle with double-bit semi-cylinders
- Fire protection seal, self-foaming in case of fire
- Cable entry, top and bottom
- Cable cooling duct top an bottom, 100 mm heigth (EUL31) or 300mm height (EUL91)

Surface

- Light grey coating – similar to RAL 7035, edges of contrasting colour
- High chemical resistance
- High mechanical resistance and stability

Fire protection housing – Terminal boxes without terminal block

Terminal boxes without terminal block KF, IP41 ⧈
Housing for wall or ceiling mounting
Mounting material for ceiling mounting available on request

Material + Decor A2 Class | Fire Resistance 30 Min. | Fire Resistance 90 Min.

Main features

- Material with A2 surface coating - non-combustible, tested in accordance with DIN 4102-1
- Fire resistance F30/F90, tested in accordance with DIN 4102-2
- Protection class in accordance with IP41 ⧈
- Smoke-tight

Structure

- Mounting via 4 holes in the frame corners using the enclosed mounting material
- Mounting to wall or ceiling possible
- Cover screwed with two self-locking nuts
- Cover provided with a handle groove
- Cable entry points from 2 sides
- In case of fire, the cable sheath automatically foams up
- Easy mounting of the fixtures using pre-drilled holes
- Easy insertion and clamping of the cables thanks to a detachable frame plate system (layer structure)

Surface

- Color light gray - similar to RAL 7035, with colored edges
- High chemical resistance
- High mechanical strength and stability

Fire protection housing – Facing doors

Facing doors VF IP54

- Fire-resistant and smoke-tight seals
- Panel material with surface coating - non-flammable
- Fire resistance 30 and 90 minutes
- Mounting on different wall constructions

Material + Decor A2 Class | Fire Resistance 30 Min. | Fire Resistance 90 Min.

Fire protectionfacing doors are intended for the separation of existing flush-mounted wall distributions from escape and rescue paths.

Subdistribution boards

Fire protection housing – Facing doors

In the standard version, the distributor may protrude 20 mm out of the wall at the most. Old doors should be de-attached and removed.
The facing door must be at least 115 mm above the existing distributor, i.e. this covering dimension plus the door thickness, due to the opening angle, must be maintained around the existing distributor.

If the current distributor protrudes more than 20 mm from the wall, an additional extension frame can be ordered for the facing door.

Tested material with surface coating DIN 4102 Part 1; material class A2

Integrated frame with mounting points

Removable stainless steel hinges

Fire and smoke protection seal all around

2-point locking using rod lock

Swivel handle in stainless steel look with double bit half-cylinder

Subdistribution boards

Fire protection housing – Facing doors

Facing doors VF, IP54
Door depth for 30 minutes 51 mm
Door depth for 90 minutes 71 mm
Door mounted in front of existing flush-mounted distributors

Function

- Material with A2 surface coating - non-combustible, tested in accordance with DIN 4102-1
- Fire resistance F30/F90, tested in accordance with DIN 4102-2
- Smoke-tight
- Protection class in accordance with IP54

Structure

- 1-wing door
- Door opening angle approx. 180 degrees with F30 version, approx. 150 degrees with F90 version
- Door hinge on right
- Surrounding wall compensating frame (W x D: 115 x 28 mm) with mounting holes
- Doors opening onto the frame
- Locking with swivel handle in metal look with DIN half cylinder
- 2-point locking with rod lock
- Stainless steel hinges with push-out axle pin for de-attaching the door wings
- Mounting material: Frame dowels, screws included in scope of delivery

Surface

- Color light gray - similar to RAL7035, with colored edges
- High chemical resistance
- High mechanical strength and stability, Brinell hardness 50 N/mm^2
- High material density 1,450 kg/m^3
- Surface characteristics based on DIN EN 438-2

Additional equipment/options

- Additional compensating frame for larger covers
- A variety of decorative surfaces
- Door hinge on left

Important notes

Minimum internal dimension of facing doors = niche dimension of the flush-mounted wall box without flush-mounted frame

Facing door swings over the frame on the hinge side => leave at least 40 mm

Subdistribution boards

System pro E® energy
The complete cabinet system ...

The System pro E® energy range includes two types of cabinets and one internal configuration system.

System pro E® energy L
Tailored and proven wall mounted and floor standing sub distribution boards up to 800 A.

Delivered in flat kits, System pro E® energy L provides a protection degree up to IP43 (IP30 without the door).

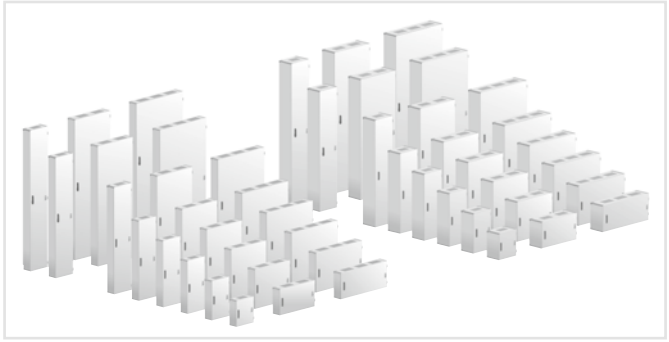
System pro E® energy M
Monoblock cabinet with attachable side panels, available in both configurations: wall mounted and floor standing.

System pro E® energy M sub distribution boards provide a protection degree up to IP55 (IP30 without the door).

System pro E® energy Combi
The common internal configuration system facilitates the installation of a wide range of ABB Low Voltage devices based on its modular system, delivered in flat packs.

Subdistribution boards
System pro E® energy
Product benefits

Easy, Simple and Flexible



- Cabinets of 400, 600 and 800 mm width. The 800 mm wide cabinets can incorporate an integrated cable compartment.
- Heights available from 600 up to 2000 mm, always with a common depth of 250 mm, horizontal coupling of 2 or more cabinets possible
- Modular concept: all functional units in steps of 50mm in height
- The busbars can be assembled vertically or horizontally
- Only one type of tool is required for the assembly of the cabinets

Innovative cable entry and ease of installation
Several options provide the right solution for any kind of wiring application. System pro E® energy offers the options of cabinets with the top and bottom in different executions: plain with pre-knockouts for flanges, big opening.

The wide range of flange types provides the right solution for every application. The flanges can be attached without the need of tools. System pro E® energy offers unrestricted access during operation, expansion, maintenance and functional monitoring.

Plinth
The common plinth for System pro E® energy L and M has a height of 100 mm, and up to 3 of them can be stacked without any additional accessories.

The plinth consists of corner parts and lateral, front and back covers. Removing the front and back panels simplifies the panel's transportation and provides the required accessibility for the wiring in the final installation. The same applies to coupled cabinets, the removal of the internal lateral covers enables the cross-wiring between cabinets.

Product benefits

Quick to assemble

- Assembly can be done by a single person
- Tool-free snap-on system thanks to click-in supports for DIN-rails, mounting plates, busbar holders, etc.
- Pre-assembled handles with ¼ turn screws for cover plates
- System pro E® energy Combi provides a time-saving installation due to the hook-in technology. This quick assembly limits the numbers of screws.
- Guiding ledges in back panel for top and side panel fixation
- Generous wiring space, enough for vertical cable ducts of 80 mm width on each side
- Markings in the fixation profiles to quickly position the functional units and cover plates
- Frame allowing the removal of all cover plates at the same time
- Innovative flange technology with tool-free installation

Door ready to mount

- Common doors for System pro E® energy L and M
- Choose between plain and transparent doors for all cabinet widths
- PUR gasket to guarantee perfect closing and the protection degree
- 3 point locking system already mounted
- Easy and quick mounting without tools
- 130º opening angle
- Handle with several inserts available to adapt to the needs of each customer's individual requirements

System pro E® energy
Product benefits

Safe for users, reliable and sturdy

The combination of the System pro E® energy cabinets and ABB's low voltage devices are certified according to the standard IEC 61439-2 / -3 and IEC62208

Protection degree against dust and liquids:
- System pro E® energy L: up to IP43
- System pro E® energy M: up to IP55

Strong mechanical construction
- Back panel galvanized sheet steel 1.5mm thick
- Internal corner parts to fasten the external panels, the frame of the cover plates and to execute the horizontal coupling of the cabinets
- Vertical profiles to fasten the mounting plates and isolator mounted at the back panel providing additional rigidity
- External panels sheet steel, powder coated
- Optional horizontal reinforcement for coupled cabinets
- Internal segregation up to Form 2b
- Tempered glass for the transparent door

- Coupling profiles and accessories
- Required hardware

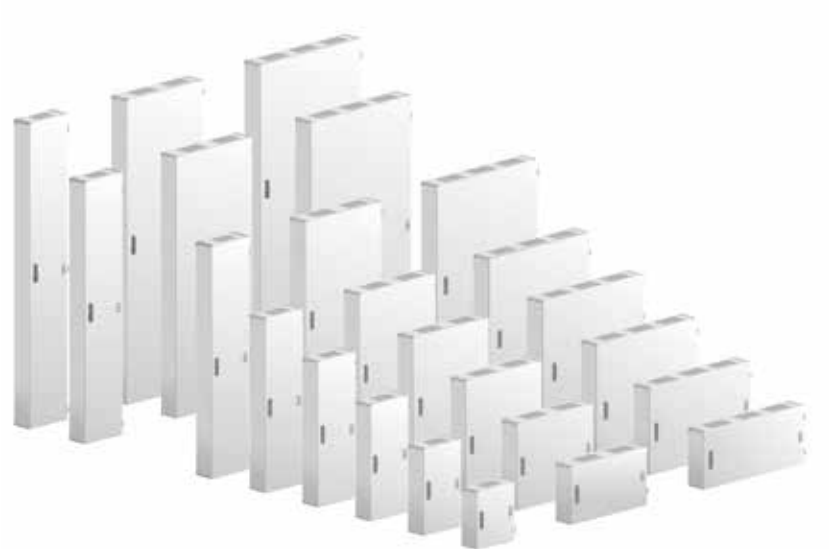
Top & Bottom
2 different options:
- With a wide opening to maximize the entry surface
- Plain with knock-outs for cable flanges

The kit includes 1 unit of the selected top and bottom, with all the required fixation hardware.
It's required to order 2 top & bottom per cabinet.

Plinth
- 100 mm height
- Stackable up to 3: 300 mm, without accessories
- Front, back and side covers removable
- Easy to fix
- Hardware to fix to the cabinet included

Integrated cable compartment
Possible to add an integrated cable compartment in the 800mm wide cabinets
- Profiles and cover plates to build the integrated cable compartment

Interior fitting: Modular distribution panel system
- Pre-assembled quick mounting system to fix the isolators for the busbars, DIN-rails, mounting plates, covers, etc.
  See chapter for System pro E® energy Combi (page 317)



Plain or transparent doors
- 3 point locking system already mounted
- PUR gasket to guarantee perfect closing and the protection degree
- 130° opening angle
- Swing handle for 1 400 mm and higher doors
- Wide range of accessories

Plastic or metal flanges
- Wide choice of cable flanges
- Metal flanges for wide cable opening

Technical specifications and product features

Technical specifications	
Standards / requirements	IEC 61439 -1/-2/-3* and IEC62208
Protection Class	Class I, earthed
Pollution degree	2
Segregation	Form 1 and Form 2
Degree of protection	IP43
	Without door IP30
Mechanical impact Strength	IK 07- knock outs
	IK 08 - without door, transparent door
	IK 09 - plain door & side panels
Conditions of installation	Indoor installation
	Ambient air temperature max. +40 °C
	Ambient air temperature min. -5 °C
	Operating temperature max. +55 °C
	Storage temperature max. +55 °C
	Storage temperature min. -40 °C
Rated current (I_n)	800 A
Rated operationa voltage (U_e)	415 V
Rated insulation voltage (U_i)	1 000 V
Rated short-circuit current (I_{cw})	32 kA/1s
Rated current of busbar systems	800 A in IP43

Product features		
	Housing and door	Color RAL 7035
	Rear panel & mounting profiles	Sendzimir zinc plated steel 1.5 mm
	Side, top and bottom panel	Epoxy-polyester coated sheet steel 1.2 mm
	Plain door	Epoxy-polyester coated sheet steel 1.5 mm
	Transparent door	Epoxy-polyester coated sheet steel 1.5 mm and safety glass 3 mm thick
	Cover plates	Epoxy-polyester coated sheet steel 1 mm
	Door opening angle: 130°	
	Doors with espagnolette closure, 3 points locking system	
	Doors for wall-mounted cabinets: with latch plate and 3 mm double bit pin	
	Doors for floor-standing cabinets: with swing handle and 3 mm double bit pin	
Assembly options	Prepared to be fitted with System Pro E® energy Combi modules and mounting plates	
Forms of delivery	Flat kits

System pro E® energy M

System overview

Monobloc cabinet + Side walls + Plinth + Integrated cable compartment + Functional units

Busbars + Door + Cable flanges

Subdistribution boards

System pro E® energy M

System overview

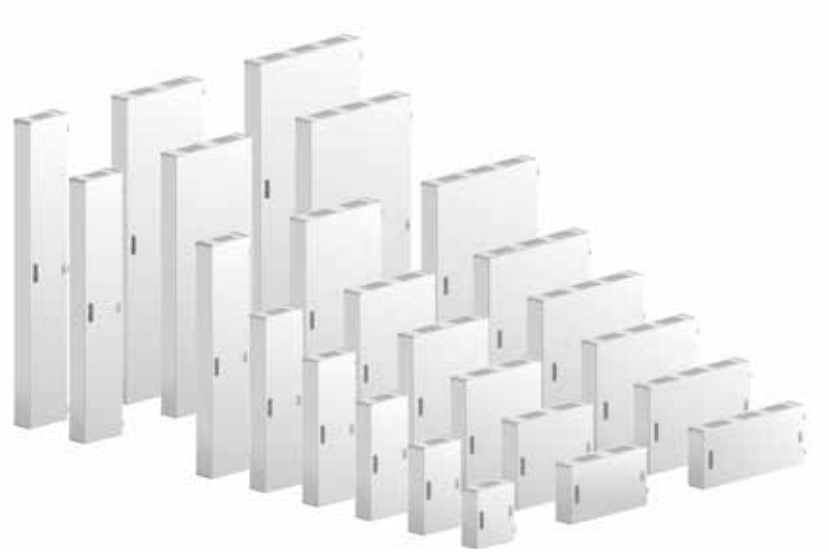
Cabinets: Monoblock
- open sides
- Top: openings for flanges (400 mm) or wide opening (600 & 800 mm)
- Bottom: plain with pre-knock outs for flanges
- Included the frame for the cover plates
- Cabinet can be rotated 180°

Side panels
- Delivered in 2 units.
- Only required 1 kit per panel (combination of several cabinets coupled horizontaly)

Integrated cable compartment
Possible to add an integrated cable compartment in the 800mm wide cabinets
- Profiles and coverplates to build the integrated cable compartment.

Interior fitting: functional units and busbars
Kits to fix the isolators for the busbars, the DIN rails, mounting plates...and the covers
See the chapter for System pro E® energy Combi

Plinth
- 100 mm height
- Stackable up to 3: 300 mm, without accessories
- Front, back and side covers removable
- Easy to fix
- Hardware to fix to the cabinet included



Door
Plain or transparent
- Same doors for IP43 and IP55 cabinets
- 3 points locking system already mounted and PUR gasket
- Mount without tools
- 130° opening angle
- Swing handle for 1 400 mm and higher doors
- Wide range of inserts as accessories

Flanges
Plastic or metal. Same for IP43 and IP55
- Several cable flanges.
- Metal flanges for wide cable opening

Technical specifications and product features

Technical specifications	
Standards / requirements	IEC 61439 -1/-2/-3* and IEC62208
Protection Class	Class I, earthed
Pollution degree	2
Segregation	Form 1 and Form 2
Degree of protection	IP55
	Without door IP30
Mechanical impact Strength	IK 07 - knock outs
	IK 08 - without door, transparent door
	IK 09 - plain door, side panels
Conditions of installation	Indoor installation
	Ambient air temperature max. +40 °C
	Ambient air temperature min. -5 °C
	Operating temperature max. +55 °C
	Storage temperature max. +55 °C
	Storage temperature min. -40 °C
Rated current (I_n)	800 A
Rated operationa voltage (U_e)	415 V
Rated insulation voltage (U_i)	1 000 V
Rated short-circuit current (I_{cw})	32 kA/1s
Rated current of busbar systems	800 A in IP43

Product features		
	Housing and door	Color RAL 7035
	Cabinet	Epoxy-polyester coated sheet steel 1.5 mm
	Plain door	Epoxy-polyester coated sheet steel 1.5 mm
	Side panels and top & bottom	Epoxy-polyester coated sheet steel 1.25 mm
	Transparent door	Epoxy-polyester coated sheet steel 1.5 mm and safety glass 3 mm thick
	Cover plates	Epoxy-polyester coated sheet steel 1 mm
	Door opening angle: 130°	
	Doors with espagnolette closure, 3 points locking system	
	Doors for wall-mounting cabinets: with latch plate and 3 mm double bit pin	
	Doors for floor-standing cabinets: with swing handle and 3 mm double bit pin	
Assembly options	Prepared to be fitted with System Pro E® energy Combi modules and mounting plates	
Forms of delivery	Monobloc enclosure with open sides

Internal form of separation

Busbar systems

Accessories

(The Right Module for every type of application)

Subdistribution boards

System pro E® energy Combi - Product benefits

One internal configuration system for all cabinets

All internal configuration and the busbar system for both systems (IP43 and IP55). The internal configuration up to 800 A.

Easy assembly / Spring mounting

- Assembly can be done by a single person
- Pre-assembled captive screws
- 1/4 turn screws for cover plates
- Click-in supports for functional units and busbar holders
- No tools needed
- Frame to remove all cover plates at once

Depth adjustable DIN-rail

DIN-rail can be adjusted in five depths:
- RCD, SPD, MCD S200
- MCB S750/S800
- XT1, XT3, ATS125
- terminal
- ATS-compact

Flexible in assembly, ease to combine

With its new mounting concept System pro E® combi provides more flexibility and access for installation and wiring. Placed horizontally on two trestles, makes the assembly and wiring very comfortable.

Subdistribution boards

System pro E® energy Combi

Product benefits

Easy cover handeling

Time-saving fixation and adjustment as well as the simple closure system with 1/4 turn quick-lock provides easy handling of the covers and standard earth connection. When using devices in the covers a safe earth connection is guaranteed through 6 mm² cable with ring shoes on both sides. The 90° opening angle of the hinge set ensures optimal accessibility.

Cabeling / wiring solution

The support for different dimensions of wiring ducts have the same level for horizontal and vertical usage. An additional profile for stabilization of wiring duct and for mounting wire holders is available.

KITS available for all XT-breakers

Modules for moulded case circuit breaker Tmax (XT1 - XT6), 3 and 4 pole versions, in horizontal and vertical position.

KITS for ATS, TruOne

Modules for automatic transfer switch (ATS), in vertical position up to 800 A.

Optimal accessibility and ease of installation

The removable frame as standard gives the possibility to remove all covers in one handling and provides quick access.

Form of internal seperation (up to 2b)

For the busbar sytem behind the device area is a horizontal transparent partition available. To separate the busbar system in external cable container it is possible to use a vertical separation.

Modules for moulded case circuit breaker Tmax, horizontal

QB3H62000

QB4H82000

Module for:

- Tmax breaker horizontal 3-/4-pole
- Unequipped set for ABB Tmax as an incoming or outgoing breaker

Content:

- Mounting plate of sheet steel with cut-outs (for fixed version with level operation with front Terminals)
- Support to fix to the rear panel profiles
- Cover plate with cut-outs (3-/4- Pole) breaker
- Cover plate with 1/4 turn quick-lock

QDS1B6300

Breaker module for:

- Unequipped module for XT2 4 pole + RC sel.
- DIN rail adjustable
- Cover slotted
- Breaker positioned symmetrical behind the cover

Content:

- DIN rail is fixed on a mounting bracket
- DIN rail is double DIN, made of aluminium
- On the back-side it is possible to use Unifix L
- 1/4 turn quick-lock

Modules for switch disconnector OT, horizontal

QS4H63500

QS4H83500

Module for:

- Switch disconnector 3-/4-pole (horizontal)
- Unequipped set for ABB switch disconnector (OT…E03/04) as an incomer or outgoing switch

Content:

- Mounting plate of sheet steel with cut-outs and fixing points
- Support to fix to the rear panel profiles
- Cover plate with cut-outs for rotary handle in top of the center (Handle on one side of the switch)
- 1/4 turn quick-lock

Important:

- No possibility to use busbar system behind modules of OT630 and OT800

Uniclic plug-in distribution system, overview

Uniclic plug-in distribution system

Uniclic is a secondary plug-in distribution system of 250A, 660V~ 60kA peak. Uniclic is a busbar for modular devices such as MCBs as for comfort functions.
Uniclic can be positioned between the DIN-rails, indepentent on the type of system enclosure: System pro E enery, TwinLine N, System pro E power and others.

The main advantage of Uniclic is the safety aspect (IP20): adding or removing electrical circuits in a panel board without disconnecting the power. All outgoing circuits stay in the operational function, due to the fact that all operations are done using the insulated click connection, without touching the life parts, not even when using an insulated tool.

The Uniclic distribution system is suitable for integration in all system enclosures conform to IEC 60439-1.

Uniclic plug-in distribution system

Material:

- Connecting Lugs, copper, uncoated
- Housing / Body, PC+PU resin, grey
- Protective Profile, PVC, clear
- Nominal Voltage, 400 V
- Nominal Current, 250 A
- I_{cw} (1 sec.) 10kA / I_{pk} 61kA
- Degree of protection IP20

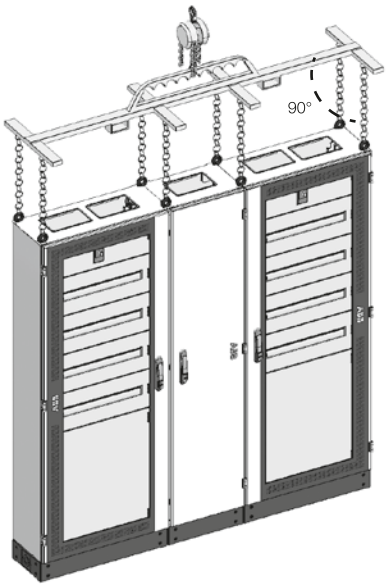
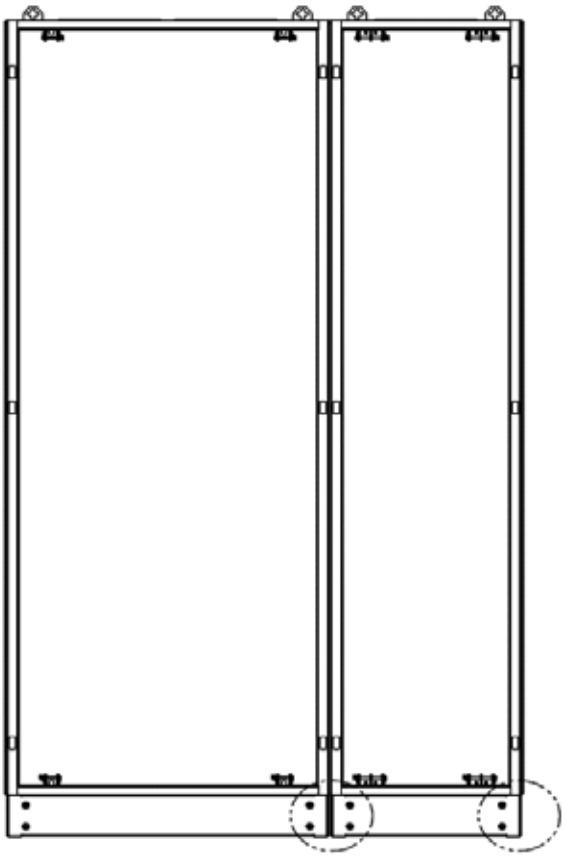
Transport by Crane

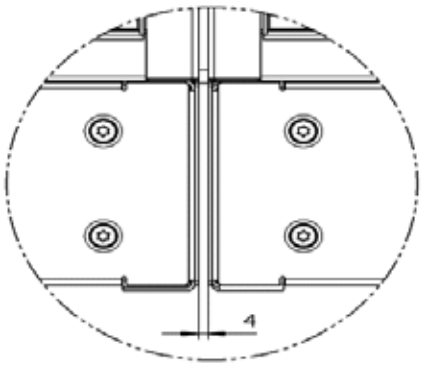
—
Lifting of the System pro E® energy is possible as indicated. Always use the ABB transportation lugs type ESAC3006P4 and for side-by-side structures lifting, use the reinforcement. Also consider the weight limits of the cabinets.



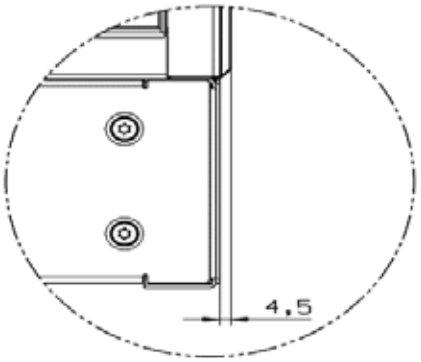
max. 150 kg



max. 180 kg



max. 420 kg



max. cabinet combinations
800 + 400 + 800 mm, wide cabinets

UK600
Consumer units

Up to 200 % extended connection space

Connection set for horizontal and vertical connection

Terminals can be mounted to the side, space-saving and flexible

Enclosure for flush- and hollow-wall-mounting

Flat trim frame, adjustable to uneven surfaces

Cable inlet with integrated terminal fixture, at the top and bottom

Wire holder for cable entry

Removable device support

Available in up to 5 rows

TIP-in-closure, possibility to insert a closure with lock

Tool-free reversible opening left / right

Door and frame available in different design variants

Snap-on cable inlet with integrated terminal fixture allows easy insertion of incoming and outgoing cables and uses a quick, single-hand-operated push and-stay design, resulting in 80 % more cable inlet space. Both cable inlets can be screwed tight when installation is complete.

The generous wiring space considerably facilitates installation works for up to 200 % more wiring space and “slide in” wire holder.

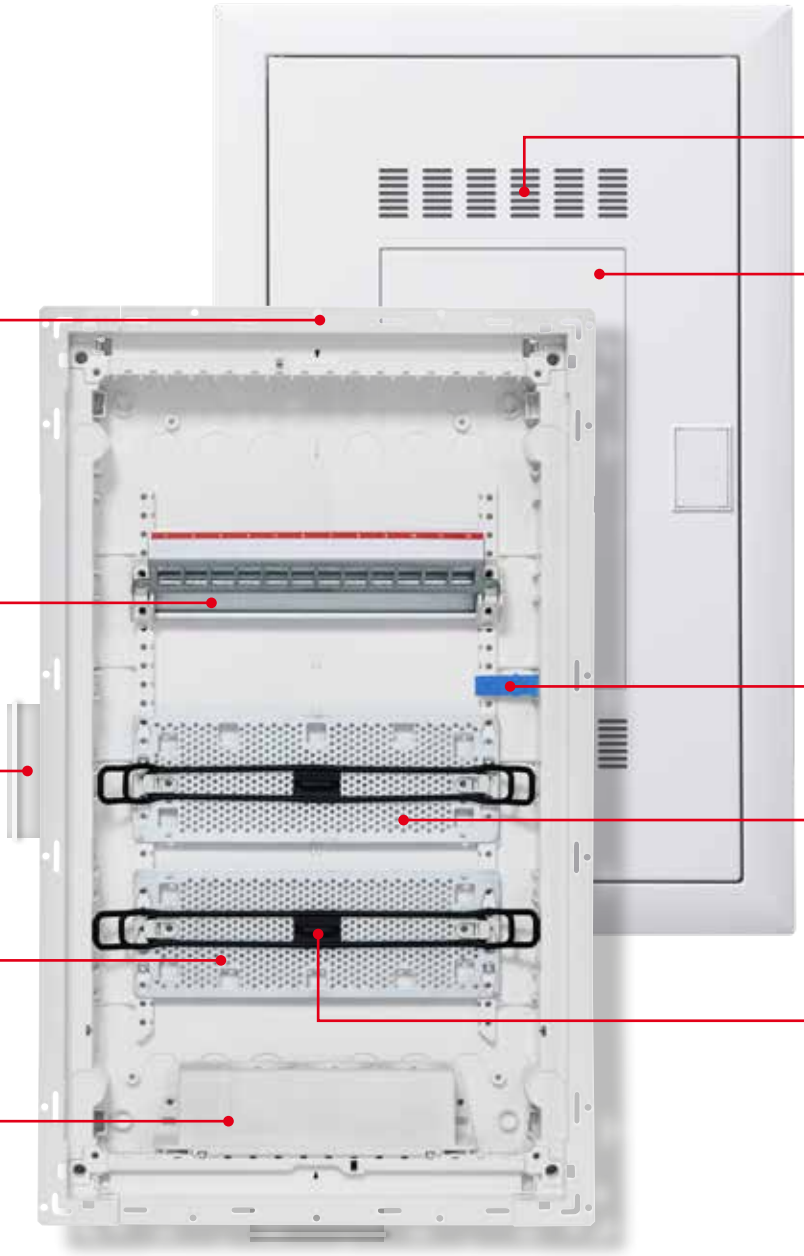
All enclosures of the UK600 series are suitable for hollow-wall installation. Upgrading is incredibly quick and simple – just as easy as the hollow wall installation itself. You just need the UZ91P4 hollow wall set for UK600. No screws, yet nothing can slip. Fastening it is as easy as fastening cable ties.

Time-saving installation thanks to intelligent plug-in technology. The N/PE terminals which are laterally assembled provide a high level of flexibility. There are also versions available with screw-type terminals.

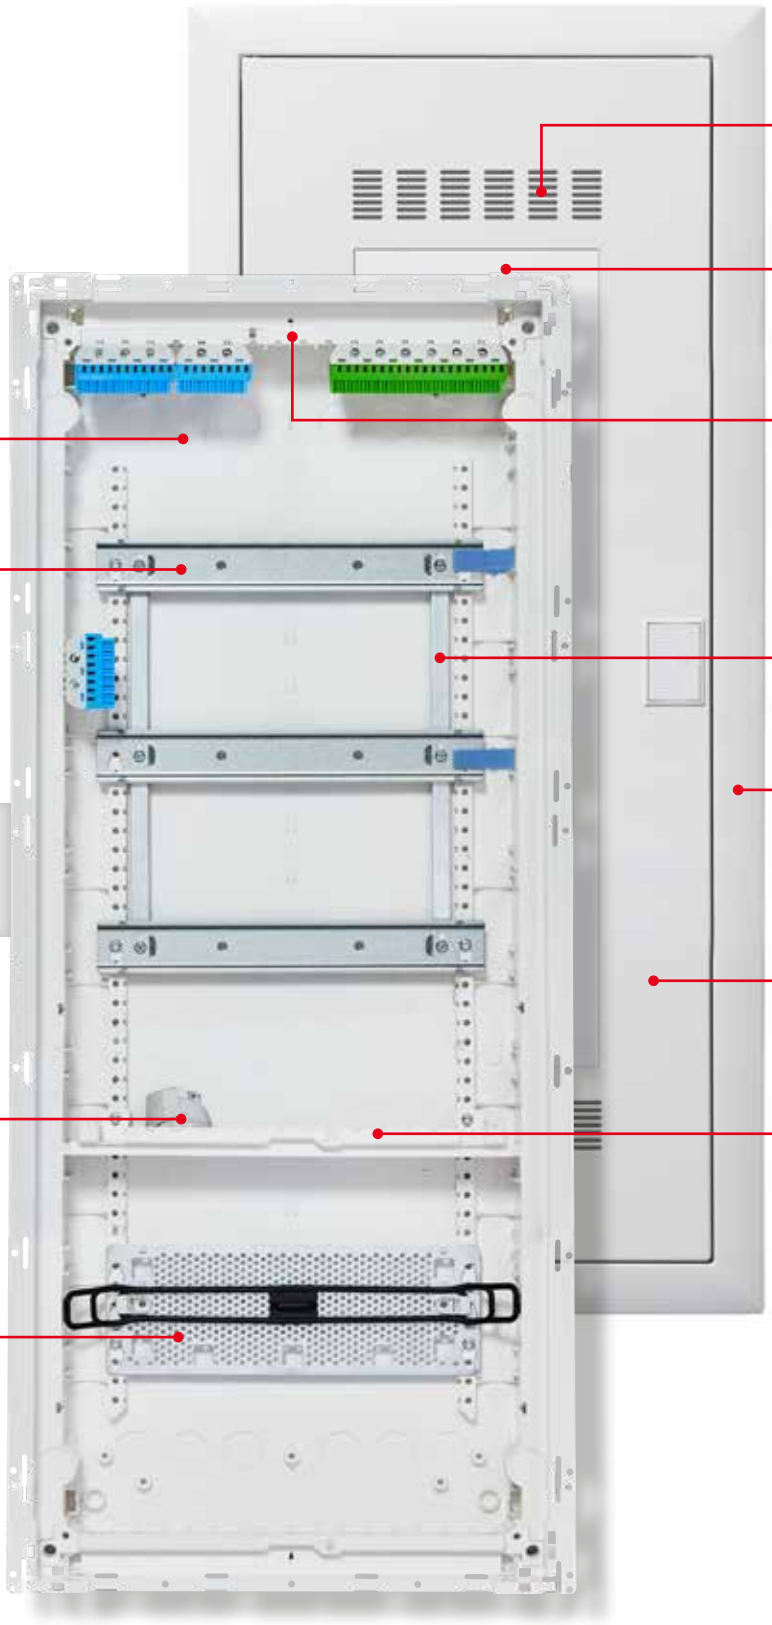
An innovative connection set for horizontal and vertical connection of several combi enclosures enables flexible extension and combination options.

The stable, removable device support can be snapped in and is installed quickly without tools. Here too, a variety of common installation techniques have been catered for – the device support can also be fixed in position using screws.

The triple socket makes the connection of different power supplies very easy. it offers 120° swiveling and can be snapped onto cable inlet.



With the new media enclosure all conceivable devices such as routers or media modules find a safe space. The innovative combi enclosure combines the media and the consumer unit in one single cabinet, with a flexible partition separating the two parts from each other.



An attractive design feature – a perfect example of how easy it can be to combine functionality with design. The variety of high-quality doors and frame designs make the UK600 consumer units and media enclosures a design element in every living space. Media doors are available as Wifi-friendly and ventilated versions.

Consumer units

UK600 basic version without trim frame and door

01 Screw-terminals
02 Wall box
03 Device carrier
04 Cover
05 Trim frame with sheet steel door

Flush-mounted consumer units – UK600, IP30 , ;*
I_n up to 63 A
Consumer units DIN EN 60670-24, DIN 43871
For building installation according to DIN 18015
Mechanical impact strength: IK07
Available in 1 up to 5 row versions as flush-mounted consumer units
Can be upgraded for surface-mounting or partially recessed mounting
Upgradeable for hollow-wall-mounting using UZ91P4
Wall box:
- non-warp, break-proof, non-flammable, low-halogen plastic
- with cable strain relief comb
- with detachable cable inlets
- combinable
Wall grips
Reversible opening (tool-free)
Communication channel for horizontal and vertical connection
Device support with removable DIN rail
With N/PE screw-terminals
Wire holder for professional cable entry
Cover with 90° quick-action screws, lead-sealable
45 mm slots for 12 devices, expandable to 14
Labelling system
Trim frame and sheet steel door, adjustable for uneven surface
Colour: White, RAL 9016

*in connection with hollow-wall-mounting set UZ91P4

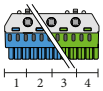
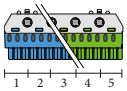
* In connection with a standard door, with TIP-in closure there will be one space unit less.

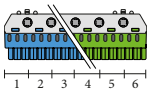
Consumer units

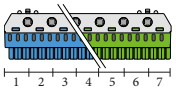
N/PE quick-terminals

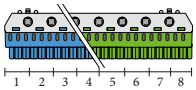
Configure based on your needs

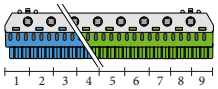












The modularity and the extensive range of products allow customizing the products to the needs based on real-world use. Various quick-terminals can be combined on one quick carrier as necessary. If a larger N or PE terminal has to be used, simply connect two quick-terminals using the ZK10P10 connecting bridge.

Product benefits

- Flexible terminal system for several N potentials: Screw connections: 2.5 to 25 mm² for rigid conductors; for flexible conductors up to 25 mm² (wire end sleeves required)
- Spring connection: 1.5 to 4 mm² for rigid conductors; for flexible conductors up to 25 mm² (wire end sleeves required)
- Optimal when using several residual current circuit breakers
- Ease of expansion using connecting bridges
- Precise assignment of the terminals by clear colour coding: N = blue, PE = yellow-green
- Easy labelling of the terminals using pre-printed, self-adhesive number strips
- Wide range of applications: may be used in the UK600 and MISTRAL65 consumer unit series, in all compact distribution boards, and with all meter cabinets, wall-mounting and floor-standing cabinets

Consumer units

Media enclosure UK600

Flush-mounted consumer units – UK600, IP30 - , ; *
Consumer units UK600 as multimedia version,
dimensions according to the standard enclosures as per DIN 43871
Mechanical impact strength: IK07
Available in 2 up to 5 row versions as flush-mounted consumer units
Can be upgraded for surface-mounting or partially recessed mounting
Upgradeable for hollow-wall-mounting using UZ91P4
Wall box:
- non-warp, break-proof, non-flammable, low-halogen plastic
- with cable strain relief comb
- with detachable cable inlets
- combinable
Reversible opening (tool-free)
Communication channel for horizontal and vertical connection
With removable DIN rail in the top row
Patch panel in isolated design for up to 12 keystone modules
Modular perforated sheet steel mounting plate for devices
Simple and tool-free installation of the devices using the "device strap"
120° swiveling triple socket for the power supply of built-in devices
Wire holder for professional cable organization
With trim frame and sheet steel doors as sheet steel door with white plastic insert, for improved Wifi signals or as basic option without trim frame and door

*in connection with hollow-wall-mounting set UZ91P4

MISTRAL41 and MISTRAL Multimedia
Sustainability, flexibility and design

Innovating today does not just mean looking for functional and technologically advanced solutions. For ABB, being innovative means embracing a longer-term perspective by using eco-compatible materials for our products which respect the environment even at the end of their life cycle. For this reason, 100 % recyclable halogen-free thermoplastics (for GWT650 versions) have been used for the consumer units. Their environmental compatibility has been evaluated using the Life Cycle Assessment (LCA) method, an objective tool for assessing energy and environmental impact which analyses the energy and materials used and the emissions released during production.

Halogen Free

(for GWT650 versions)

Everything about the MISTRAL series has been designed to make installation easier, allowing you to set up high-quality consumer units that look great anywhere.

Smarter multimedia space
The MISTRAL consumer units can now also integrate all your multimedia equipment, ranging from internet routers to switch panels, antenna and voice splitters and socket outlets. MISTRAL multimedia is available for both flush and hollow-wall installation and comes with a variety of accessories.

Elegant design features
The range of design features includes transparent or opaque doors that open up to 180° enabling full access to the interior of the units. Perfect symmetry also means you can rotate either the front panel or the entire unit to let the door open from the right or the left.

Fast and easy installation
Ample internal space makes cabling fast and easy, and also enables you to anchor cable ties to special eyeholes in the frame. Various snap-on terminal blocks in two different colours can be installed in both the upper and lower part of the units, offering you even more flexibility. The MISTRAL41 series is also fully compatible with a unified range of accessories for a wide variety of applications.

MISTRAL41F
Always a perfect solution for every wall

Our MISTRAL41F series of consumer units gives you the freedom and flexibility to install any type of electrical distribution system in residential buildings. Choose from a brick walll or hollow wall version to meet your individual needs. These IP41-rated units have been designed from scratch to enhance the unique features you expect from ABB in terms of versatility, efficiency and safety. The MISTRAL41F series is one of the widest ranges on the market, so there always is a solution to fit your requirements. The units come in various sizes with three cable entry options and space for up to 72 modules. Everything about the MISTRAL41F series has been designed to make installation easier, allowing you to set up high-quality consumer units you can be proud of.

Reliable technology combined with a modern decorative look in a compact, elegant design.

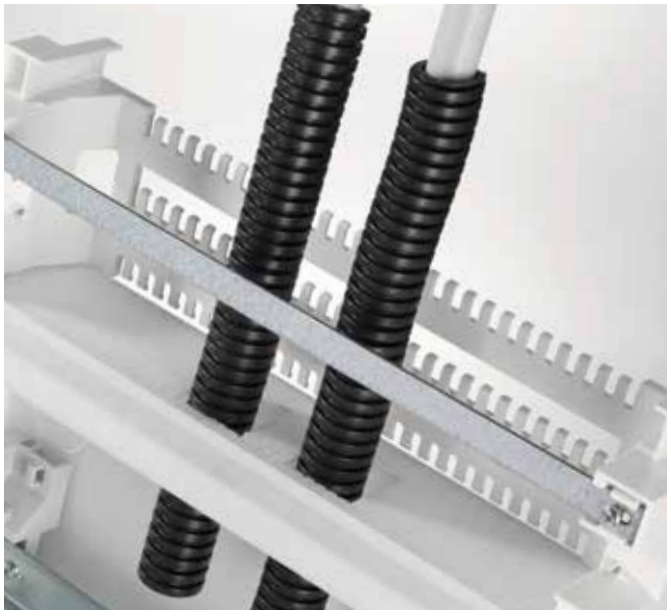
Door opens up to 180° allowing full access to the interior of the unit.

The symmetrical design allows opening of the reversible door either from the left or from the right.

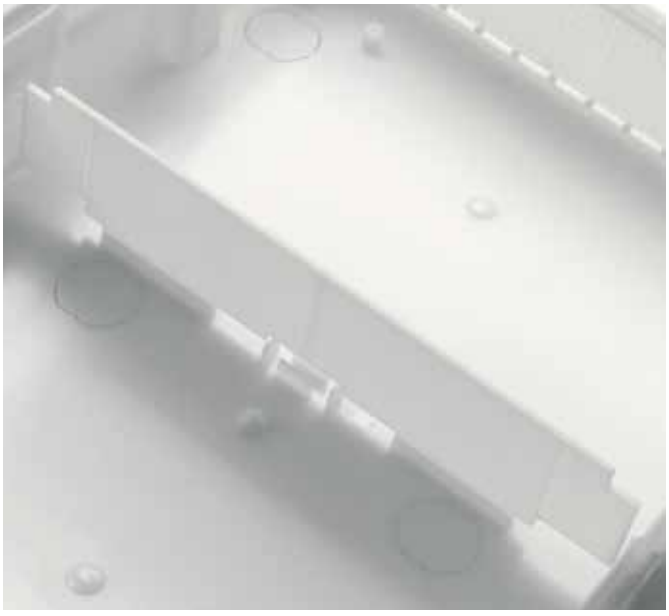
Door available in two versions: petrol blue and opaque.

Multimedia version for integration of internet routers, antenna or voice splitters.

In the flush-mounted version the depth of the base box ensures a perfect balance between internal space and the possibility of installation in thin walls.



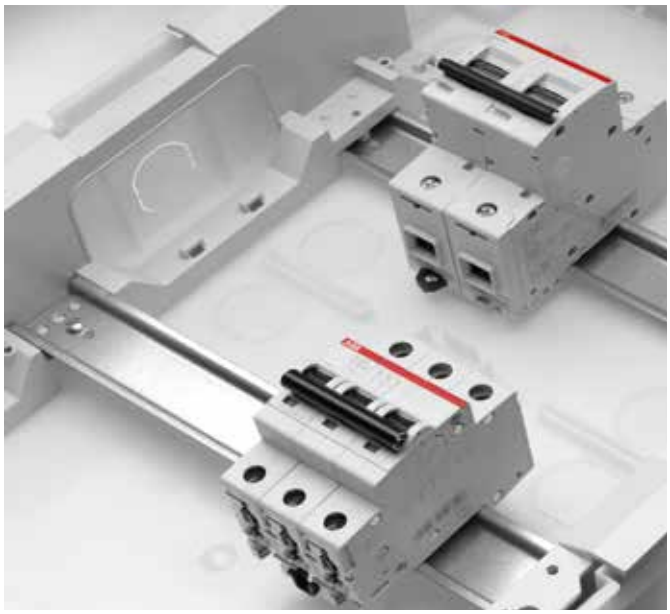
Endless installation possibilities



Horizontal coupling
The consumer units can be coupled side by side with the horizontal junction unit accessory, protecting the passage of cables between adjacent units.

Mortar guard
All versions include a mortar guard that prevents mortar sprays inside the consumer unit.

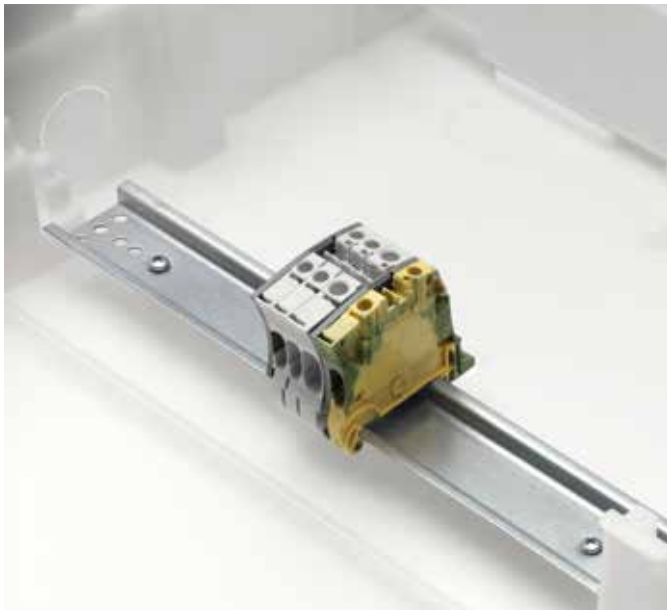
Dual-function accessory
A single accessory performs a dual function. It can be used to fix pipes to the unit's housing or to vertically couple two consumer units.



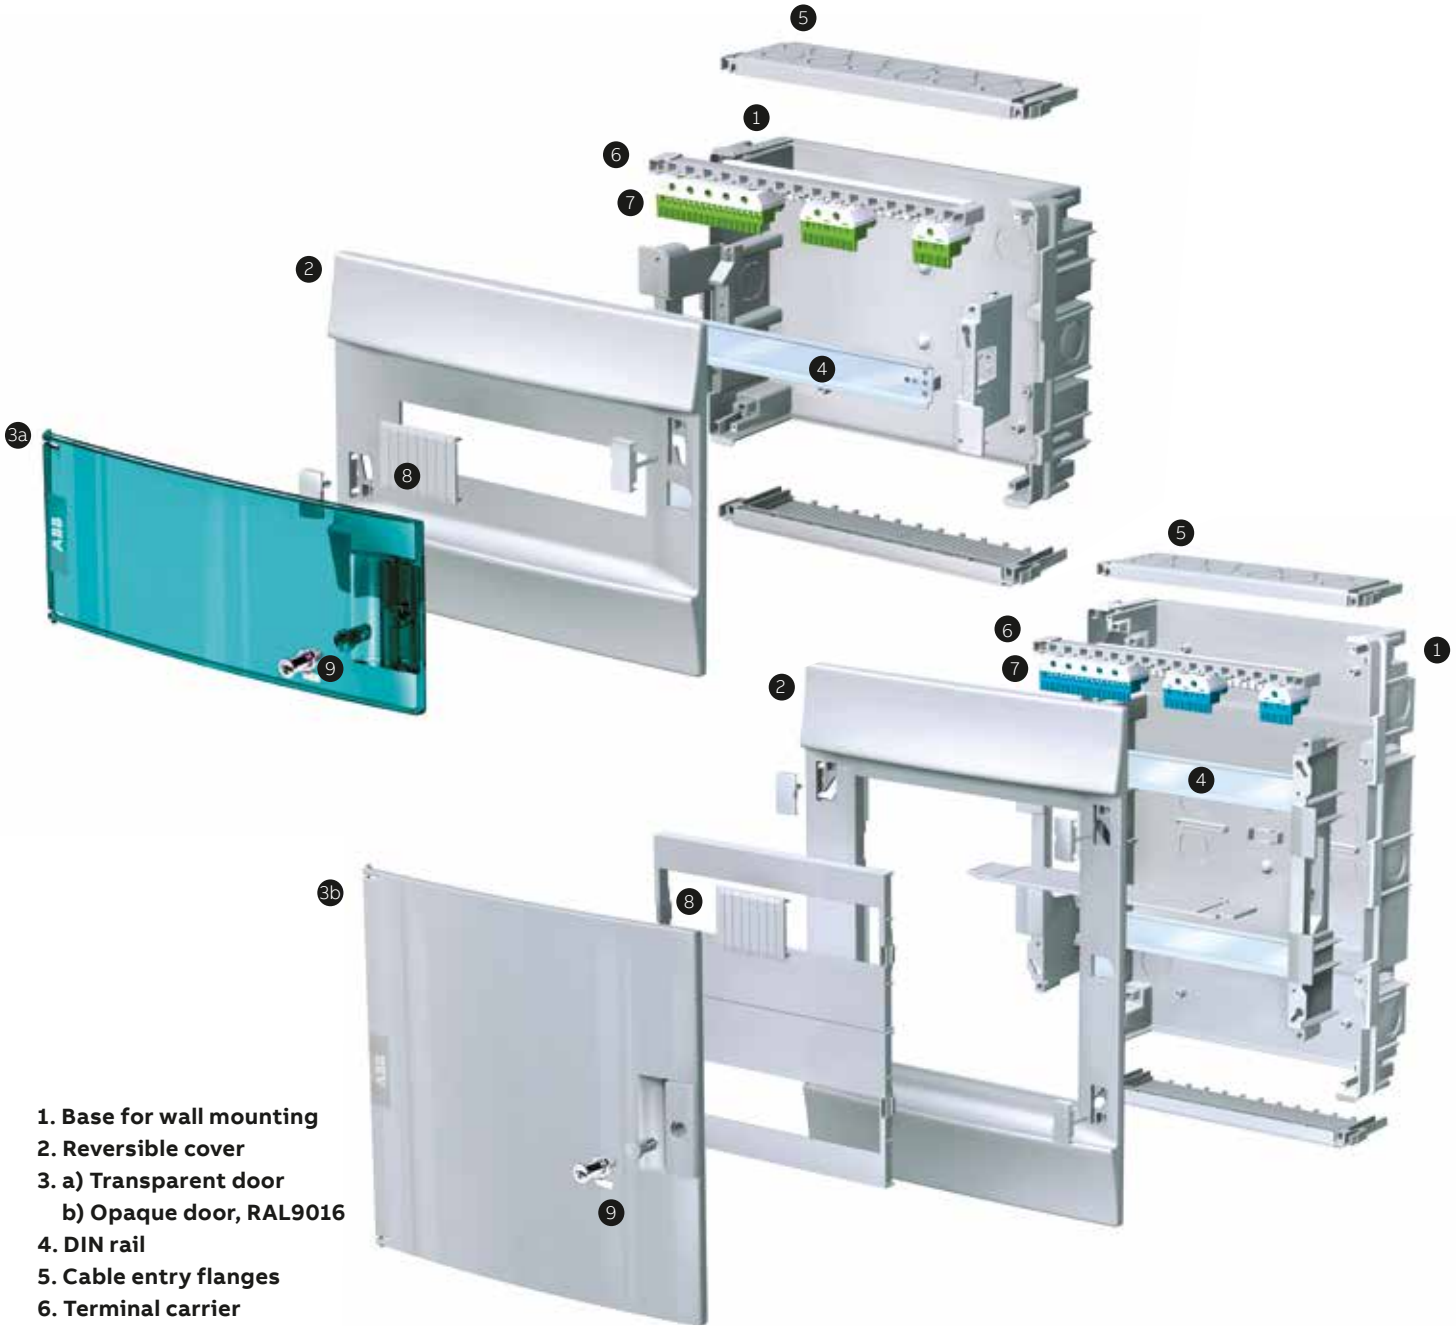
Internal partition
The horizontal partition allows the interior of the unit to be divided into two parts.

Endless installation possibilities

Flanges
The flange with multi pre-cuts is designed to be sheared only where necessary in order to ensure a more secure fastening. The removable flange with knockout holes ensure a reliable and safe placing of flexible pipes and other conduits, especially in plasterboard installation.



Two DIN rail positions
The extraxtable frame offers two DIN rail positions so devices of different depths, like S200 or S800 miniature circuit breakers, can be installed in perfect alignment.

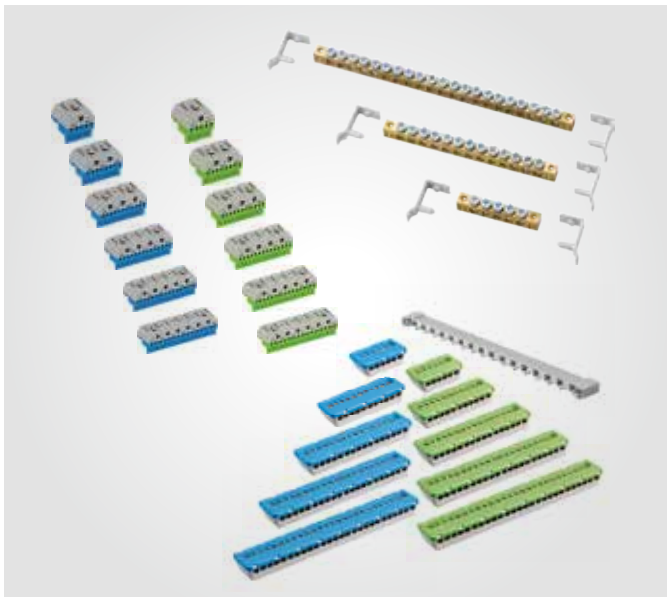


Captive screw covers
Screw covers are hooked to the front panel so they can be removed without the risk of losing them.

DIN rail terminals
It is possible to install an extra DIN rail at the bottom of the consumer unit.

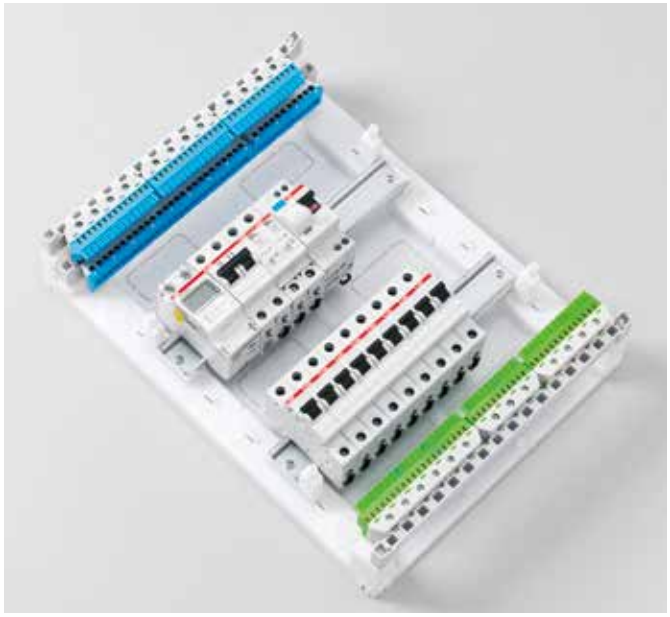
A versatile range suitable for every application

The simple construction of the MISTRAL41F series makes the units fast and easy to assemble. What is more, the flexible design allows easy adaptation to various application requirements.



1. Base for wall mounting
2. Reversible cover
3. a) Transparent door
   b) Opaque door, RAL9016
4. DIN rail
5. Cable entry flanges
6. Terminal carrier
7. Quick coupling terminal blocks
8. Module cover
9. Finish or closure element (optional lock)

A versatile range suitable for every application



Horiziontal levelling
The external adjustments of the front cover assure a perfect horizontal levelling even if the consumer unit is slightly crooked.

3 different terminal systems available
The MISTRAL range of consumer units is supplied with a wide range of terminal systems: Terminal bars with screws and the two versions of terminal blocks offering screw or screwless couplings.

Hollow wall mounting
For the hollow wall mounting our consumer units provide a special enclosure and hollow mounting screws.

Fast and tidy cabling
Both versions of terminal blocks can be installed on the terminal carriers on the upper and lower part of the unit. They are available in the colors green and blue.

MISTRAL41W
Wall-mounted series

The MISTRAL41W series of consumer units gives installers the freedom and flexibility to implement any type of electrical distribution system in residential buildings. This wide range of wall-mounted, IP41-rated units has been designed from scratch to enhance the unique features that make ABB the leading industry standard.

The units are fast and easy to install and look great anywhere thanks to their elegant design. Furthermore, ample internal space, a choice of doors and a unified range of accessories offer endless possibilities to create high-quality work installers can be proud of.

Fast and easy to be installed. Design and simplicity “all in one”.

Multimedia version for integration of internet routers, antenna or voice splitters.

Door available in two versions: petrol blue and opaque. Units without doors are also available.

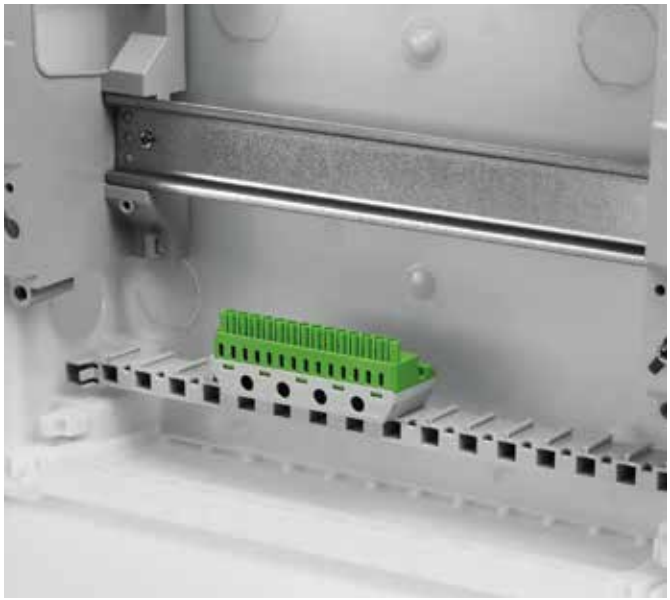
Door opens up to 180° allowing full access to theinterior of the unit.

Concealed rear mounts for secure wall installation.

The symmetrical design allows opening of the reversible door either from the left or from the right.

Endless installation possibilities

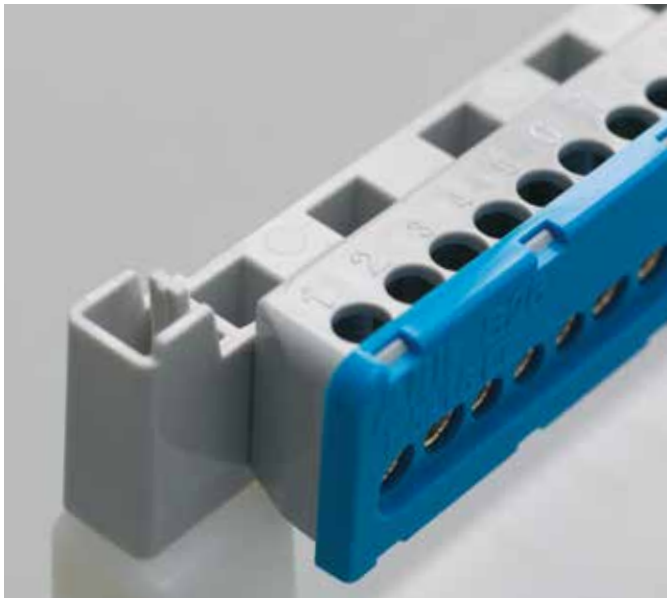
Invisible cable entry and exit
Pre-cut knockout slots allow cable entry and exit from the top and bottom. When not used, the slots remain invisible on the outside maintaining the consumer unit's sleek look and feel.



More than enough internal space
Lots of internal space makes cabling even easier. Cable clips and holes allow wires to be fastened to the frame with simple cable ties.

Easy installation of extra modules
An extra module can be added by removing two pre-cut elements. This offers a quick and easy solution when unexpected additional installation is required.

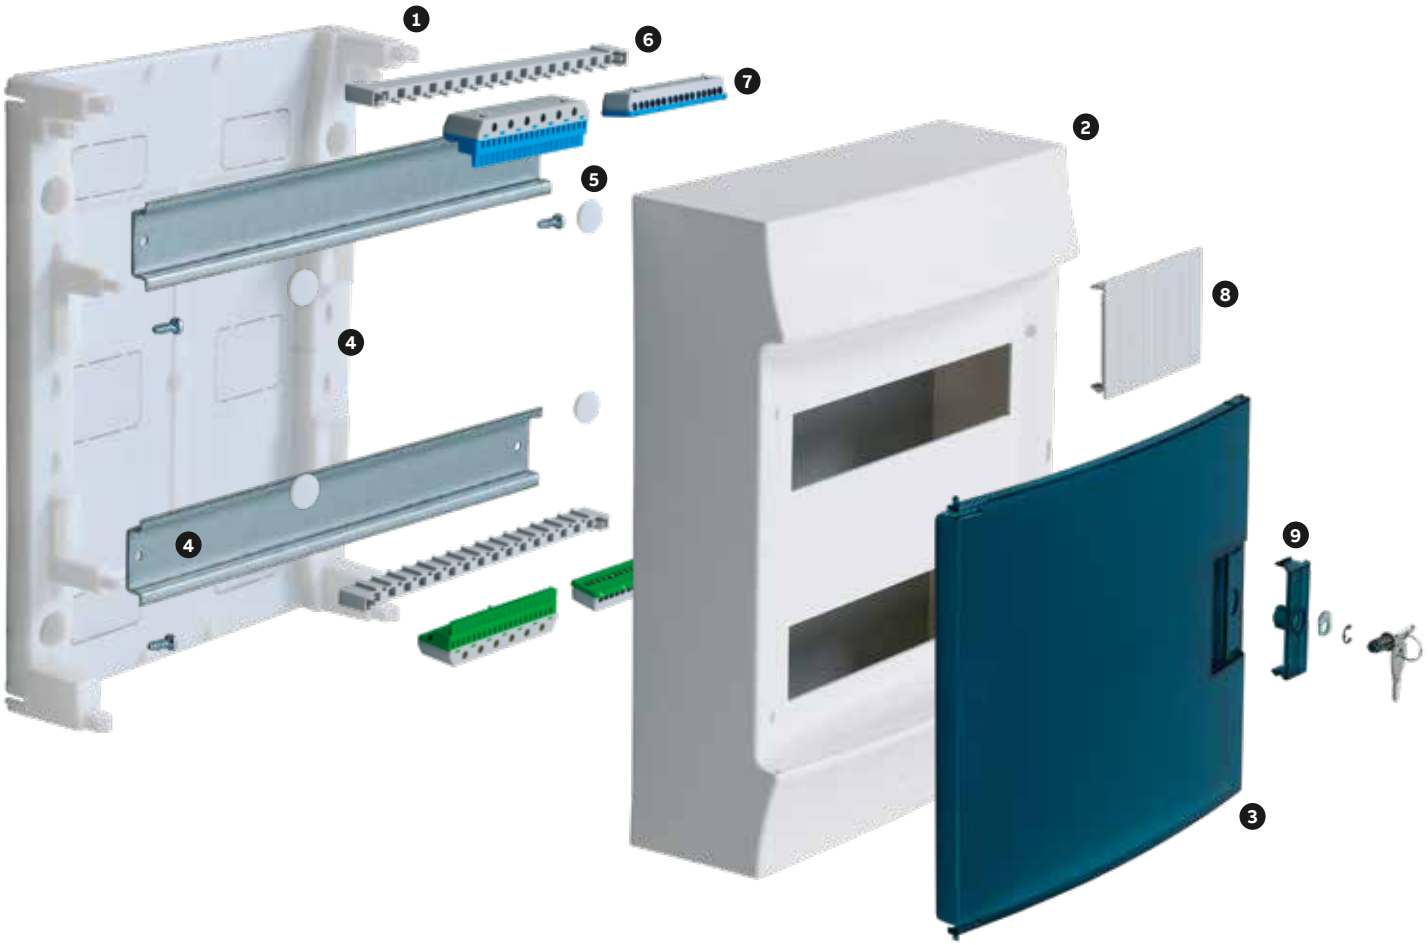
Terminal blocks – screwless version
Time-saving installation thanks to the snap-on system of the screwless terminal blocks which can simply be plugged into the terminal carriers.



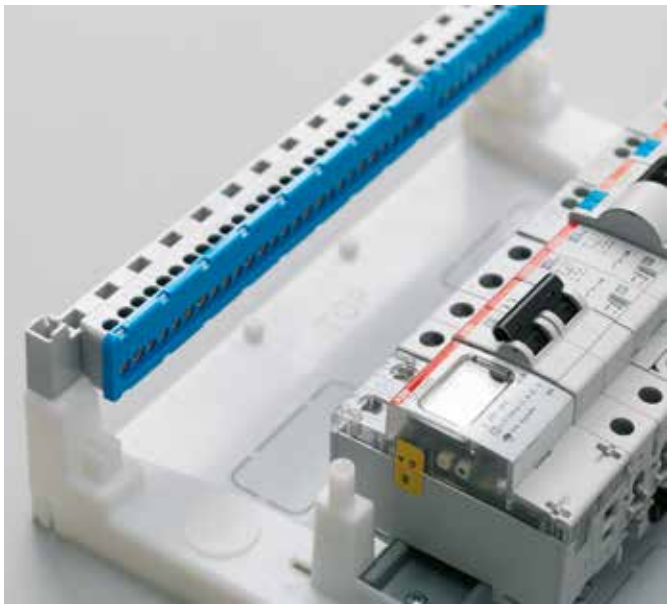
Endless installation possibilities

Double insulation protection
The unit housing and all accessories have been designed and developed to ensure Class II double insulation protection.

Multi-row units
Multi-row units are available with a standard distance of 125 mm between DIN rails.

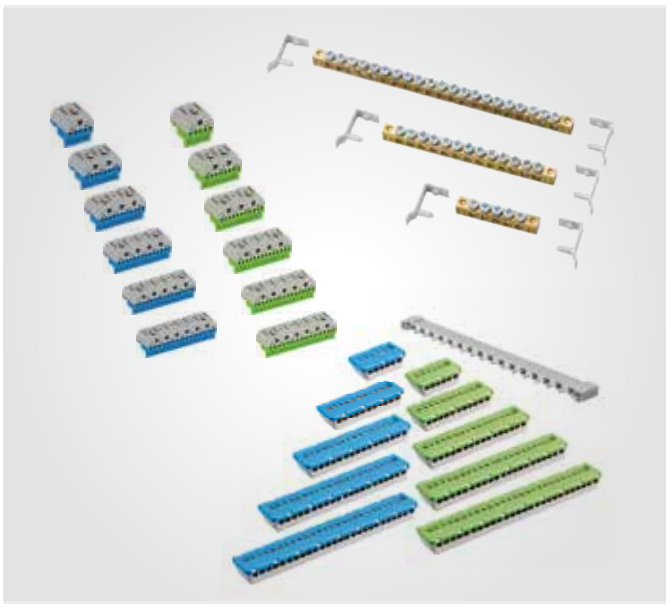


Terminal blocks – screw version
Within the flexible modular concept the new terminal blocks both screw and screwless versions ensure easy and effective cabling up to 63A or 100A.



Optional door lock
The standard door with ergonomic handle is available with a lock for additional security.

A versatile range suitable for every application



The simple construction of the MISTRAL41W series makes the units fast and easy to assemble. Furthermore, they can be easily adapted to various application requirements thanks to their flexible design.

1. Base for wall mounting
2. Reversible cover
3. Transparent door
4. DIN rail
5. Plugs, protection class II
6. Terminal carrier
7. Quick coupling terminal blocks
8. Module cover
9. Finish or closure element (optional lock)

A unified range of products
The MISTRAL41W series is compatible with a unified range of ABB products. As a result, terminal blocks, circuit breakers, switches, surge protective devices and many other components can all be installed in the units for a wide variety of applications.

3 different terminal systems available
Choose from a range of terminal bars or two versions of terminal blocks for precise configurations responding to individual requirements thanks to the flexible modular concept.

You can find all additional information, technical details and service offers on the ABB website whenever you need them. If you miss some information or need additional support you can also contact your local ABB retailer or ABB sales representative. They would be happy to assist you.

MISTRAL Multimedia
Easy installation for media equipment

Suitable for all kinds of walls
Available for brick walls, flush and hollow wall mounting, with drilled metal base plates always included.

MISTRAL family feeling
MISTRAL Multimedia as enriching addition to the product family.

Neat cabling
The complete installation materials in one place.

Just snap the router on
The device carrier (rubber) makes it easy to assembly internet routers without any additional tools (snap on trap).

Easy connection to different power supplies
Triple socket, 120° swiveling and to fit all sorts of plugs.

Versatile connections
Patch-panels to host RJ45 keystone jacks.

Notes

MISTRAL65

A versatile range suitable for every application

Efficiency, safety, integration: the new MISTRAL65 series rests on the strengths which have consolidated ABB's image over the years for its expertise and reliability in the area of products for protection, control, monitoring, measurement, safety and energy efficiency. These innovative IP65 rated consumer units complete ABB's wide product range for the residential, commercial and industrial sector.

The range includes solutions with transparent or opaque doors which open up to 180°, and a choice of between 4 and 72 modules, meeting the most recent regulatory requirements and ensuring an enormous variety of application types.

Designed for harsh environments
The MISTRAL65 consumer units come with IP65 protection degree, providing a dust-tight and resistant to jetting water resistance.

Mechanical strength of the MISTRAL65 consumer units are IK09 (10 joule) and IK08 for the precut parts.

Eco-compatible materials
Innovating today does not just mean looking for functional and technologically advanced solutions. For ABB, being innovative means embracing a longer-term perspective by using eco-compatible materials for our products which respect the environment even at the end of their life cycle. For this reason, 100% recyclable, in case of MISTRAL65 even halogen-free, thermoplastics have been used for the consumer units.

Their environmental compatibility has been assessed using the Life Cycle Assessment (LCA) method, an objective tool for analysing energy and environmental impact which analyses the energy and materials used and the emissions released during production.

MISTRAL65H:
Consumer units and switchboards for smarter outdoor installations

Resistance to salt, dust or UV rays is an essential feature in outdoor applications. Saline environments, chemical industries, sandy/dusty or PV applications require specifically robust products to guarantee reliable distribution of energy to where it is required.

IP65 IK10

Made for harsh environments and outdoor installations
The MISTRAL65H consumer units and switchboards are self-extinguishing and resistant to abnormal heat and fire up to 750°C (GWT). They provide shock resistance IK10 (20 Joules) and IP65 degree of protection.

Available in 4 sizes and with a wide range of accessories the MISTRAL65H enclosures have been specifically designed for heavy duty environments.

Certified robustness
The new MISTRAL65H consumer units and switchboards are perfectly suitable for heavy duty environments and outdoor installations as they have been tested and certified for:

- Dust/sand resistance (factory internal tested)
- Saline environments (according to IEC 60068-2-52)
- Weathering (according to IEC 600068-2-5)
- Permanent sun exposure (IEC 600068-2-5)
- Self-extinguishing and resistant to abnormal heat and fire up to 750°C (GWT)
- Shock resistance: IK10 (20 Joules)
- Degree of protection: IP65
- Opaque and transparent doors
- Common accessories with the MISTRAL65 standard range

MISTRAL65 / 65H

Fast and easy installation of consumer units

The project design also aimed to optimise cabling, assembly and installation times of the consumer units. Everything has been designed to make the installer's job quicker and easier, allowing them to implement functional and tidy consumer units.

MISTRAL65 / 65H
Fast and easy installation of consumer units

In the multi-row versions, the centre distance of the DIN rails can be varied from 150 mm to 125 mm, further increasing the versatility of the product and using the same standard accessories. The frame is extractable for quick and easy bench cabling.

The ample internal space makes the cables more accessible, facilitating cabling and giving the possibility to anchor the cable-ties to special eyeholes on the frame.

The consumer units are designed to house optional dedicated terminal blocks in two different color schemes to allow quick and tidy cabling, and making separate power supplies easily recognisable, when used.

The range is completely coordinated with ABB MCBs and MCCBs, all of which can be easily installed simply by moving the rail provided for their housing.

01 **Variable distance of the DIN rails,** 125 mm and 150 mm.
—
02 **Withdrawable frame, adjustable DIN rail depth** to ease the installation of any DIN device.
—
03 **Fast and easy installation** using wall fixing brackets.

MISTRAL65 / 65H

Design and simplicity “all in one”.

The refined design is marked by some particular characteristics, for example the perfect symmetry, which allows either the whole consumer unit or just the front panel to be rotated, easily changing the door opening side.

The minimalistic simplicity of the new design combines technological reliability with the most innovative aesthetic trends

The 180° door opening facilitates total accessibility to the interior of the consumer unit

The decorative texture of the door underlines the attention to detail and the quality of the finish

Door available in two versions: petrol blue and opaque.

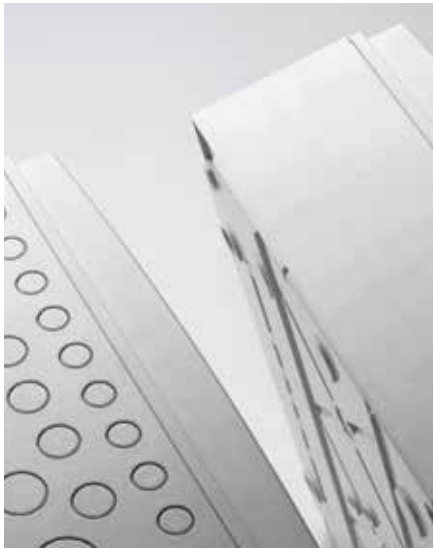
The symmetrical design allows opening of the reversible door either from the left or from the right.

The door has an ergonomic handle with snap-on closing or a lock (optional)

MISTRAL65 / 65H

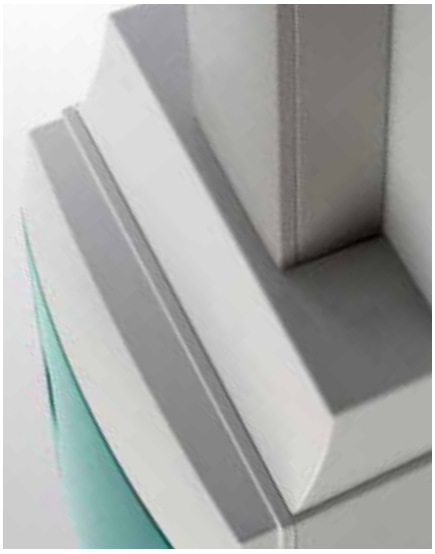
Design and simplicity “all in one”.

MISTRAL65 is equipped with smooth surfaces on top and bottom sides. Knockouts are available on both sides of the enclosure.



Interior slots allow the consumer unit to be fixed to the wall in points which are not visible from the outside, thus contributing to an aesthetically clean installation. Special snap-in closure plugs guarantee protection class II (double insulated).

The possibility to add an additional module by removing two pre-trimmed elements is an extremely useful solution which allows additions to be managed easily and tidily when unforeseen installation requirements are called for.



Mistral65H is equipped on one side with knockouts for cable glands, the other side with a smooth surface.

The standard door with ergonomic handle and snap-on closure can be equipped with a lock and key on request, ensuring only authorised persons have access and avoiding tampering or incorrect operations.

An accessory for trunking entry can be positioned at the top or bottom of the consumer unit, connecting and protecting the conductor bundles. A series of internal knockouts allows it to house any type of trunking.

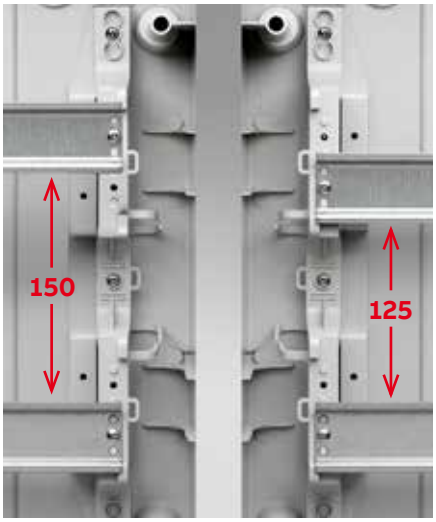
MISTRAL65 / 65H
For simplicity and effectiveness

Practical rear brackets provide practical and stable wall fastening

Every front panel is supplied with captive screws, giving practical and safety advantages

The side knockouts offer additional possibilities for the cables' path

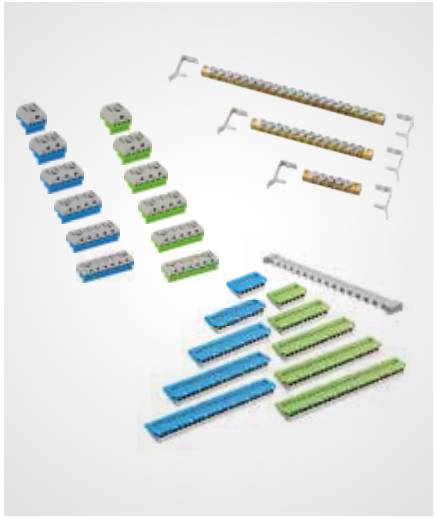
The dual gasket on the front panel ensures an improved seal



All accessories and the slightest details have been designed and developed in order to maintain double insulation properties at all times

MISTRAL65 / 65H
For simplicity and effectiveness

The extractable frame simplifies and speeds up bench cabling operations. The slotted holes in the frame allow it to be quickly fixed inside the enclosure.



In order to create space at the top or bottom of the consumer unit, the centre distance of the DIN rails can be modified from the standard distance of 150 mm to 125 mm. The closure panels, which are completely reversible, can be unhooked, reversed and reinstalled with a simple click.

Spaces have been created inside the consumer units to make cabling even easier, with cable clips and holes for fastening the conductors to the frame with simple cable-ties.

3 different terminal systems available
The MISTRAL range of consumer units is supplied with a wide range of terminal systems: Terminal bars with screws and the two versions of terminal blocks offering screw or screwless couplings.

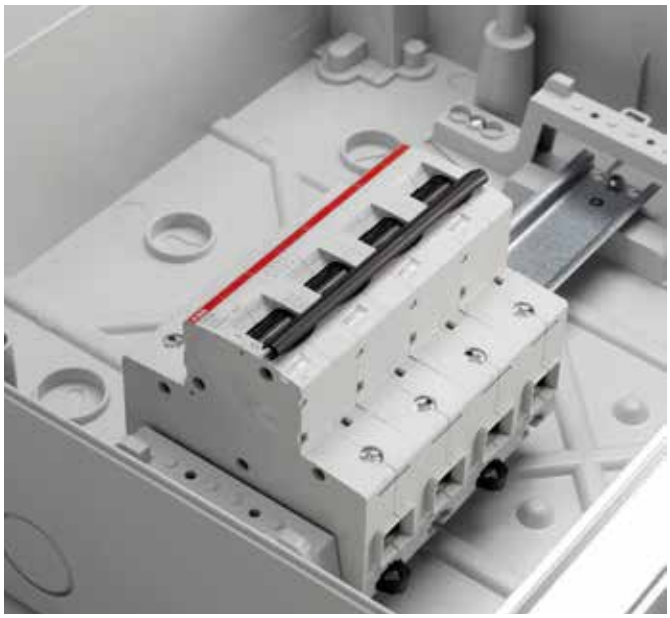
The consumer units can be installed side by side, with cable gland accessories protecting the conductors' path between adjacent units.

The accessories include blind panels and base plates allowing installation of other types of devices aside from modular DIN rail products such as contactors, manual motor starters or devices on the front of the panel.

MISTRAL65 / 65H
Endless installation possibilities

Our product development was inspired by the objective of allowing a wide range of products and solutions with different functions and dimensions to be installed in a single IP65 consumer unit, thus meeting the widest range of needs even in small commercial or industrial applications.

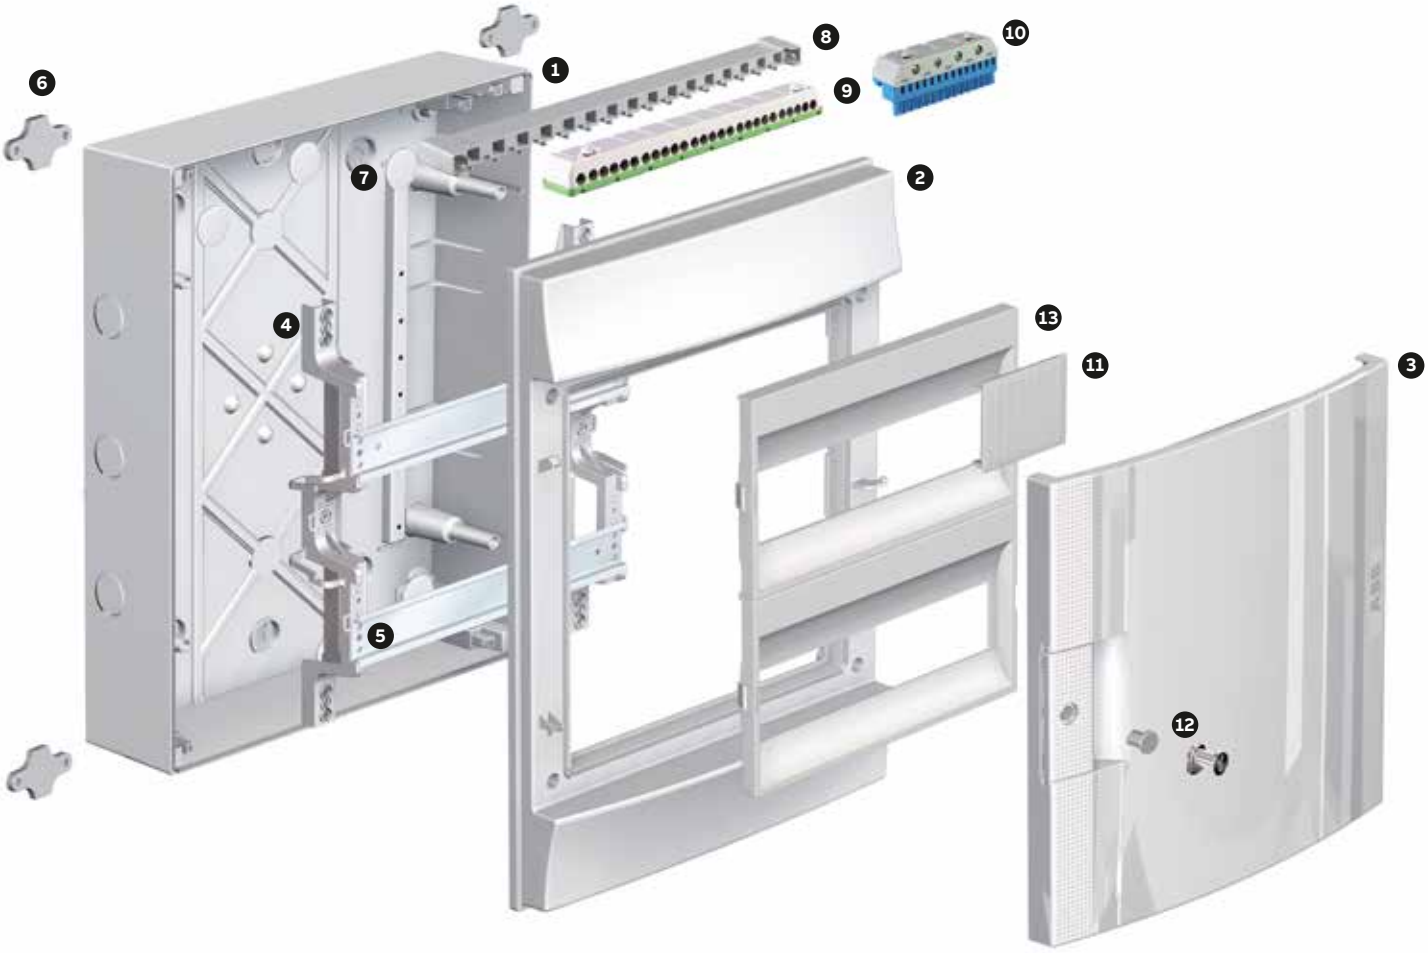
MCBs, MCCBs and devices installed in the front of the panel in an integrated, rational and functionally appropriate position.



MISTRAL65 / 65H
Endless installation possibilities

The frame allows for two different DIN rail positions. This allows products with different depths to be installed, for example MCCBs which, thanks to this solution, are perfectly aligned with other devices in the panel

Among these components with greater depth dimensions which can benefit from this flexibility of the frame, we must remember high-performance MCBs with greater than standard depth.



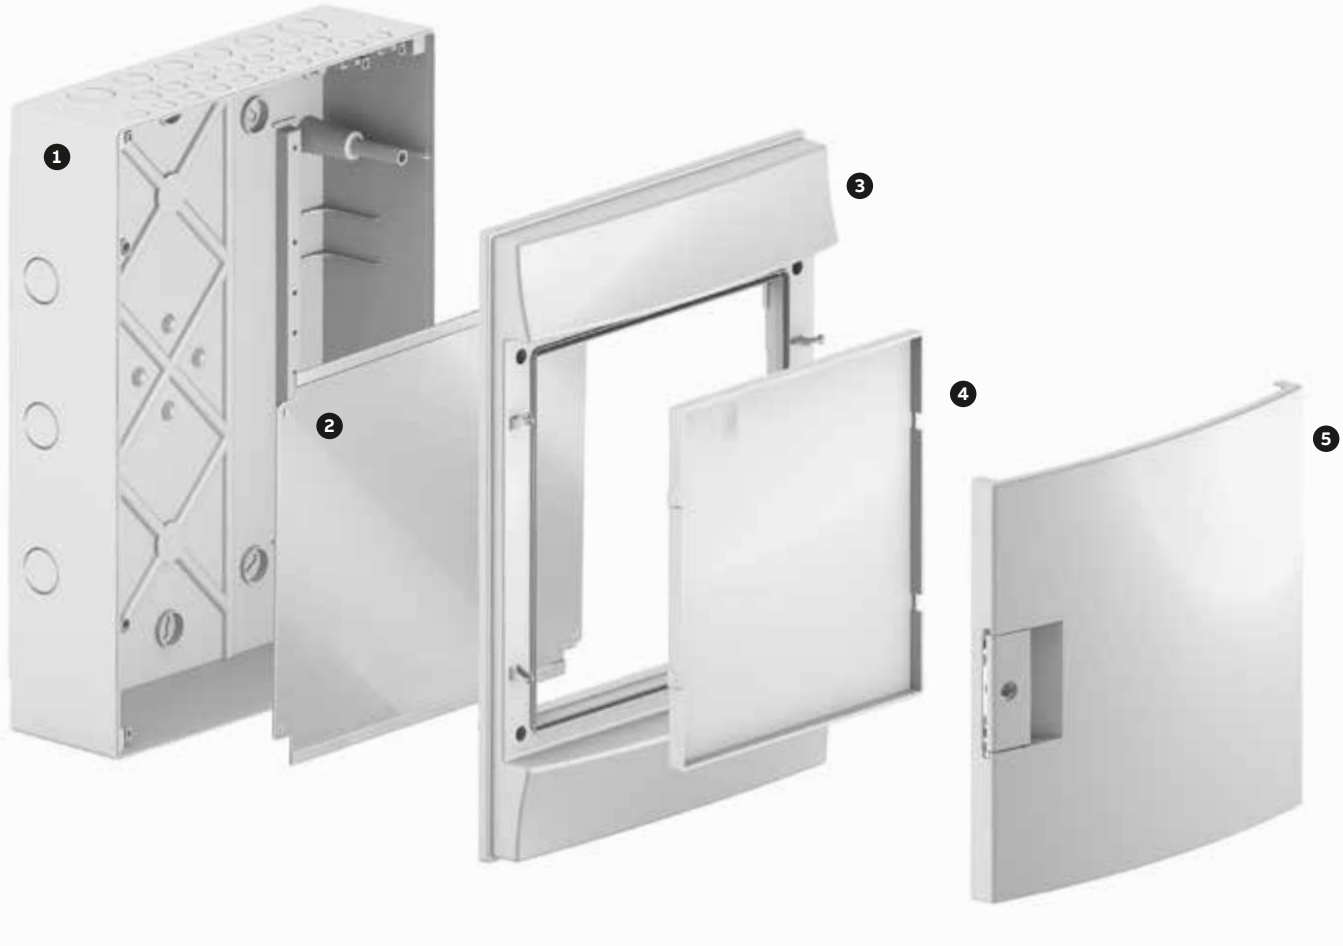
The first depth level allows standard products to be housed; these include most modular products currently available on the market.

Among the accessories, the availability of blank panels and base plates allows non-modular equipment to be installed on the front of the consumer unit, such as control buttons and indicator lights.

MISTRAL65 / 65H
All details at a glance

The simplicity of the consumer units makes adapting them to various system requirements easy.

Optional terminal blocks which can be installed in the top or bottom of the consumer unit allow the cabling to be performed in a tidy manner and their different colors facilitate recognition of any separate circuits.



1. Box for wall mounting
2. Reversible front panel
3. RAL 7035 opaque door
4. Fixed support for DIN rail
5. DIN rail
6. Wall fastening brackets
7. Plugs, protection class II
8. Terminal block carriers
9. Terminal blocks with screw coupling
10. Terminal blocks with screwless coupling
11. Module cover
12. Finish or closure elements (lock and key optional)
13. Reversible panels

MISTRAL65H Switchboard
All details at a glance

The switchboards consist of an empty box and a door to integrate all your interior fittings. A full closing panel is available (snap mounting), which works as an inner door in a typical automation application.

Specific metal plates designed to host Tmax XT MCCBs are available for all the enclosure sizes.

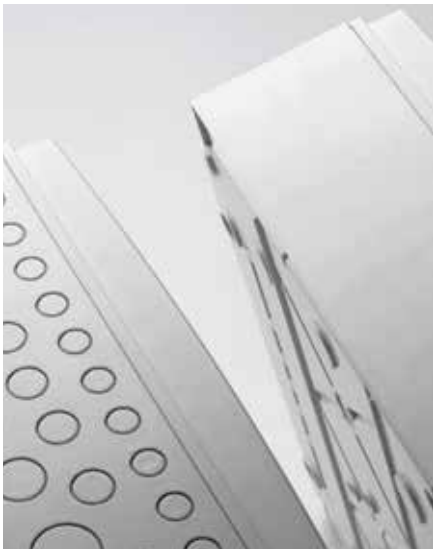
1. **Box for wall mounting**
2. **Metal plate**
3. **Reversible front panel**
4. **Inner door**
5. **RAL 7035 opaque door**

MISTRAL65H Switchboard
Harsh environment series

Smooth surface on one side, knock-outs for cable entries on the other

Every front panel is supplied with captive screws, giving practical and safety advantages

The perfect symmetry of the front allows the opening to be completely reversed



MISTRAL65H switchboards have been designed for heavy duty applications

MISTRAL65H Switchboard
Harsh environment series

Resistance to salt, dust and UV rays.

MISTRAL65H Switchboard is equipped on one side with knockouts for cable glands, the other side with a smooth surface.

Tmax XT kits are available to install XT1 and XT2 breakers.

MISTRAL65H switchboards offer a wide, safe space to integrate all your interior fittings.

Wide range of accessories.

Inner doors allow integration of signaling devices and push buttons for automation applications.

basic E consumer units

With basic E you find a complete assortment of high quality enclosures made for small and medium flats, multiple dwellings or office and administration buildings. They are available in different sizes, colors, wall and flush mounted versions with smart accessories. Efficient enclosures from basic E are used wherever power is metered and distributed. A diversity of applications and products from which you can only benefit with ABB.

basic E enclosures are available in 8 different sizes

Mini EUROPA40

Wall-mounting covers without door IP40

Available in white and grey and three different sizes to accommodate 2 to 6 modules.

The particularly robust and shock resistant frame ensures complete protection of the equipment installed.

The range is manufactured in accordance with the IEC 60670-24 standard.

Each cover is equipped with a DIN bar.

Mini EUROPA40
Wall-mounting covers without door IP40

This consumer unit without door reachs IP40.

The upper and lower walls include precuts on the internal side for the passing through of wiring trunking.

These covers can be opened from the front side to ensure easier access during installation.

Technical characteristics

Protection degree: IP40.
Colour: RAL 9016 red and RAL 7035 grey.
Material: manufactured in self-extinguishing thermoplastic resistant to abnormal heat and to fire up to 650°C (glow wire test), according to IEC 60695-2-11 standard.
Installation temperature: -25°C ÷ +60°C.
Shock resistant: 6 joule (with mounted circuit breakers).
Conformity: IEC 60670-24 certification.

IP 40 panel fronts

Technical characteristics
- protection degree **IP 40**
- in **thermoplastic**, self-extinguishing and resistant to abnormal heat and fire up to 650 °C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- available in **RAL 7035 grey**
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +85 °C in compliance with EN 60695-10-2 Standard
- fronts are supplied with:
  - module covers
  - instruction sheet

IP 55 panel fronts

Technical characteristics
- protection degree **IP 55**
- available with transparent, smoky horizontally hinged door in the version with lock and lead-sealable spring
- door designed to take a lock with coded key code 12 865
- available in **RAL 7035 grey**
- in **thermoplastic**, self-extinguishing and resistant to abnormal heat and fire up to 650 °C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +85 °C in compliance with EN 60695-10-2 Standard
- shock resistance 6 Joules
- fronts are supplied with:
  - module covers

General purpose enclosures

MultiBox - Small multi-purpose boxes for all types of application

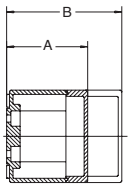
MultiBox

Applications

- Ideal for industrial automation and control, machinery and OEM.
- Electronic applications in the telecommunications industry.
- May also be used in tertiary and energy distribution applications.

Standard: EN/IEC 60670-22 (Polystyrene), EN/IEC 61439-2 (Polycarbonate)

Specifications and advantages



- 11 different sizes of box are available (from 65 x 65 mm up to 361 x 254 mm) plus 3 different cover heights.
- Material: polystyrene or polycarbonate reinforced with glass fiber.
- Color: RAL 7035 gray
- High protection rating, IP66-IK07 for polystyrene and IP66-IK08 for polycarbonate, thanks to the injected polyurethane gasket.
- Polycarbonate boxes are available with a smooth surface (one single entry) or with multiple metric cutouts.
- Polystyrene boxes are available with a smooth surface or with multiple metric cutouts.
- Opaque gray or transparent covers available in various heights.
- Designed for installation on all types of surface.
- Vertical and horizontal coupling.
- Polystyrene boxes (glow wire tested to 650°C) can withstand temperatures of up to +70°C, polycarbonate boxes (glow wire tested to 950°C) can withstand temperatures of up to +120°C.
- Total insulation ⧈.
- High level of resistance to chemical and aggressive environments.
- Halogen-free.
- Self-extinguishing (UL94-V2).
- Insulation voltage Ui = 1000 V

Why choose MultiBox?

Would you prefer a standard product or a custom one?
Or, would you prefer a “turnkey” solution (assembled/wired)?
ABB can offer you custom products and comprehensive solutions to meet your requirements!

- Boxes with hinged cover: types 3, 3R, 4, 4X, 6, 12 and 13
  Available upon request.

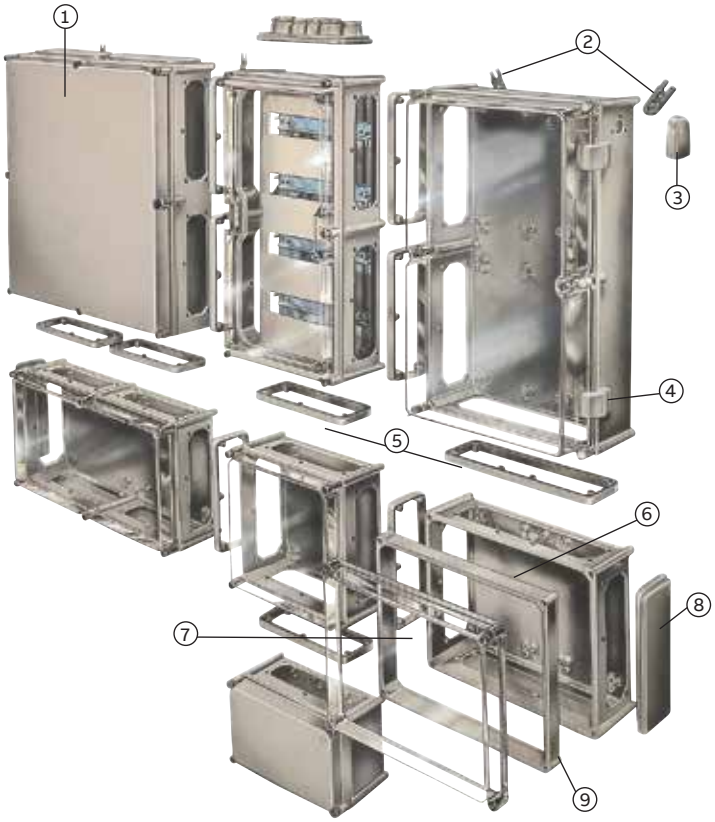
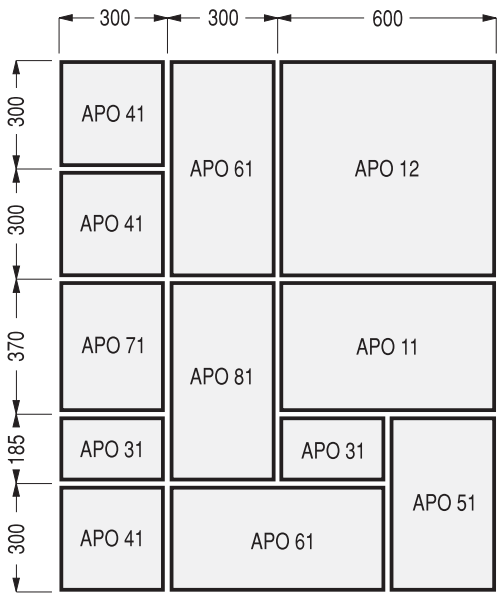
Lloyd's Register of Shipping



Specifications

- The range comprises nine different sizes with 300 and 185 mm modules.
- The base is fabricated from polyester, hot press molded and reinforced with glass fiber, dyed in mass RAL 7035 light gray color. It is equipped with M4 inserts (Dodge-type) for attaching a mounting plate or a frame.
- The cover may be fabricated from transparent polycarbonate or hot press molded polyester, reinforced with glass fiber, dyed in mass RAL 7035 light gray color.
- Maximum protection for the user and equipment thanks to its total insulation ⧈ and IP67 protection rating in accordance with EN/IEC 60529.
- IK08 protection rating against external mechanical impacts in accordance with EN/IEC 62208.
- Each box, which is a multiple of a smaller one, also has a variety of the mounting points of the smaller box. These points have non-threaded holes for embedded M4 inserts.
- The base also includes four to six non-threaded holes for embedded M6 inserts.
- The box may be wall-mounted or on a pedestal.
- Material is simple to work with using conventional tools such as drills, mills, saws, etc.
- Polyester boxes can resist temperatures of up to 70°C under continuous operation and peak temperatures of up to 130°C. The transparent polycarbonate covers can resist operating temperatures of up to 120°C.
- Insulation voltage Ui = 1000 V and 1500 V dc
- APO enclosures are UL Listed, in accordance with the UL Standard 508. They are also CSA-certified.

General purpose enclosures



APO - Modular polyester boxes

Modular insulated box system

1. Polyester cover
2. Fixing lugs, stainless steel or polyamide
3. Fan
4. Hinge made from insulating material
5. Coupling frame
6. Depth extension frame
7. Transparent polycarbonate cover
8. Solid polyester closure plate
9. Polyurethane gasket

Optimal modular application

Technical data

Protection classification in accordance with IEC 60529		
Polyester cabinets	with 100% polyester cover	IP67
	with transparent polycarbonate cover	IP66
	with hinged cover	IP67
Cabinet with rubber cable entry		IP43/54[2]
Cabinet combination(s)		IP67[1]
Cabinet with raised frame		IP66

(1) Depending on cover used
(2) IP54 if cable entry is mounted at the bottom of the cabinet.

Coupling frames			

Made of glass fiber-reinforced polyamide.
- Supplied with a template.
- The slimmest section of the frame must be mounted toward the front of the base.
- The maximum obtainable passage between two bases is that indicated by the template.

The required number of openings may be applied within this space.

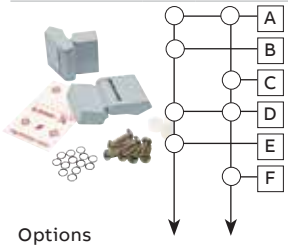
IP44 Vent			
Install 2 vents per enclosure for ventilation to prevent the formation of condensation. Supplied with a template and fixings. Recommended installation: one vent at the highest and lowest points on each side of the enclosure.			
  	Set of 2 polyamide pieces. RAL 7035		
	PS833677	4TBP833677C0100	1



Product	Type	Order code	Pack
Pedestal mounting			
- The C profiles are mounted directly to the rear of the base using the bosses provided. - The brackets may be distributed along the length of the C profile according to the width of the pedestal.			
 	Set of 2 C profiles and screws. For enclosure 300 and 370mm side.		
	APPM	4TBO890510C2100	1

Product	Type	Order code	Pack
Fixing lugs			
Set of 4 supports and screws, in glass fiber-reinforced polyamide.			
	- For external mounting points. - Direct mounting through the 4 corner holes of the enclosure. - If using depth extension frames, first attach the supports. - Max equipment weight: 100kg.		
	APMBPA	4TBO851266C0100	1
Set of 4 stainless supports and screws (304-type)			
	- For very severe operating conditions. - The 4 brackets are mounted directly onto the rear of the base in the section that is reinforced for this purpose. - Mounting by means of M4 threaded inserts (provided). - Max equipment weight: 100kg.

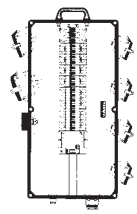
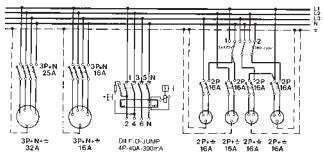
APO 61 - ▣ IP44-IK10 distribution enclosures





APO 61

- Made from polyester, self-extinguishing reinforced with glass fiber.
- Meet AREI requirements.
- Equipped with a circuit breaker for circuit protection.
- Also equipped with a 300 mA differential switch for general protection.
- Distribution cabinets are equipped with wall mounting lugs.
- Wired and equipped with a sufficiently sized entry.
- May be coupled to a meter enclosure.
- 3 x 230 V/3 x 400 V+N network inverter.
- Dimensions: 600 x 300 x 175mm

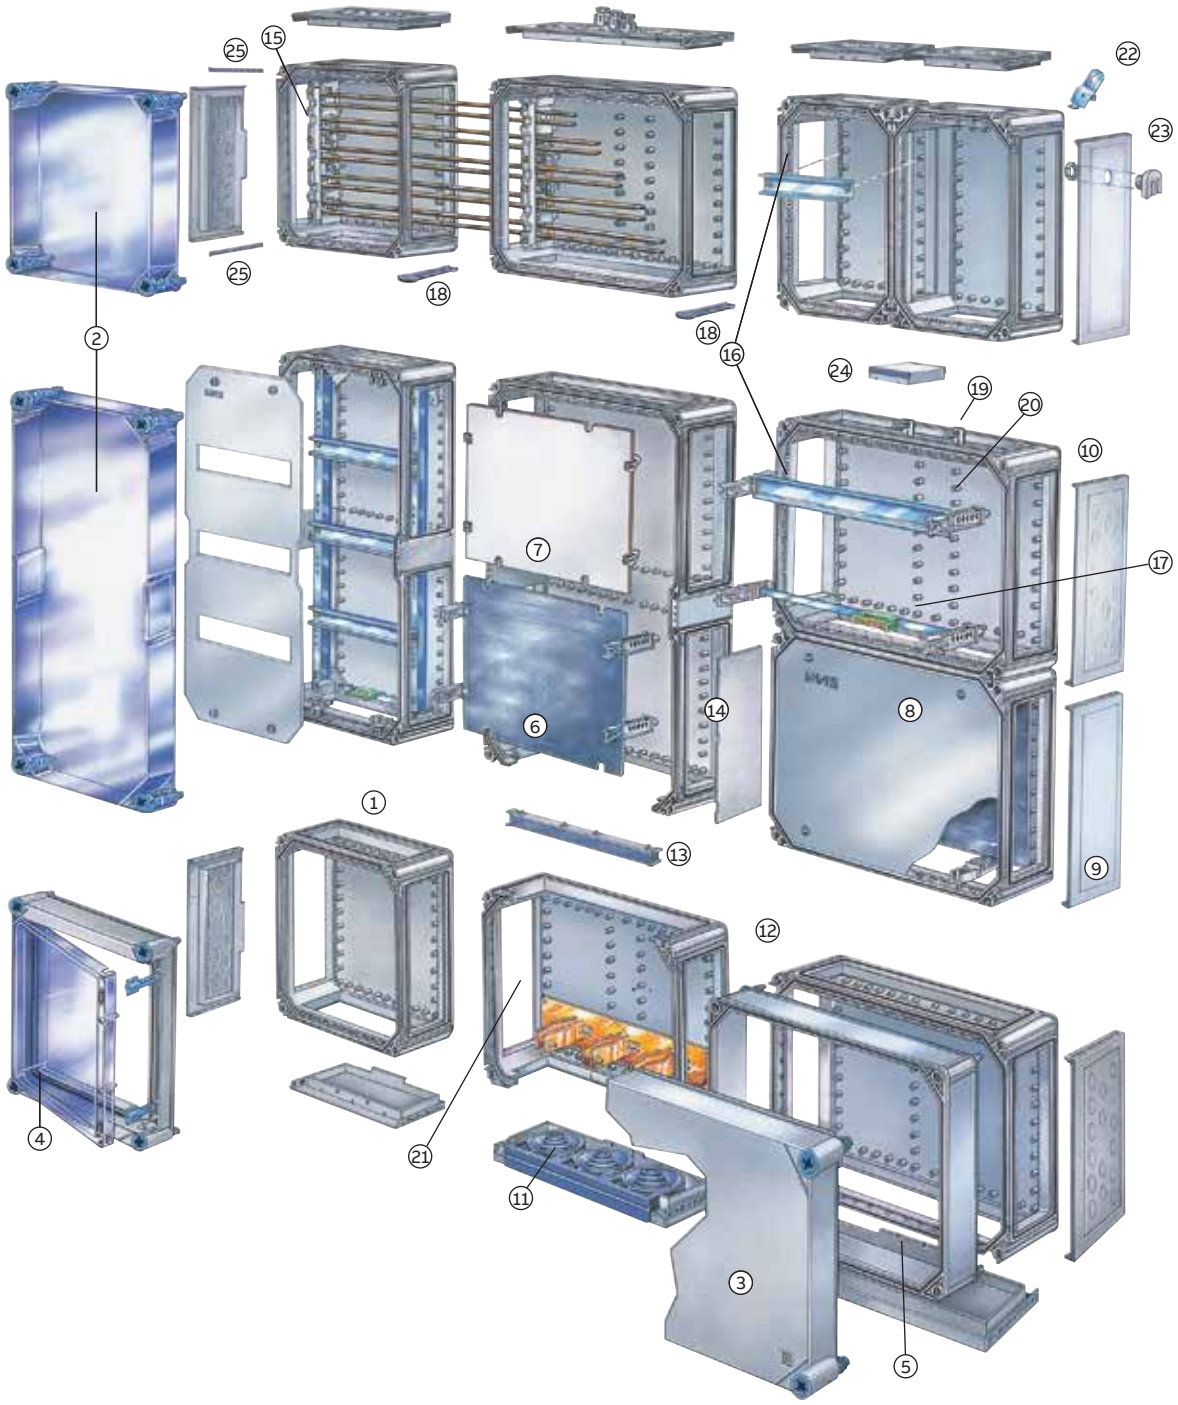
General purpose enclosures

VMS - Modular system

Applications

- Manufacturing
- Public works
- Controls for motors
- Electronic instrumentation
- Low-voltage distribution boards



Standard: EN / IEC 61439-2, EN / IEC 60529, EN / IEC 62208

Specifications

- The range comprises five base dimensions, multiples of the 100 mm module.
- The ingenious and unique coupling system makes assembly simple and quick, for any combination of enclosures without the need for any tooling.
- The open base affords excellent options for cabling and installation for the connection, even when already coupled.
- The open sides can easily be fitted with smooth walls or walls with cutouts without impacting the protection ratings.
- Each large base is a multiple of smaller bases. The equipment securing points are inset by 25 mm increments, at the top and bottom of the base.
- The base and the closure plates are made from glass fiber-reinforced polycarbonate, halogen-free, self-extinguishing, light gray dyed in the mass (RAL 7035) color. The cover is fabricated from transparent or light gray (RAL 7035) polycarbonate.
- A comprehensive range of closure and mounting plates meeting a wide range of requirements for all installations.
- VMS enclosures are halogen-free.
- Enclosures offer maximized protection to users and equipment thanks to their double insulation ⧈ and IP65 protection rating in accordance with the EN/IEC 60529 standard.

General purpose enclosures

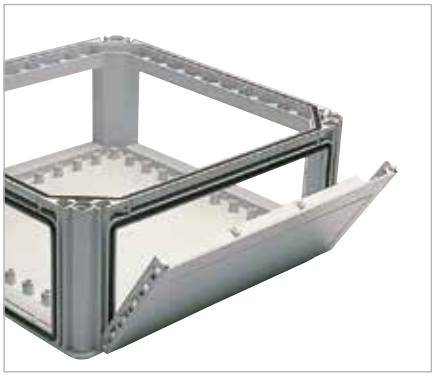
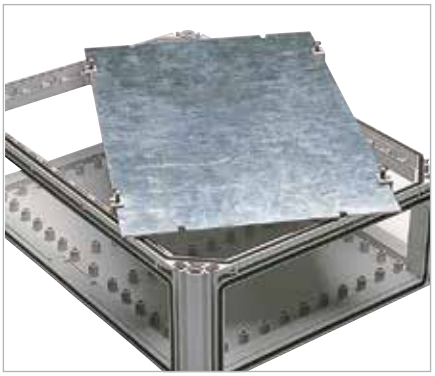
VMS - Features and benefits



Modular dimensions in increments of 100mm in height and width, available in five sizes:
320×220 mm 320×320 mm
440×320 mm 640×320 mm
640×440 mm

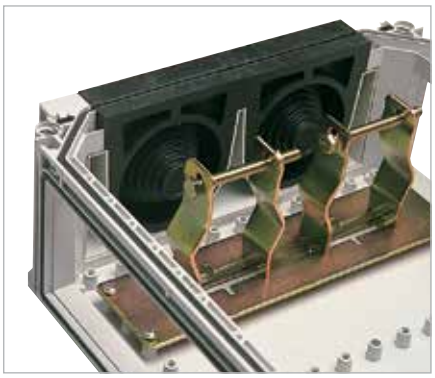
Assorted covers: transparent, opaque, or hinged; common design and depth.



Quick coupling thanks to the vertical dowels inserted into the four corner slots of the boxes.

Combi or blind plates are snapped on from the outside and fixed by means of vertically sunk keys at the front of the base.

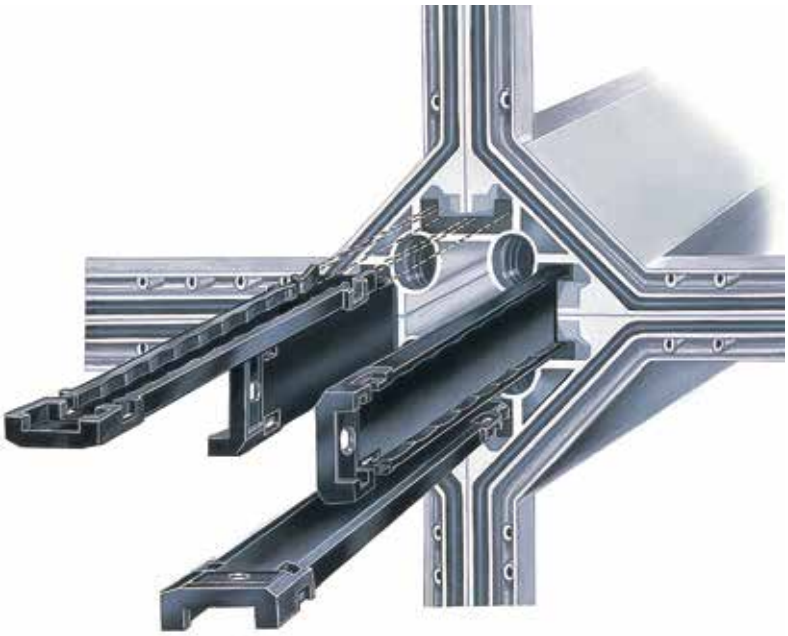
After installation, the end-plates fit perfectly into the side panels of the base.



Mounting plates (2 mm in metal or 5mm in insulating material (pertinax), with mounting accessories.

Universal support for screwless and depth adjustable installation of component rails. This universal support is simply clicked over the base.

Removable bridges facilitate the introduction of large-section cables. After connecting the cables, insert the bridges (320 and 440 mm sides).



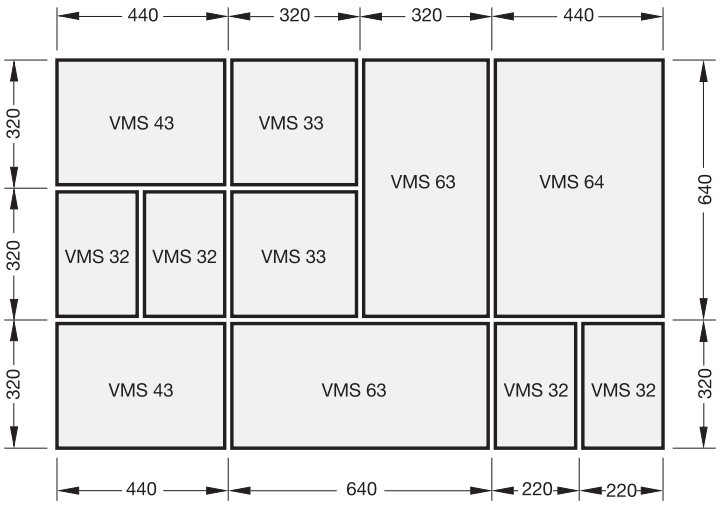
Universal cable entries and stress-relieving cable clamps to Ø 75 mm are attached to all base on side 320 mm (for 2 cables) and side 440 mm (for 3 cables).

General purpose enclosures

VMS - features and benefits

Vertical and horizontal stacking of enclosures
Enclosures are assembled using dowel pins mounted on the front end.
The dowel pins are universal for the entire range of VMS enclosures.

Installation of closure plates
After insertion from outside, the closure plate is locked in position by two dowel pins and pressed against the enclosure body join.



General purpose enclosures

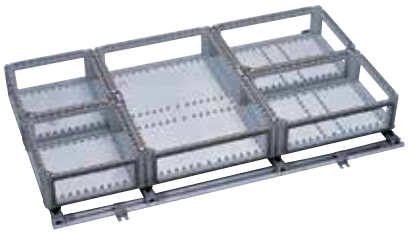
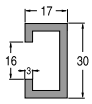
VMS - Supporting frame for wall mounting

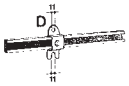
- Fixing small units onto the wall can be done using the stainless steel mounting brackets.
- To transport and fix units with more than five enclosures, the use of a frame is essential.
- The frame includes at least 2 horizontal C-profiles (of an equal length to the width of the unit) and vertical C-profiles (equal to the number of rows +1).
- If the unit exceeds a height of 1000mm, three horizontal C-profiles are required.
- The vertical C-profiles are 140mm longer than the height of the assembled panel.
- The frame and the unit are built simultaneously.

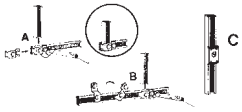


The horizontal and vertical C-profiles of the first row of enclosures are attached to each other by clamping brackets with sliding nuts. The following clamping brackets are mounted in the same way on the horizontal profile.



The following rows are mounted in the same way on the frame.





The first row of enclosures is then mounted on vertical profile with the clamping plates.

Frame and enclosure assemblies are mounted simultaneously.

s: thickness of the rectangular bar or cable-shoe or flat copper
x: minimum bolt length required
L: length of fitting hook bolt or bolt with rectangular head

General purpose enclosures

ARIA - Universal polyester enclosures

ARIA

Applications

- Manufacturing
- Breweries
- Steelworks
- Public works
- Petro-chemical industry
- Road signage
- Temporary connections
- Telecoms
- Solar energy applications

Standard: EN/IEC 61439-2, EN/IEC 60529, EN/IEC 62262, EN/IEC 62208

Standards/Certification

- UL types 3, 3R, 3S, 4, 4X, 12 and 13 Available upon request.

- CSA types 3, 3R, 3S, 4, 4X, 12 and 13 Available upon request.

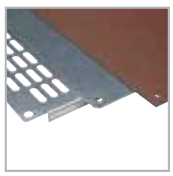
LR - Lloyd's Register of Shipping (IP66 versions with center lock)

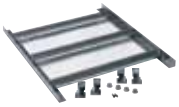
Specifications

- Seven different types, from 315 x 215 to 1035 x 835 mm.
- Enclosures made from light gray polyester (RAL 7035), hot press molded, glass fiber-reinforced, dyed in the mass.
- The enclosure is equipped with 4 threaded rods and 4 nuts for securing a mounting plate or frame and is equipped as standard with a double-bit key lock.
- Maximum protection for the user and equipment thanks to its total insulation ⧈ and IP65/66 protection rating in accordance with EN/IEC 62208 (IP54 for enclosures with inspection windows).
- IK08 protection rating against external mechanical impacts in accordance with EN/IEC 62208 (IK07 for cabinets with windows).
- Polyester boxes can resist temperatures of up to 70°C under continuous operation and peak temperatures of up to 130 °C.
- Self-extinguishing polyester, halogen-free.
- Insulation voltage U_i = 1000 V ac and 1500 V dc

General purpose enclosures

ARIA - Universal polyester enclosures





1. Monobloc base
2. Detachable door, left-hand or right-hand opening
3. No water stagnation on the seal
4. Mounting point in the door
5. Front plate:
   - polyester RAL 7035
   - hinged
   - detachable
   - stand-alone
   -sealable
   - quick installation
   3-point closure lock
6. Interchangeable cylinders
7. Individual connection busbars
8. Mounting frame:
   - removable
   - perforated
   - reinforced DIN rails
9. Integral hinges 180° pivoting door
10. Mounting plate
    - metal
    - pertinax
    - perforated
11. Mounts directly onto the wall or via external mounting lugs made from stainless or synthetic material

General purpose enclosures

PolySafe - Multi-function polyester enclosures

PolySafe

Standard: EN/IEC 60529, EN/IEC 61439-2, EN/IEC 62208, EN/IEC 62262

Specifications

- 16 standard dimensions (from 500 x 500 mm to 1250 x 1000 mm) with a depth of 320 mm.
- Enclosures supplied assembled (empty or equipped).
- IP55 and IP65 high protection ratings in accordance with EN/IEC 60529 and IK10 (20J) in accordance with EN/IEC 62262.
- Protection rating for enclosure with inspection window: IP54-IK07.
- Material: polyester reinforced with glass fiber, halogen-free, hot press molded and self-extinguishing.
- Color: RAL 7035 gray, dyed in the mass.
- Designed for wall, floor or pedestal mounting.
- Option of stacking vertically or horizontally widthwise or depthwise.
- Total insulation ⧈.
- 5-point door closure mechanism.
- Optional version on a DIN base.
- Insulation voltage Ui = 1000 V ac and 1500 V dc
- Product is easy to recycle: no molded metal parts.

Standards/Certification

- Single-door enclosure: type 3, 3R, 3S, 4, 4X, 12, 12K and 13
- Double-door enclosure: type 3R
- Coupled enclosures: type 3, 3R, 3S, 4, 4X, 12, 12K and 13 Available upon request.

LR - Lloyd's Register of Shipping

Conditions for use

Polyester boxes can withstand temperatures between -25°C et +70°C under continuous operation and peak temperatures of up to 130°C.

General purpose enclosures

PolySafe - Multi-function polyester enclosures

Applications

- Commercial
  Leisure (marketplaces, camps, leisure ports, attraction parks, etc.), gas stations, carwashes, laundromats, industrial laundries, construction site enclosures, etc.

- Industrial
  Ship building, mining, automobile industry, paper industry, sugar refinery, food industry, distilleries, petrochemical industry, heavy industry, processing, surveillance systems, etc.

- Utilities
  Water treatment sites, gray water processing. telecommunications, traffic signaling, traffic management, public transport, energy distribution (electricity, gas, water), cable television, public lighting, railways, etc.

General purpose enclosures

PolySafe - Universal polyester enclosures

Depth = 320 mm		PS 430
Factory-assembled enclosures Equipped with AISI 304 stainless steel fixing lugs and handle (lock not supplied)		
Dimensions (H x L)		1000 x 750
Enclosure with **IP55** solid door	**Type**	PS833204
	Order code	4TBP833204N0100
Enclosure with **IP65** solid door	**Type**	PS430P63
	Order code	4TBP833028C0100
Enclosure with **IP54** inspection window (polycarbonate inspection window)	**Type**	PS430T43
	Order code	4TBP833857C0100
Weight (kg)		30
IP65 depth extension kit For increasing the standard depth of the enclosure from 320 mm to 640 mm. The kit comprises 2 side panels, 1 upper panel, 1 lower panel, 2 rear open panels (frames).	**Type**	PS430D63
	Order code	4TBP833591C0100
Hoods Necessary if efficient (IP44) ventilation is required, includes drilled holes in the upper panel and the use of fins.	**Type**	PS300R03
	Order code	4TBP833568C0100
Base for ground installation The enclosure and base are anchored together into the ground. H = 65 mm	**Type**	PS200Z03
	Order code	4TBP833574C0100
The basic enclosure is IP65 rated, the hood is optional. If larger widths or depths are required, please contact us.		
Base for ground installation The enclosure and base are anchored together into the ground. H = 70 mm	**Type**	PS300Z03
	Order code	4TBP833575C0100
Adaptor frame for DIN-base mounting The enclosure and adaptation kit are anchored together onto the DIN socket (polyester)	**Type**	PS300A03
	Order code	4TBP833582C0100
DIN base Polyester - RAL 7035	**Type**	EH3SE1EI
	Order code	4TBE843206R0100
Mounting plates Dimensions (H - 110 mm x L - 110 mm)		
2 mm Sendzimir galvanized sheet metal	**Type**	PS430M03
	Order code	4TBP833504C0100
Pertinax 5 mm	**Type**	PS430I03
	Order code	4TBP833512C0100
Pertinax 10mm	**Type**	-

General purpose enclosures

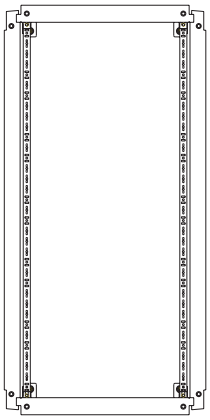
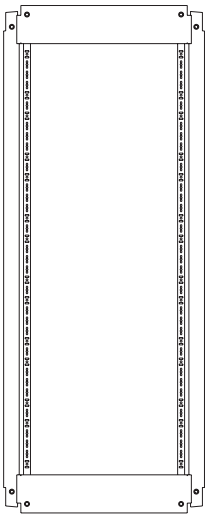
PolySafe - Modular framework for DIN-rail equipment - IP20





Supplied as a self-assembly kit
Kit contains:
- 2 x support for left-hand vertical profile
- 2 x support for right-hand vertical profile
- 2 x vertical profiles
- 2 x IP20 insulated vertical profiles
- 2 x IP20 insulated horizontal profiles
- assembly accessories

Notes

General purpose enclosures

Accessories - Heater units

Function
Small heaters for electrical enclosures are important accessories for ensuring the operational safety of control and distribution assemblies.
They are essentially used to prevent the formation of condensation or to ensure that a minimum temperature is maintained inside the electrical enclosures, i.e. at a few degrees above ambient temperature.

Operating principle
The small heaters are equipped with PTC heating resistors (semiconductors with a positive temperature coefficient). The self-regulating and self-limiting semiconductor heating elements maintain a constant temperature over the heating surface of the small heaters. The aluminum body transfers heat to the surrounding air through natural radiation. Special extruded profiles guarantee perfect heat radiation.

Calculation model for determining the power requirement
According to the formula: **$P = A \times \Delta T \times k$**

P = power to be supplied via the resistor (W)
A = exterior free surface of the enclosure (m^2)
ΔT = temperature difference between the interior temperature after heating and the exterior temperature in °K.
k = thermal radiation coefficient:
steel: 5.5 W/m^2K
polyester: 3.5 W/m^2K

Rule of thumb: recommended value 100 W/m^3 of enclosure volume. The calorific value must be doubled for an exterior installation. Multiple small heaters are preferable to a single heater unit.

Advantages
- Energy efficiency
- Dynamic heating
- Self-regulating
- Self-limiting
- Quick clip-in fitting
- Zero maintenance
- Long service life
- Compact unit

Standards
EN 60335-1 / EN 62233
UL
EAC

Applications
Electrical enclosures, instrumentation units, display panels, control cabinets,
ATM machines, access control system for parking lots, etc.

Installation
Quick installation on 35 mm DIN rail (EN 50 022).
Recommended installation in the lower section of the enclosure, at least 40 mm from the equipment itself.

General purpose enclosures

Accessories - Heater units

CSK 060

CS 060

CSF 060

CSK 060

Small heating resistor for compact boxes and enclosures, to prevent the formation of condensation or temperatures below a minimum threshold. The resistors have been designed for permanent use.

CS 060 / CSF 060

Compact heating resistor to regulate the temperature of cabinets and enclosures containing electrical and electronic components. Due to its construction, it produces optimized natural convection, which generates an effective flow of hot air. The plastic casing has been designed so that the surface temperature remains low. The heating resistor is equipped by default with a fixed-range thermostat. The thermostat connects directly to the heating resistor and requires no additional wiring. The resistors have been designed for permanent use. The resistor is also available as a version without a thermostat (CS 060 series).

Technical specifications

Nominal voltage	120-240 V(1) AC/DC (min. 110 V, max. 265 V)
Heating element	PTC resistor, self-regulating
Surface temperature	< +85°C (+185°F) (in accordance with VDE 0100), except for the protective grille
Connection	2.5 mm² 2-pole terminal, max. tightening torque 0.8 Nm
Box	plastic material in accordance with UL94 V-0, black
Attachment	clip for 35 mm DIN rail, EN 60715
Installation	vertical air flow (blowing upwards/connection below)
Operating/storage temperature	-45 to +70°C (-49 to +158°F)
Operating/storage humidity	max. 90% RH (condensation-free)
Protection rating	IP20/class II (double insulation)
Certification	VDE, UL, EAC
Note:	other voltage options upon request

(1) For power supplies below 140 V AC/DC, heat production is reduced by 10%.

General purpose enclosures

Accessories - Heaters

CS 028 / CSL 028

Heating resistor for maintaining a constant temperature inside the enclosures. Prevents malfunctions due to the formation of condensation or ice. Connection via an internal terminal. Thanks to their reduced dimensions, the CS 028 and CSL 028 heating resistors are ideal for installation in enclosures and cabinets with restricted space.

Technical specifications

Heating element	PTC resistor, self-regulating
Surface temperature	150 W/250 W: max. +50°C (+122°F), 400 W: max. 65°C (149°F), with the exception of the upper protective grille, for an ambient temperature of +20°C (+68°F)
Axial fan, with ball bearing roller bearing	air flow rate, unimpeded blowing, CS 028: 13.8 m^3/h, CSL 028: 45 m^3/h (230 V AC), 54 m^3/h (120 V AC), life cycle 40,000 h at +40 °C (+104°F)
Connection	2.5 mm^2 2-pole terminal (CSL 028 with cable gland), max. tightening torque 0.8 Nm
Box	plastic material in accordance with UL94 V-0, black
Attachment	clip for 35 mm DIN rail, EN 60715 or screw attachment (Ø 5.3 mm)
Installation	vertical air flow (blowing upwards)
Operating/storage temperature	-45 to +70°C (-49 to +158°F)
Operating/storage humidity	max. 90% RH (condensation-free)
Certification	IP20/class II (double insulation)
Directives	file no. UL E150057 (in accordance with UL 508A, NITW file upon request), EAC, 230 V only: VDE

General purpose enclosures

Accessories - Heaters

CSF 028

Compact blown-air heating resistor to maintain a constant temperature inside cabinets and enclosures containing electrical and electronic components. Prevents the formation of condensation or ice. Thanks to their reduced dimensions and anti-touch casing, this heating resistor is ideal for installation in enclosures and cabinets with restricted space. CSF 028 is equipped with a pre-set thermostat. Connection via external terminals. The resistor may be installed in two ways: by threaded bracket or by clip. Mounting by threaded bracket is highly robust and is particularly suitable for applications subjected to strong vibration.

Technical specifications

Heating element	PTC resistor, self-regulating
Surface temperature	250 W: max. +50°C (+122°F), 400 W: max. +65°C (+149°F) m.u.v. bovenliggend roosteroppervlak bij +20°C (+68°F) omgevingstemperatuur
Temperature limiter	prevents any overheating in the event of fan failure, automatic reactivation
Axial fan, with ball bearing roller bearing	air flow rate, unimpeded blowing, CSF 028: 45 m^3/h (230 V AC), 54 m^3/h (120 V AC), life cycle 40,000 h at +40 °C (+104°F)
Connection	2.5 mm^2 double 2-pole spring terminal for solid cable or 1.5 mm^2 for multi-strand wire with terminal connectors
Box	plastic material in accordance with UL94 V-0, black
Attachment	clip for 35 mm DIN rail, EN 60715 or screw attachment (Ø 5.5 mm), max. tightening torque 2 Nm, washers recommended
Installation	vertical air flow (blowing upwards) and horizontal
Dimensions	model with clip/screw attachment: 105 x 85 x 118 mm
Weight	model with clip/screw attachment: 0.5 kg
Operating/storage temperature	+40 to +70°C (-40 to +158°F) / -45 to +70°C (-49 to +158°F)
Operating/storage humidity	max. 90% RH (condensation-free)
Usage classification	IP20/class II (total insulation)
Certification	VDE, UL File No. E150057, EAC

General purpose enclosures

Accessories - Heaters

HVI 030 without fan

HVI 030

Compact heating resistor to regulate the temperature of cabinets and enclosures containing electrical and electronic components. Prevents malfunctions due to the formation of condensation or ice. The heating resistor may only be used in combination with a fan, but it is also available without an axial fan (self-installation). Choice of screw-attachment model or new rotary clip secured model. The latter is simple and quick to fit.

Technical specifications

Nominal voltage	230 V AC, 50 / 60 Hz
Heating element	hoogwaardig verwarmingspatroon
Temperature limiter	prevents any overheating in the event of fan failure, automatic reactivation, additional protection via an irreversible fuse
Axial fan, with ball bearing roller bearing	air flow rate of 150 m^3/h, unimpeded air flow life cycle 50,000 h at +25 °C (+77°F)
Connection	2.5 mm^2 double 3-pole spring terminal for solid cable or 1.5 mm^2 for multi-strand wire with terminal connectors
Box	plastic material in accordance with UL94 V-0, black
Attachment	rotary clip for 35 mm DIN rail, EN 60715
Installation	vertical air flow (blowing upwards)
Dimensions (H x W x D)	169 x 127 x 89 mm
Weight	1.3 kg approximately
Operating temperature	VDE: -10 to +50°C (+14 to +122°F) / UL: -10 to +40°C (+14 to +104°F)
Storage temperature	-45 to +70°C (-49 to +158°F)
Operating/storage humidity	max. 90% RH (condensation-free)
Protection rating	IP20/heating: class II (double insulation), fan: class I (grounded)
Certification	VDE, UL File No. E234324, EAC
Directives	other heating outputs and voltages available upon request

Important instruction: only use resistors with a fan (min. 150 m^3/h).
Risk of overheating!

Heating
Fan, cooling element, alarm signal

Function

FZK 011, ZR 011 and ETR 011 elements regulate and control the temperature inside the enclosure by controlling the small heaters, fans, heat exchangers and cooling units.

FZK 011

Mechanical thermostat used for controlling heating resistors, air conditioning units, filter fans or signaling. It obtains ambient temperature readings and can switch resistive and inductive loads thanks to its snap switching.

ZR 011

Two thermostats in one unit:

- thermostat (contact normally closed) for heating resistor regulation.;
- thermostat (contact normally open) for regulating filter fans, heat exchangers and air conditioning units or for triggering signals when the temperature threshold is exceeded.

Unlike a thermostat with inverter switch, the dual thermostat allows the heating resistor and air conditioning unit to be connected independently at different temperature ranges.

ETR 011

The mechanical thermostat is used for controlling heating resistors, air conditioning units, filter fans or signaling. The thermostat obtains ambient temperature readings and can switch resistive and inductive loads thanks to its inverter switch (relay). The LED integral to the adjustment button lights up when the contact is closed (when the heating resistor is in operation, for example).

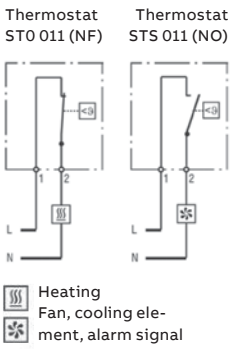
FTS 011

Function

The mechanical thermostat is a dual switch with low hysteresis. The thumb wheel is for anti-icing adjustment. The casing ensures optimal air circulation around the bimetallic element.

STO 011

Thermostat (contact normally closed) for heating resistor regulation. The contact is opened when the temperature increases.



STS 011

Thermostat (contact normally open) for regulating filter fans, heat exchangers and air conditioning units or for triggering signals when the temperature threshold is exceeded. The contact is closed when the temperature increases.

Technical specifications

Type	
Hysteresis	4 K (±3 K tolerance)
Heat sensor	with bimetal element
Contact type	snap switching
Life cycle	> 100,000 cycles
Power	250 V AC, 10 (2) A 120 V AC, 15 (2) A 30 W DC on 24 V DC to 72 V DC
Max. start-up current	16 A AC for 10 s
Connection	2-pole terminal, max. tightening torque 1 Nm: 2.5 mm² flexible/solid cable (AWG 14)
Attachment	clip for 35 mm DIN rail, EN 60715
Box	plastic material UL94 V-0, light gray
Dimensions	70 x 33 x 42 mm
Weight	50 g approximately
Installation	mandatory
Operating/storage temperature	-45 to +80°C (-49 to +176°F)
Operating/storage humidity	max. 90% RH (condensation-free)
Protection rating	IP20
Certification	VDE, UL File No. E164102, EAC

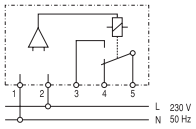
ETF 012

The hygrostat/thermostat measures both temperature and humidity, and is able to activate heating or cooling independently.



Technical specifications

Adjustment range:	
- Temperature	0°C to 60°C
- Hysteresis	2K
- Relative humidity of the air	50% to 90%
- Rest time	160 secs.
Power supply voltage	100-240 V / 50-60 Hz
Contact type	relay output: NO/NF switch
Power output(1)	8 A (4) 250 V AC 0.5 A 100 V DC 8 A 12 V DC 5 A 35 V DC
On/Off indicator	LED
Weight	140 g
Dimensions (H x W x D)	50 x 67 x 43 mm
Protection rating	IP20
Connection	2.5 mm^2 screw-in terminals
Attachment	35 mm DIN rail(EN 50022)
Box	plastic UL 94 V0
Anti-interference	N in accordance with VDE 0875

(1) Values between parentheses: inductive load cos φ = 0.80

The humidity regulator is designed to control the temperature and air humidity inside the enclosure. The regulator is activated when the humidity level reaches 65%. In doing so, the system efficiently prevents the risk of condensation and corrosion.

Technical specifications

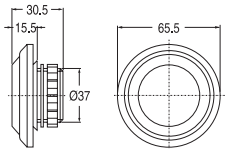
Accessories - Passive cabinet ventilation

The differences between ambient temperature and the temperature inside a cabinet with a high protection rating may generate variations in pressure. In the event of under-pressure, the cabinet may draw in dust and moisture. Any moisture trapped inside the cabinet will be deposited as condensation. This condensation can be prevented through the use of ventilation grilles.



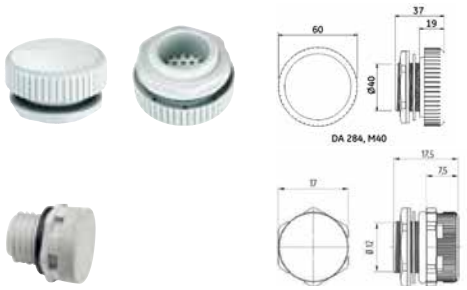
Product	Type	Order code	Pack
IP44 ventilation grille			
Suitable for a ventilation opening Includes 2 grilles and 4 nylon nails. Total insulation.			
			
2000 mm² grille	PS832019	4TBP832019C0100	1
			
3000 mm² grille	PS832743	4TBP832743C0100	1
			
4500 mm² grille	PS832744	4TBP832744C0100	1
			

Product	Type	Order code	Pack
IP44 vent (RAL 7035)			
In order to guarantee sufficient ventilation and to avoid condensation, two vents must be installed; one at the top and a second one at the bottom. Kit includes: drilling template.			
Set of 2 polyamide pieces	PS833677	4TBP833677C0100	1
  			

Product	Type	Order code	Pack
Vents (IPx4)			
Improve ventilation and prevent condensation. Recommended installation above or below the cabinet - M20			
	MB861728	4TBG861728R0100	25
			

Product	Type	Order code	Pack
IP55 pressure compensation plug			
Hermetically sealed cabinets and enclosures are subjected to thermal or exterior influences, which result in temperature fluctuations during changes in pressure. Pressure compensation plugs compensate for changes in pressure and prevent the ingress of dust and moisture. The plug is suitable for use in electrical cabinets and enclosures, in accordance with the DIN EN 62208 standard.			
Set of 2 pieces	ACC818078	4TBJ818078R0100	1

Technical specifications	
Dimensions	ø 65.5 mm x 30.5 mm
Cut-out	ø 37 mm
Attachment	PG 29 threaded or nut
Material	ABS/PC
Air inlet	±1.5 cm²
Protection rating	IP55
Note:	compensation for optimal pressure revolves around the use of 2 plugs, diagonally opposed. If the plug is not installed vertically, the protection rating is reduced to IP54.



Product	Type	Order code	Pack
Vents - IP44[1]			
Set of 2 pieces, bore diameter Ø 34.9 mm	AR831009	4TBA831009C0100	1
			

(1) If positioned in the corners of an Aria cabinet or under the hood of a PolySafe cabinet

(1) DIN 46.277

Notes

Gemini: the improved range
Robust and flexible thermoplastic enclosures

Six different box sizes with internal space which accomodates from 24 to 216 DIN modules

Opaque or transparent doors, opening at more than 180°.

A single handle operates the door closing mechanism and it can be ordered separately.

Gemini is compliant to IEC62208 and UL 508A standards. IP66 certifies Gemini is completely protected against the infiltration of solid bodies and is resistant to the penetration of jets of water similar to sea waves.

High resistance: flexible and extremely sturdy. Resistant to harsh environments, chemical and atmospheric agents.

Suitable for outdoor installations, in any operating conditions: IP66, IK10, GWT=750°C, -25°C to 100°C

Easy to install

Ready-to-use solutions are available to quickly install all the devices without using tools.

High degree of protection

Extremely sturdy, even against 20 joules impact, dust and water jets (IK10 and IP66 degree of protection), able to operate in a wide range of temperatures (25 up to 100°C), exceptionally resistant to UV and chemical agents and compliant with IEC 62208 and UL 508A standards.

Adaptable to customers' requirements

Available in 6 sizes and with transparent or blind door, with full metal and plastic base plates. Gemini can be used even in very difficult application circumstances and extreme weather conditions.

Eco-friendly

Thanks to co-injection technology, Gemini's thermoplastic not only ensures sturdiness, mechanical features and resistance to oils but it also reduces at the same time the environmental impact at the end of its useful life since it's 100% recyclable.

The thermoplastic co-injection molding process

It's like a "sandwich" of two materials: a compact external covering and an expanded core.
This technology ensures the highest level of mechanical protection against impacts (IK10) .

Easy to install

Versatile and simple. To meet any application.

Offering the best technology for more reliable energy distribution solutions, by protecting people, equipments and resources.

ABB's Gemini enclosures provide a real system of integrated and complementary functions making them configurable into different applications: for automation, distribution and combined automation and distribution.

Gemini is designed to be perfectly compatible with ABB components for low voltage control and monitoring. In mixed applications, the Gemini enclosure is designed to be fitted with System pro M modular devices and Tmax XT moulded-case circuit breakers. To respect safety standards, all the enclosure components are easy to fit and can be fixed to the base plate or to the box frame without using any tools.
Wiring operations are carried out from the front followed by snapping the base plate or the distribution frame onto the box.
The patented frame is fitted with the cable duct incorporated in the uprights.

—

Gemini is also flexible thanks to six different box sizes and internal space to accommodate from 24 to 216 DIN modules.

For control and command applications, three typologies of base plates are available: standard metal, perforated metal and insulated.

Lightweight thermoplastic material makes handling operation easier compared to traditional enclosure, for easier handling.

- Few parts: **snap-on fixing**, **no tools needed**
- **Pre-assembled hinges**
- Door with **180 degree rotation**
- Frame with **integrated vertical wiring duct**
- Frontal cabling: **comfort in the wiring process**
- **A wide range of accessories for automation and distribution applications**

—
01 Gemini doors open at an angle of more than 180° giving easy access to the devices installed inside the switchboard.

—
02 No tools are needed for installation. The doors hook onto the hinges with special hinge pins and are reversible.

—
03 The frame can be extracted to make wiring operations easier at the workbench.

—
04 The fixing hooks supplied in the standard versions are applied without having to use tools.

—
05 Fixing hooks and feet allow the frame to be snap-mounted inside the box.

High degree of protection
Designed to operate in harsh environments

Gemini is developed and designed by ABB together with the direct collaboration of panel builders, installers and designers in order to create insulating enclosures to better face extreme weather conditions.

Gemini represents the best solution for both distribution and automation (control and command) applications.

For a valid enclosure, the degree of protection is an important factor. Gemini thermoplastic enclosures are totally protected against the infiltration of solid bodies thanks to an IP66 degree of protection (IP30 with the door open and with the appropriate components installed) and a double insulation, even in the event of indirect contact.

—

They are suitable for environments with extreme temperatures, in outdoor applications and severe conditions.

Thermoplastic material retains its characteristics for a long time since it's not subject to corrosion from chemical and atmospheric agents such as dust and sand. In Mining or Construction applications as well as manufacturing plants, Gemini withstands harsh chemicals with high levels of performance.

Typical examples of some Gemini applications can be seen in Manufacturing sites, Solar power plants, greenhouses, chemical plants and in any other environments where distribution and automation demand specific safety requirements and service continuity.

It is particularly recommended in photovoltaic and greenhouse applications, also because of its strong resistance to UV rays.

- **IP66 degree of protection** (IP30 with the door open and with the appropriate components installed)
- **Double insulation from dust and water jets**, even in the event of indirect contact
- Adaptation to environments with extremely high or low temperatures **(-25°C to 100°C)**, in outdoor applications and in severe conditions
- **Resistance to aggressive chemical agents and UV radiation**
- Resistance to fire and abnormal heat **(GWT up to 750°C)**.
- Insulation Voltage: **1000 Vac; 1500 Vdc**
- UL Type **1, 3R, 4, 4X, 12**

Additional tests completed
- Dust/sand resistance (factory internal tested)
- Saline environments (according to IEC 60068-2-52)
- Weathering (according to IEC 60068-2-5)
- Permanent sun exposure (IEC 60068-2-5)

Photovoltaic

In a typical photovoltaic plant the direct current section comprises a generator consisting of strings composed of photovoltaic modules connected in series. The Gemini series of IP66 enclosures are ideal for use as field combiners or as parallel switchboards, i.e. for outdoor installation near the modules. ABB has a range which is currently unique on the market, and has developed a family of plug & operate solutions, i.e. a series of finished, wired and certified switchboards to meet the needs of a huge range of plant types: from single string for residential applications to large-scale solar fields (for more information see specific documentation on abb.com).

Adaptable to customers' requirements
Widest range and numerous accessories for a complete solution

With Gemini, you can benefit from a wide range of enclosures with different dimensions and the possibility to arrange the devices into the DIN-Rail as you need. Moreover, Gemini enclosures have a wide range of accessories for both automation and distribution applications, ensuring maximum versatility and integration.

Accessories

- Various locking systems can be installed (triangular, squared, with handles and ciphered type
- Ventilation and anti-condensation kits: protecting devices from the effects of heat and humidity
- Wall brackets, pole mounting kit and
- pedestal make it easier to install the enclosures in any context.
- Kit for installing Tmax XT circuit-breakers
- The universal drill bit can be used to create the holes to install the cable glands for cable derivations
- Doors with single central handle (as per picture beside) can be fitted with half cylinder locking systems and/or padlock

—

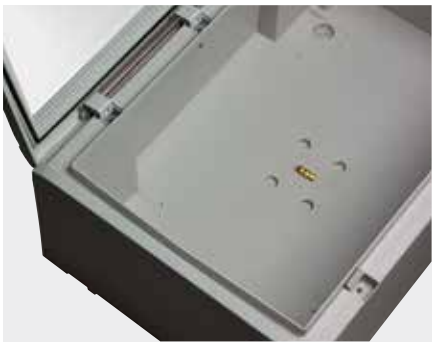
General purpose enclosures

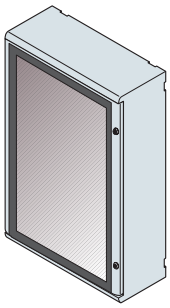
Basic configuration - Gemini switchboards

In the basic configuration, Gemini switchboards are composed of boxes in six different sizes ranging from 335x400x210 mm to 840x1005x360 mm (WxHxD, external measurements) and with opaque or transparent doors. In both versions, the doors are reversible and clip onto the hinges without the need to use tools; the fact that they open at an angle of more than 180° means that it is easy to work on the components installed inside the switchboard.
The seal applied by extrusion along the sides of the doors guarantees IP66 degree of protection. Access to the inside of the switchboard is protected by a standard double bit lock that can be replaced by locks of another type available in the accessories. Boxes and doors can be requested either separately or as combined “box + door” codes, to make filling out the order form more flexible. Inside the packages, the door is always wrapped separately and inserted inside a pocket that protects it from accidental damage until wiring is completed and the switchboard is installed.
Hole-cover plugs to guarantee IP protection and double insulation for wall mounting are also supplied with the pack together with the instruction sheet.

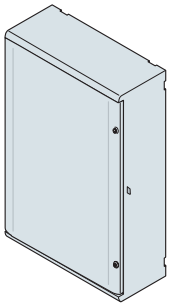


Specifications	
Protection	IP66 (IEC EN 60529) Class II insulation
Strength	Thermoplastic material moulded in co-injection Resistance to abnormal heat and fire up to a temperature of 750 °C (IEC EN 60695-2-11) IK10 (IEC EN 50102) degree of resistance to impacts Protection against chemical and atmospheric agents (water, saline solutions, acids, basic agents, mineral oils, UV rays) Operating temperature -25 °C ÷ +100 °C
Performances	Rated service voltage up to 1000 V Rated insulating DC voltage up to 1000 V Rated insulating AC voltage up to 1500 V
Flexibility of use	6 sizes from 335x400x210 mm to 840x1005x360 mm (WxHxD, external dimensions) DIN 24 to 216 modules
Installation	Snap-on mounting of all components in compliance with safety Standards
Quality and environment	Compliance with CEI EN 62208 international reference Standard, qualification for the requirements of CEI EN 61439-1 Standard, IMQ mark according to EN 62208 Standard. 100% recyclable EN 60068-2-52 resistance to marine environments EN60068-2-5 resistance direct sun exposure UL Listed: UL508A, UL50, UL50E Nema: Types 1, 3R, 4, 4X, 12

Gemini doors open at an angle of more than 180° giving easy access to the devices installed inside the switchboard.



No tools are needed for installation. The doors hook onto the hinges with special hinge pins and are reversible.



The special structure of the inner perimeter of the box ensures further protection against the penetration of water. The box is supplied with a spirit level.

General purpose enclosures

Basic configuration - Gemini switchboards

Transparent door switchboard

Opaque door switchboard

Boxes and doors

- Available in 6 sizes
- Single order code combined with box and transparent and opaque door
- Pack with door dismounted and wrapped separately
- Door designed so that it can be hooked onto hinges at both vertical sides and mounted without the use of tools
- To be mounted to the wall using internal holes or fixing brackets supplied as accessories
- Door opening at an angle of more than 180°
- RAL 7035 grey color
- Doors supplied with 2 standard double bit locks (3 for sizes 5 and 6) that can be replaced with locks for ciphered key or with square/triangular impression (the standard triplex key is suitable for use with three types of impressions).

General purpose enclosures

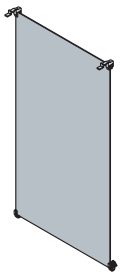
Components for automation applications

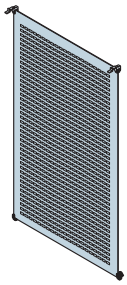
Gemini switchboards are designed to be perfectly compatible with ABB components for low voltage control and monitoring. For these applications they can be equipped with modular devices belonging to the System pro M range, with Tmax moulded-case circuit-breakers and control and signaling devices, creating a truly integrated automation system. When deciding the Gemini layout for control and monitoring applications, not only is it possible to select the box and door in the required size, but you can also select the base plate in one of the three versions in the range.

After wiring with the ducts and the Fix-O-Rapid device, the special standard adjustable feet and hooks must be fitted onto the base plate, allowing it to be inserted inside the box at up to seven different depths and three further levels of adjustment: no tools need to be used to carry out these operations. To finish the job, the inner door can be mounted (reversible and in insulating material), guaranteeing IP30 degree of protection when the switchboard door is open. No tools are needed unless the inner door is equipped with buttons, warning lights, etc.

The fixing hooks and feet supplied in the standard versions are applied without having to use tools, making it possible to install the base plate at seven different depths inside the switchboard. They can also be adjusted at three further positions.

Application of the inner door guarantees IP30 degree of protection when the switchboard door is open.





Example of the configuration of a switchboard for an automation application: some ABB control and protection devices are installed on the plate. The inner door is fitted with light-signaling devices.

Components for automation applications

Blank metal base plate

Drilled metal base plate

Insulating material base plate

Base plates

- Available in three versions in blank or drilled metal and insulating material
- Positioning at 3 different depths for size 1, 4 different depths for sizes 2-3-4 and 7 different depths for sizes 5-6 (adjustments with 30 mm pitch)
- Supplied with feet and hooks adjustable at three further positions (with 7.5 mm pitch)
- Snap-on mounting
- Plates can also be mounted directly on the base with the special kit.

Fix-O-Rapid

Rapid mounting device for attaching wiring ducts to the base plate: it snaps onto the plate after drilling a ø 7 mm hole. Two Fix-O-Rapid devices are enough for each wiring duct section. Fix-O-Rapid guarantees maximum insulation since it does not involve the use of any metal component inside the wiring duct. If the wrong wiring duct is selected, it can be dismounted and a version with the same base and a different height can be attached to the Fix-O-Rapid.

Rapid mounting device for wiring duct, W 150 mm	05 282	20/240

Fix-O-Rapid

General purpose enclosures

Components for distribution and mixed applications

In distribution and mixed applications, the Gemini switchboard is designed to be fitted with System pro M modular devices and Tmax moulded-case circuit breakers. The frame is the load-bearing element of the configuration: DIN rails, partial modular plates and the special Tmax mounting and cabling kits are snapped onto the uprights.
All the components can be adjusted to six different depths with a pitch of 12.5 mm and arranged at heights with standard installation pitch of 150, 225 and 300 mm and a distance of 75 mm between the rows.

Blank or drilled front panels are applied to protect the equipment and these can be hinged onto both sides; the cables are housed inside the vertical wiring duct integrated in the uprights according to an exclusive ABB patent. Wiring is carried out by pulling out the frame and working from the front; the ergonomic grip and the standard feet and snap-on hooks supplied make it easy to insert it inside the switchboard after the job is finished.

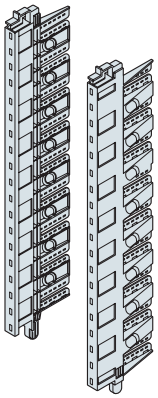
The DIN rail is supplied with special hooks already in position for attaching to the uprights.

The upright with the incorporated wiring duct is an exclusive ABB patent that rationalizes the path of cables inside the switchboard.

The depth at which the DIN rail, the modular plates, the kit for fixing the Tmax circuit breakers and the wiring duct are positioned can be adjusted with a simple sliding movement.

The frame can be extracted to make wiring operations easier at the workbench.

The blank and drilled panels are hinged onto both sides; the description of the installed components can be kept in the special compartment protected by a transparent, hinged flange.



Fixing hooks and feet allow the frame to be snap-mounted inside the box.

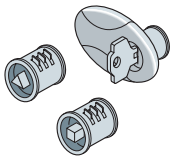
Accessories

Gemini switchboards have the same accessories for both automation and distribution applications, ensuring maximum versatility and integration of functions. In particular, the ventilation and anti-condensation kits make it even safer for the devices to run, protecting them from the effects of heat and humidity while the wall brackets, pole mounting kit and pedestal make it easier to install the switchboards in any context.

Three different kinds of locks are supplied for the doors with which it is possible to replace the standard double bit model. The universal drill bit can be used to open the side branch connections. Module covers hide the unused modules of the DIN rail guaranteeing IP40 protection when the door is open in distribution and mixed configurations.

The standard locks supplied can be replaced by the version with ciphered key and handle or with square or triangular impression.



Gemini wall-mounted installation using the special mounting brackets.

The fact that Gemini switchboards can also be pole-mounted (see photo above) or mounted on a special pedestal (see photo at the side) makes them suitable for any application situation.

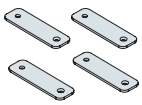
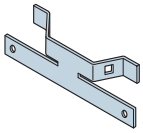
Lock with square impression	1SL0339A00	1/10
Tamper-proof locking kit (code 1SLO340A00 included)	1SL0458A00	1/10
Gemini standard lock	1SL0459A00	1/10



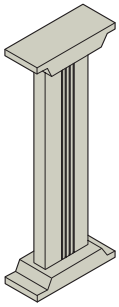
Locks for doors with handle

Description	Code	Unit/Pack
Yale Lock for door with handle	1SLM006600A0459	1/5
Ronis 455 lock for door with handle	1SLM006600A0460	1/5

Plastic wall brackets

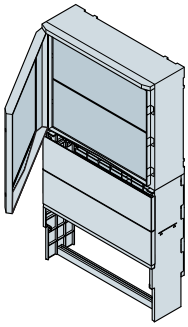


Stainless steel wall brackets



Mounting elements
Guarantee optimum wall, pole and floor mounting conditions.

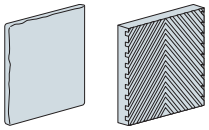
Description	Code	Unit/Pack
Horizontal and vertical plastic wall brackets (4 pieces)*	1SL0342A00	1/10
Horizontal and vertical plastic wall brackets UL listed (4 pieces)	1SLM006600A0342	1/10
Horizontal and vertical stainless steel wall brackets (4 pieces)	1SL0401A00	1/10
Pole mounting kit for sizes 1 switchboards**	1SL0343A00	1/4
Pole mounting kit for sizes 2-3 switchboards**	1SL0344A00	1/4
Pole mounting kit for sizes 4-5 switchboards**	1SL0345A00	1/2
Pole mounting kit for size 6 switchboards**	1SL0346A00	1/2
IP43 Floor mounting pedestal for sizes 1-4	1SL0352A00	1/1



* There are two types of inserts for adapting brackets to ø 6 e 8 mm fixing devices.
** The kit includes two elements for fixing the upper and the lower part of the switchboard.

Pole mounting kit

Floor mounting pedestal



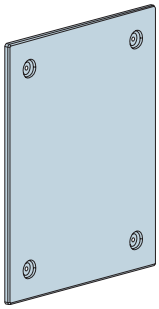
Pedestal

Pedestals
Allows the application of the Gemini switchboard to the ground without the need to prepare the construction of concrete footings or foundations when the pedestal is buried.

Description	Code	Unit/Pack
Pedestal Gemini size 4	1SL0464A00	1/1
Pedestal Gemini size 5	1SL0465A00	1/1
Pedestal Gemini size 6	1SL0466A00	1/1

General purpose enclosures

Accessories



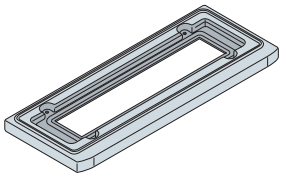
Ventilation kit

IP21/54 ventilation kits

- Composed of plastic grills and filter to ensure switchboard ventilation.
- Degree of protection without filter: IP21.
- Degree of protection with filter: IP54.
- Preassembled seal.

Description	Dimensions (mm)	Code	Unit/Pack
Grid + air flow kit	105x105	EN0105K	1/1
Grid + air flow kit (not suitable for size. 1)	150x150	EN0150K	1/1
Grid + air flow kit (not suitable for size. 1)	204x204	EN0204K	1/1

Note: screws not included; use 4 self lock screws 2,9x13 or ask for order code 1SL0384A00.

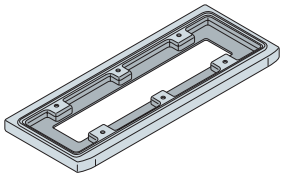


Base cover

Base covers

For aesthetic as well as functional purposes, in particular for pedestal installations.

Size of the switchboard	Code	Unit/Pack
1	1SL0385A00	1/4
2	1SL0386A00	1/4
3	1SL0387A00	1/2
4	1SL0388A00	1/2
5	1SL0389A00	1/2
6	1SL0390A00	1/2

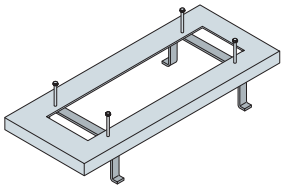


Coupling kit

Coupling kits

It follows the aesthetic outline of the boxes.

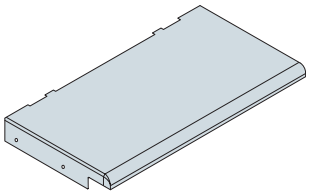
Description	Code	Unit/Pack
Vertical coupling kit for sizes 2-3 switchboards	1SL0413A00	1/2
Vertical coupling kit for sizes 4 switchboards	1SL0414A00	1/2
Vertical coupling kit for sizes 5 switchboards	1SL0415A00	1/2
Vertical coupling kit for sizes 6 switchboards	1SL0416A00	1/2



General purpose enclosures
Accessories

Bottom base

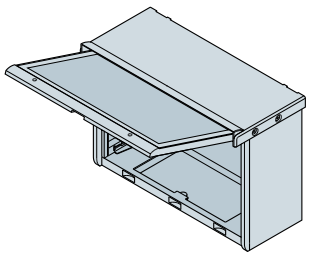
Bottom bases H 30
For fixing the Gemini switchboard directly to the floor.



Description	Code	Unit/Pack
Bottom base for size 2-3 switchboards	1SL0423A00	1/2
Bottom base for size 4 switchboards	1SL0424A00	1/2
Bottom base for size 5 switchboards	1SL0425A00	1/2
Bottom base for size 6 switchboards	1SL0426A00	1/2

Fixed frame

Fixed frames
- In combination with bottom base H 30
- For fixing onto poured concrete floors and bases.



Description	Code	Unit/Pack
Fixed frame for size 2-3 switchboards	1SL0433A00	1/2
Fixed frame for size 4 switchboards	1SL0434A00	1/2
Fixed frame for size 5 switchboards	1SL0435A00	1/2
Fixed frame for size 6 switchboards	1SL0436A00	1/2

General purpose enclosures
General characteristics of SR2 Enclosures

The range of SR2 enclosures is a complete offer of monobloc enclosures for constructing small and medium-sized electric automation, switching and control switchboards.

The SR2 enclosures come from the experience ABB has gained over the years in building IP65 metal structures (in accordance with the IEC 60529 Standard), together with the innovative new production process used for construction and patented by ABB.
The typical use of SR2 Enclosures is to make switchgear and controlgear switchboards for a very wide variety of industrial machines: from large machinery with automated production lines or parts of these, down to the typical installations of on-board machine switchboards, boilers, heating plants and so on.

They conform to the EN 62208 Standard “Empty enclosures for low voltage protection switchgear and controlgear assemblies” and allow realization of electrical equipment conforming to the prescriptions of the IEC 60204-1 Standard “Safety of machinery. Electrical equipment of machines” and of the EN 60439- 1 Standard and the new EN 61439-1-2 Standard “Low voltage protection switchgear and controlgear for assemblies”. The degree of protection, in accordance with the IEC 60529 Standard “Degrees of protection of enclosures (IP Code)”, is IP65.

The SR2 enclosures have also passed the control required to obtain the UL (Underwriters Laboratories) and CSA (Canadian Standards Association) Type 12 marks.

The SR2 enclosures also allow secondary distribution switchboards to be made, thanks to the possibility, in the 400, 600 and 800 mm widths, of installing the whole range of apparatus and modular circuit-breakers on DIN rails combined with special pre-drilled and hinged modular front panels, thereby allowing construction of AS/ANS type electrical switchgear conforming to the IEC 60439-1 Standard and the new EN
61439-1-2 Standard. A single line of metalwork structures therefore allows construction of automation and secondary and end distribution electrical switchboards thanks to the availability of a series of accessories (modular panels, DIN rails) and to the possibility of stacking the enclosures.

General purpose enclosures
General characteristics of SR2 Enclosures

The SR2 enclosures are available in two versions (blind door or glazed door) and in 23 different dimensions, as well as a further 19 combinations obtained by stacking the enclosures, up to a maximum height of 2000 mm, which guarantee ample selection possibilities for the various end applications.

The SR2 enclosures have been designed to fulfil all the typical needs of the builder or installer of switchgear in the best way possible and the user is presented with a unique ensemble of functional characteristics:

- wide dimensional range
- certified IP65 degree of protection
- internal galvanised sheet mounting plate with 20/10 thickness (made to allow threaded holes to be made easily), adjustable in depth by using a special accessory
- fairlead plate screwed on (at top and bottom) made of 15/10 thick galvanised sheet, with a sealing gasket applied inside
- complete reversibility of the enclosure, so the door can open either on the right or on the lefthand side
- possibility of installing all the apparatus and modular circuit-breakers on a DIN rail combined with a hinged modular panel

The standard colour is RAL 7035 orange peel. On request, the SR2 enclosures can be ordered in a wide range of RAL colours (see page 24/143).

Both the enclosures with glazed door or blind door can be stacked:
stacking is done simply by removing the fairlead plates and inserting the IP65 sealing gasket (GZ....), made of neoprene with closed cells.

Assembly of the stacked enclosures is carried out by means of the same holes used for the fairlead plates.
The door is supplied with the enclosure (single code) so as to reduce the number of articles and assembly times.

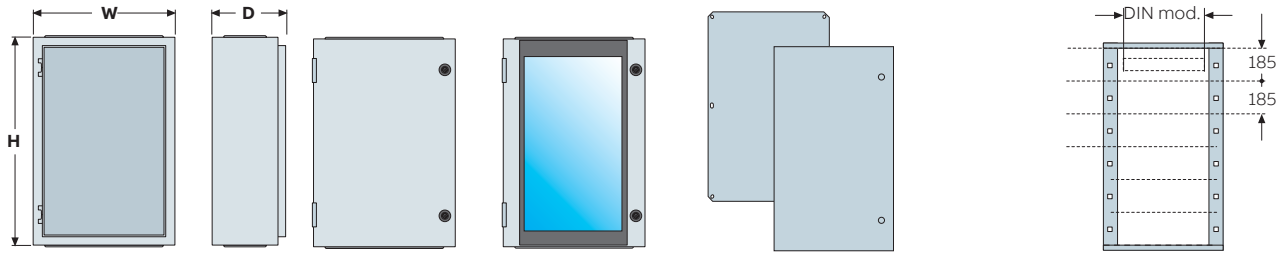
General purpose enclosures
General characteristics of SR2 Enclosures

The range is completed with a series of accessories: brackets for wall assembly, rain shield top cover, locks of various types, internal document pocket, spacers, and spray paint for touching up. It is possible floor fixing by means plinth.

Plastic document pocket, RAL 7035, size A4, the pocket is apply within the solid doors wider than 400 mm, with stickers provided.

Many closure systems can replace the standard closures of the external doors. The inserts are interchangeable and easily replaced by loosening a nut.

The brackets for wall mounting allows installation of the boxes on the wall using the holes located on the back of the enclosure.



The bars, made of electrolytic copper with M6 threaded holes in 25 mm, can be mounted on mounting plates using the appropriate supports.

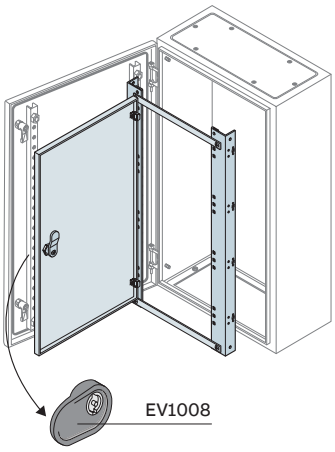
Enclosures with glazed door

The enclosures with glazed door are also used for distribution configurations. The internal equipment is made, alternatively, by selecting the special kits:

- KD... (Distribution Kit) consisting of a pair of functional uprights for assembly of the modular panels (to be ordered separately) and of any compensation panel.



The modular panels, which can also be installed on the enclosures with blind door with the help of the KD.. kit itself, are all hinged and have vertical modularity of 185 mm.

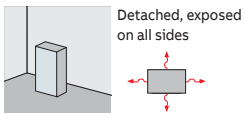
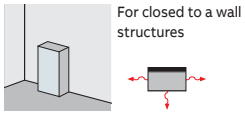
Temperature management

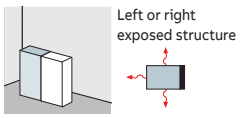
IP20 heater



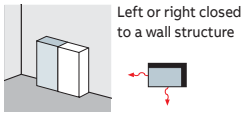
Their use prevents condensation in the electric cabinets. They consist of a heating element (PTC thermistor) inserted in an aluminium alloy ground plate. The PTC thermistor is a component which modifies its impedance according to the operating temperature. It is intrinsically stable and ensures primary safety features for the heater and service stability.
The main qualities of the heaters using PTC are:



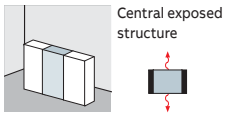
- electrical absorption (or dissipated power) which is almost constant in
- the range of power supply voltage between 100 and 250V;
- electrical absorption bound by inverse law to the trend of the ambient temperature.



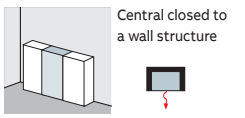
The special tubular geometry of the ground plate allows efficient thermal exchange with the heating element. This allows high powers and limited overall dimensions (especially in width and depth); Snap-on assembly on 35 mm DIN rail. Requires a thermostat.



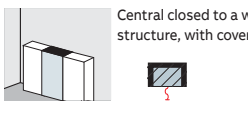
Description	Dimensions (mm) H	W	D	Code	Package/ No. of pieces
Anti-condensation heater 30W, 110-240 Vac-dc	115	42	42	VA7930	1/1
Anti-condensation heater 50W, 110-240 Vac-dcc	165	42	42	VA7950	1/1
Anti-condensation heater 75W, 110-240 Vac-dc	210	42	42	VA7975	1/1
Anti-condensation heater 100W, 110-240 Vac-dc	165	42	51	VA7910	1/1
Anti-condensation heater 150W, 110-240 Vac-dc	146	82	51	VA7915	1/1
Anti-condensation heater with fan 300W, 230 Vac-dc	148	82	91	VA8300	1/1



All the heaters with PTC absorb a higher power than the rated one on inrush according to a transitory which lasts a few tenths of a second.
If the heaters are to be supplied by means of an auxiliary transformer, its apparent power must be sized taking 1.5 times the rated power of the heaters with natural aeration and twice those with forced ventilation into consideration.



Detached, exposed on all sides



For closed to a wall structures

Left or right exposed structure

Left or right closed to a wall structure

Central exposed structure

Central closed to a wall structure

Central closed to a wall structure, with covered roof

IEC 890 method for calculating the effective cooling surface (CEI 17-43 method)

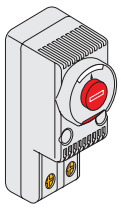
The total power dissipation P of an enclosure is linked to the exchange effective dissipating surface S, the ΔT difference between the inner and outer temperature and the k coefficient of heat exchange relative to the material of the enclosure:
$P = k * \Delta T * S$
k = 5,5 for painted steel
$\Delta T = T1-T2$;
T1 = dew point temperature (on overage 25 °C)
T2 = minimum ambient temperature.

General purpose enclosures

Ordering codes - SR2 enclosures

The exchange surface S can be calculated using the following table taken from the CEI 17-43

Disposition of the cabinet	Calculating the enclosure surface S (mm^2)	Dimensions (m)
Detached, exposed on all sides	S = 1,8 x H x (L+P) + 1,4 x L x P	L = width H = height P = depth
For closed to a wall structures	S = 1,4 x L x (H+P) + 1,8 x P x H	
Left or right exposed structure	S = 1,4 x P x (H+L) + 1,8 x L x H	
Left or right closed to a wall structure	S = 1,4 x H x (P+L) + 1,4 x L x P	
Central exposed structure	S = 1,8 x L x H + 1,4 x L x P + P x H	
Central closed to a wall structure	S = 1,4 x L x (H+P) + P x H	
Central closed to a wall structure, with covered roof	S = 1,4 x L x H + 0,7 x L x P + P x H	

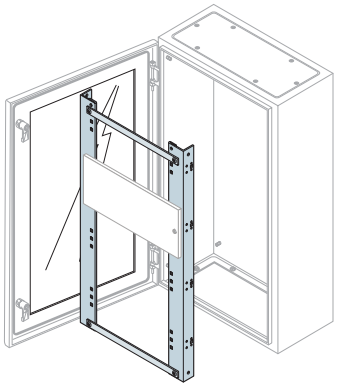


Using a SRN8630K box, in “for closed to a wall structures” case we will obtain:
T1 = 25 °C; T2 = 20 °C; K = 5,5; ΔT = (25-20) = 5 °C; S = 1,4m^2

The total power dissipation P obtained will be:
P= k * ΔT * S = 38,5 W

The recommended heater is VA7950 (50W).

Temperature management



IP20 Thermostat
Conforms to EN 60730-1, CE and cURus standards, IP20 degree of protection. Grey RAL 7035 colour; electrical life 100,000 cycles. Dimensions (HxWxD) 68x29x45mm, can be mounted on DIN rail. The version with NO (normally open) contact allows closure of a circuit activating ventilation, air conditioning, or alarms. The version with NC (normally closed) contact allows opening of a circuit, disconnecting any anti-condensation resistances.

Modular panels

Modular panels made of 12/10mm thick sheet steel painted RAL 7035 colour orange peel. The modular hinged panels can be mounted on the enclosures by using the special kit (KD...) consisting of functional uprights and compensation panel. The hinges patented by ABB, allow automatic earthing for panel contact when it is closed and are also suitable conventional earthing (with a cable). Each modular panel (PM) has a DIN rail provided (adjustable in depth), the fixing brackets and the relative small items. Modular and circuit-breakers and Tmax moulded-case circuit-breakers up to T3 can be placed side by side on the same DIN rail using the special depth adapter AP6001. To install moulded-case circuit-breakers, it is necessary to fix the DIN rail in a position towards the back. The fixing brackets of the DIN rail allow the wiring duct to be mounted up to a maximum size of 60 x 60 mm.

Painting Special Service

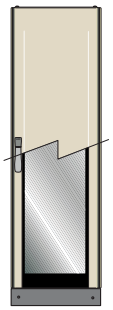
Description	Code
Extra cost for special SR painting	VERNSR

Standard size enclosures, standard colour
Special painting service with standard colour (see on the next page) for standard size enclosures in quantities equal to or greater than 4 units with single code to be managed with code SRN ... SPEC + VERNSR overprice equal to the number of enclosures + colour note to be specified in the order.

Example: SRN4320SPEC 4
VERNSR 4
COLOUR NOTE

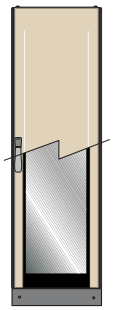
Standard size enclosures, non-standard colour
Request feasibility of implementation by completing the relevant Form for special quotations and send it to the R&D ECS office.
Management is per offer.
If the offer is accepted and after having received it, it will be possible to place the order with the codes indicated in the offer that will not be SRN...SPEC, but dummy ones.
Always remember to indicate the offer reference in the order.

Non-standard size enclosures, standard colour
Request feasibility of implementation by completing the relevant Form for special quotations and send it to the R&D ECS office.
Management is per offer.
If the offer is accepted and after having received it, it will be possible to place the order with the codes indicated in the offer, that will not be SRN...SPEC, but dummy ones:
Always remember to indicate the offer reference in the order.



Non-standard size enclosures, non-standard colour
Request feasibility of implementation by completing the relevant Form for special quotations and send it to the R&D ECS office.
Management is per offer.
If the offer is accepted and after having received it, it will be possible to place the order with the codes indicated in the offer, that will not be SRN...SPEC, but dummy ones:
Always remember to indicate the offer reference in the order.
Please note that the minimum quantity is four pieces with a single code.

General purpose enclosures



Standardised RAL colours (on request)

On request, colours other than the standard RAL 7035 orange peel one are available, using the same painting cycle (for other types of colours or paints, please contact ABB).

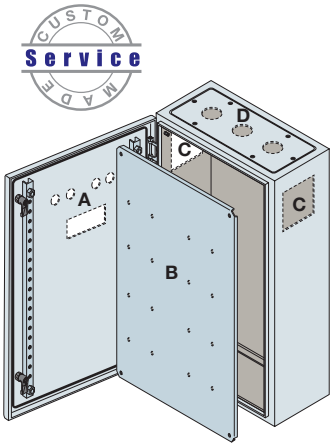
Corrosion test in saline mist



(Ref. Standard UNI ISO 9227, CEI50-5/4, IEC 60068-2-30)

Treatment time (hours)	24	48	72	96	120	144	168	192
Rust penetration	no	no	no	no	no	no	no	193[1]
Blistering	no	no	no	no	no	no	no	no

[1] When a tearing test with adhesive tape is carried out after 193 hours of exposure, about 3 mm of paint detachment can be noted from the notch area with 1–1.5 mm rust penetration.

General purpose enclosures

Ordering codes - SR2 enclosures

Special Drilling Service
The overprice amount depends on the number of individual drilled parts and not on the number of holes.
For single part it means: A-door B-plate; C-housing; D-top/bottom part.
Please note that the minimum quantity is 4 pieces with a single code.
The price of the special drilling service depends on the number of parts to be drilled and on the amount of enclosures to be drilled.

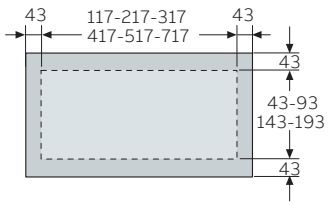
Description	Code	No. of enclosures to be drilled
Extra cost for drilling service per individual drilled part (A-B-C-D)	FORSR1	4-5-6
Extra cost for drilling service per individual drilled part (A-B-C-D)	FORSR2	7-8-9
Extra cost for drilling service per individual drilled part (A-B-C-D)	FORSR	≥ 10

Standard size enclosures with special drilling
The special drilling service for standard size enclosures in quantities equal to or greater than 4 units with a single code has to be managed with code SRN ... SPEC + overprice FORSR/ FORSR1/FORSSR2 (see table) equal to the number of enclosures and the number of parts to be drilled + hole layout to be attached to the order (see on the next page).
Example: Enclosure (4 pcs) with door to be drilled (1 part)

Example: Enclosure (4 pcs) with door and plate to be drilled (1 parts)
SRN4320SPEC 4
FORSR1 4
DRAWINGS TO BE ATTACHED

Example: Enclosure (4 pcs) with door and plate to be drilled (2 parts)
SRN4320SPEC 4
FORSR1 8
DRAWINGS TO BE ATTACHED

Non-standard enclosure sizes, special drilling
Request feasibility of implementation by completing the relevant Form for special quotations and send it together with the drill layout to the R&D ECS office.
Management is per offer.
If the offer is accepted and after having received it, it will be possible to place the order with the codes indicated in the offer, that will not be SRN...SPEC, but dummy ones.
Always remember to indicate the offer reference in the order.



General purpose enclosures

General characteristics and applications - SRX enclosures

The AISI 304 stainless steel used allows the cabinets to be installed either indoors or outdoors, by fixing to the floor or a wall. AISI 304 stainless steel enclosures with opaque door, usually intended for making enclosures for automation, are supplied with the galvanised sheet metal internal plate and do not have cable entry flanges.

SRX enclosures always conform to IEC EN 62208 and to IEC 61439-1-2, have a degree of protection IP66 (IEC EN 60529); NEMA 4X and NEMA 3R (UL standard). The degree of protection against external mechanical impacts is IK10 for the version with opaque door and IK09 for the version with glass door (IEC 62262).
AISI 304 stainless steel enclosures with glass door can also be used for distribution configurations. Alternatively, the internal equipment is made by selecting special kits (Distribution Kit) consisting of a pair of functional uprights for assembly of the AISI 304 stainless steel modular panels (to be ordered separately) and any compensation panels. The modular panels, which can also be installed on the enclosures with opaque door using the same KD Kit....X, are all hinged and have vertical modularity of 185 mm.

General purpose enclosures

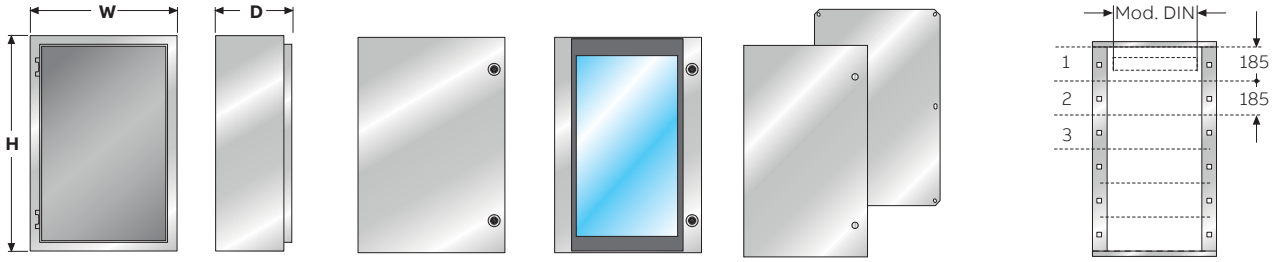
General characteristics and applications - SRX enclosures

SRX enclosures can be equipped with: standard plates, clip nuts, spacers, slotted internal plate, accessories for stacking, DIN rails and fixing brackets, shaped sections for accessories on doors, closing systems.

Spray protection roof
Improves protection against infiltration by liquids and accidental sprays. Made of AISI 304 stainless steel.

Distribution kit
All apparatuses and modular circuit breakers can be installed on a DIN rail combined with a modular panel.

Stacking
SRX enclosures can be stacked using the special kit. The plinth with removable flanges is made of 25/10 thick AISI 304 stainless steel.



Closing box
A new Ø19 mm closing box made of chrome-finished plastic with double tongue key.

Technical characteristics		
Conforms to		CEI EN 62208, IEC 61439-1-2
Degree of protection		IP66 (CEI EN 60529) UL Listed: UL 508A NEMA: Types 1, 3R, 4, 4X, 12

Screwed modular panels

12/10 mm thick AISI 304 stainless steel modular panels. The screwed modular panels can be fitted on the enclosures using the special kit (KD...) consisting of functional uprights and a compensation panel.
Each modular panel (PM) comes equipped with a DIN rail (depth-adjustable), fixing brackets and the relative small parts. Tmax modular and moulded-case circuit breakers up to T3 can be positioned side by side on the same DIN rail using the special depth adapter AP 6001.
To install MCCBs, fix the DIN rail in the recessed position. The DIN rail fixing brackets allow mounting of the wiring duct up to a maximum size of 60 x 60 mm.

Stainless steel screwed modular panels for DIN rail (including DIN rail and fixing brackets)

Shaped sections for accessories

Allow fixing of accessories (e.g.: wiring ducts) inside the blind doors. Consist of a pair of vertical crosspieces made of 15/10 thick white galvanised sheet metal, pre-drilled with 25 mm pitch. In enclosures with height 1000 and 1200 mm with a blind door, the shaped sections are already supplied.

Ordering codes - SRX enclosures

Special Drilling Service
The overprice amount depends on the number of individual drilled parts and not on the number of holes.
For single part it means: A-door B-plate; C-housing; D-top/bottom part.
Please note that the minimum quantity is 10 pieces with a single code. The price of the special drilling service depends on the number of parts to be drilled and on the amount of enclosures to be drilled.

Description	Code	No. of enclosures to be drilled
Extra cost for drilling service per individual drilled part (A-B-C-D)	FORSRX	≥ 10

The special drilling service for standard size enclosures in quantities equal to or greater than 10 units with a single code has to be managed with code SRN ... SPEC + overprice FORSR/ FORSR1/FORSSR2 (see table) equal to the number of enclosures and the number of parts to be drilled + hole layout to be attached to the order.

Example: SRN4320XSPEC 10
FORSRX 10

Example: Enclosure (10 pcs) with door and plate to be drilled (2 parts)
SRN4320XSPEC 10
FORSRX 20
DRAWINGS TO BE ATTACHED

Non-standard enclosure sizes, special drilling
Request feasibility of implementation by completing the relevant Form for special quotations and send it together with the drill layout to the R&D ECS office. Management is per offer.
If the offer is accepted and after having received it, it will be possible to place the order with the codes indicated in the offer.

Painting Special Service
Request feasibility of implementation by completing the relevant Form for special quotations and send it to the R&D ECS office. Management is per offer.

Switchboards for industrial applications with blank front

Technical characteristics

- protection degree IP 65
- insulation class II ⧈
- available in RAL 7035 grey
- available in the versions with transparent, smoky doors
- in polycarbonate material, self-extinguishing and resistant to abnormal heat and fire up to 960 °C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +125 °C in compliance with EN 60695-10-2 Standard
- shock resistance 20 Joules (IK level 10)
- perfectly symmetrical switchboards with possibility of hinging the door onto the front (by means of the special articulated screws supplied) on the right or left with 140° opening
- doors designed to take lock with coded key, code 12 866 all models (except for code 13 200) are fitted with one rigid and one bi-material flange for the facilitated insertion of conduits and cables
- switchboards made and produced in compliance with CEI 23-49 (1996) + V1 + V2, CB certificate IEC 60670-24 Standards
- switchboards are supplied complete with:
  - 4 screw-cover caps to guarantee ⧈
  - accessories for hinging the front part
  - 1 self-adhesive indicator strip per row
  - 1 certification plate
  - instruction sheet
- use 3.5×9.5 self-tapping screws to fix the components on the back

Terminal blocks

The complete terminal blocks are composed of a combination of terminal holders and terminal bars as indicated in the description, with the terminal bars already mounted on terminal holders.
Configuration of the complete terminal block is standard. For different requirements (customized terminal block), the terminal holders and bars must be procured separately in the versions indicated in the table.

Description	Order code	Box/pack No items
for 12 modules – composed of 12540×1 + 12531×1 + 12532×1	12 492	10/40
for 18 modules – composed of 12543×1 + 12531×1 + 12535×1	12 498	10/40

Terminal holders

The terminal block is completed by combining the necessary terminal bars to the terminal holders, taking care to keep the terminal bars separate from each other.

For switchboards type	Description	Order code	Box/pack No items
13 204 - 13 205 - 13 206	for 12 modules	12 540	12/144
13 208	for 18 modules	12 543	12/108

Terminal bars

The terminal bars can be installed on any kind of terminal holder; they are snapped onto these with 2 clips for bar, through two holes made at the ends of the bar itself.

Description No of holes × ∅ holes (mm) + No of holes × mm²	Order code	Box/pack No items
5×16	12 531	20/240
10×16 + 3×25	12 532	20/240
16×16 + 3×25	12 533	20/240
15×16 + 6×25	12 534	20/240
19×16 + 6×25	12 535	20/240

Terminal holders and terminal bars are supplied separately. In this way, by inserting one or two terminal bars into the terminal holder you can create the best terminal for your requirements, with the advantage of obtaining a terminal block that is cheap as well as personalised, due to the fact that you only need to use material that is really necessary.
Some standard configurations are illustrated in the table.
All the possible configurations that can be created for each type of consumer unit are given in the technical details.

Pedestals

EH - Cabinets for underground cable distribution and all types of outdoor industrial applications

A wide range of pedestals has completed our comprehensive range of nonmetallic enclosures for several years. In power distribution application pedestals enable the connection of underground cables and the distribution to several consumers within the cabinets. Besides there are lots of applications that require reliable outdoor housings like Telecommunication or Traffic signalling.

Applications

- Energy distribution
- Cable television
- Telecommunication and electronics
- Traffic signalling and public lighting
- Temporary service for construction sites
- Camping sites and market places
- Marinas
- Water treatment
- Sub-stations
- 48 cm (19") racking systems

Standard: EN / IEC 61439-5

Specifications

- Cabinets to be mounted on a plinth.
- The base is partly buried into the ground.
- For some types the base is an integrated part of the pedestals.
- As with all our polyester boxes and cabinets, the pedestal feature high protection and total insulation to IEC 61439-5.
- Very high mechanical impact strength IK10 (EN/IEC 62262) and a high thermal insulation which results in reduced temperature variations within the enclosure.
- All cabinets are corrosion resistant and UV stabilised for outdoor applications.

EH1 - Small pedestal

EH1C14VH

Applications
- Cable television
- Gas distribution
- Telecommunication (surface connections)
- Camping sides

Standard: EN / IEC 62208

Specifications
- Small outdoor enclosure with integrated base.
- Hood grey colour RAL 7035:
  - ventilated version in polyester or thermoplastic engineering polymer,
  - non ventilated version in hot moulded, glass fibre reinforced polyester,
  - blackened triangular zamac locking screws, vandalproof and for all seasons.
- - Degrees of protection:
  - IP23D for the non ventilated hoods,
  - IP20 for the ventilated hoods.
- IK09 protection rating against external mechanical impacts in accordance with EN/IEC 62262.
- Rated insulation voltage Ui 690V.
- Base in high density polyethylene (HDPE) RAL 9005.
- Base resists a ground temperature of -50°C.
- The upper part of the base serves as a mounting plate and is provided with three slots for fixation points.
- Moulded-in indication of burial depth.
- Option: 2432E lock.
- Easy to install by one person only (weight: 4.5 kg).
- Dimensions: 753×385×270 (H×W×D in mm).

Pedestals

EH2 - Column cabinets

EH2 - Distribution columns

Applications

- Energy distribution
- Cable television
- Traffic signage and public lighting
- Camp sites and marketplaces
- Gas stations
- Pump applications

Standard: EN / IEC 61439-5

Specifications

- The lower section has a polyester plate closure.
- RAL 7035 dyed in the mass gray color.
- IP44 protection rating in accordance with EN/IEC 60529.
- Total insulation ⧈.
- IK10 protection rating against external mechanical impacts in accordance with EN/IEC 62262.
- Corrosion-resistant.
- UV-stable for exterior installation, improved UV resistance thanks to its special coating.
- Resistant to temperatures of between -35°C and +80°C.
- Temporary temperature increases cause no damage.
- The semi-cylindrical locks are built in to an integral handle, protected by a plastic anti-vandal cover.
- The front section comprises removable cases.
- The mounting holes for receiving M6 threaded inserts located on the rear panel allow direct access for installing sets of busbars, frames or mounting plates.
- The rear and base are made from a single piece.
- The lower section of the column provides a stable mounting into the ground
- The hinged hood has an opening angle of 90°, providing easy access.

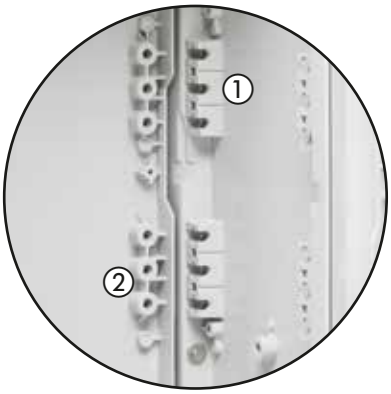
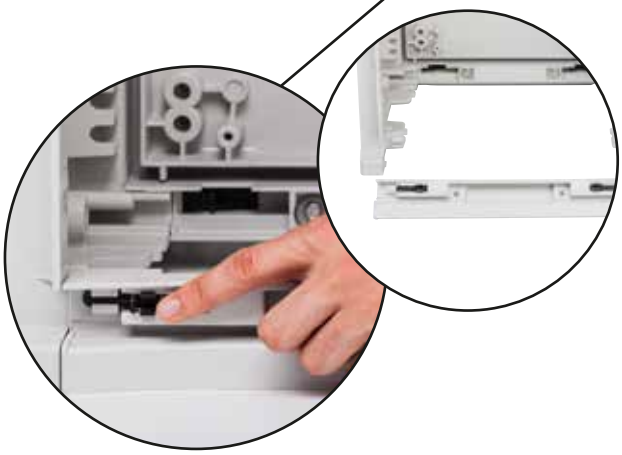
Notes

Pedestals



EH3 - DIN size pedestals

Water and dust accumulation prevented by a sloped roof.



Fixation of bus bars with M8 hexagonal screws in the side wall, to maximize the width and space for electrical devices ①. Fixation of mounting plate with M8 press-in nuts in the back wall to maximize depth for electrical devices ②.

Convenient removal of bottom profile for easy access by tool less slider operation.

Easy fixation of side- /back-wall and roof by use of self tapping screws.

Quick and easy dis-assembly of door with captive hinge pins.

Swing handle for 45mm profile half cylinders with sealable cover.

Vandalism safe door.
hook on doors inner side.

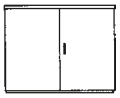
Pedestals

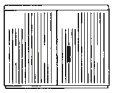
EH3 - DIN size pedestals

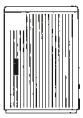
EH3 - DIN size pedestals

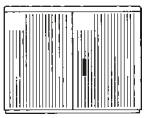
Applications
- Energy distribution
- Gray water processing
- Cable television
- Solar energy applications
- Camp sites and marketplaces
- Traffic signage and public lighting

Standard: EN / IEC 61439-5









Specifications
- Cabinets made of hot moulded, glass fibre reinforced polyester.
- Dyed in mass RAL 7035 light grey.
- Delivered in kit-form or factory assembled.
- Protection degree IP44 according to EN 60529, IEC 60529.
- Total insulation.
- Protection degree IK10 against external impacts according to EN/IEC 62262.
- Corrosion resistant.
- UV stabilized for outdoor applications, coated cabinets for increased resistance and aesthetics against UV-corrosion available.
- Suitable for use in environments from -35° C to +80° C. Temporary exceeding temperatures will not be harmful.
- The open door can be manually unhinged to allow free access for maintenance. Door opening angle exceeds 180°.
- Studs are moulded in the rear panel which can receive M8 inserts to allow direct mounting at busbars, a frame or a mounting plare for components.
- Fixation points at the side panel are foreseen to mount busbars.
- Supplied with open bottom.
- To be mounted on a basement according to DIN 43629 standard dimensions between the fixation points.
- The rainhood shape prevents water stagnation on the roof.
- Removable bottom profile for easy cable access without tools.

EH3/F - flat surface pedestals
- 4 different widths; all sizes have the same height and depth.
- The swing handle is designed to receive a half profile cylindric lock.

EH3/AP - anti poster pedestals
- 5 widths with 2 different heights; all sizes have the same depth.
- 3-point closure system, exposed handle-actuated.
- The robust handle leaves more space inside the cabinet and is compatible with a profiled semi-cylindrical lock.
- The doors and rear panel are profiled, which prevents the affixing of posters.

Front plate with opening for temporary connections on DIN base			
May be used with DIN -00 to -2 bases in RAL 7035 color (EH3SEXEI-EH3SE2EI). This front plate is not standard and must be ordered in addition. The standard closed front plate may be used if it is not necessary for temporary connections. The DIN 3 base is standard with a front plate for temporary connections. The front plates on the front and rear are secured by screws.

Pedestals

EH3 / GD - DIN size pedestals deep version

EH3 GD deep cabinets

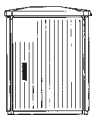
Applications

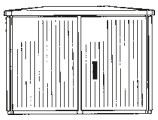
- Energy distribution
- Gas meter cabinet
- Control cabinet and
- Generators and transformer stations
- Pump house installation
- Cabinet for 19" power supply frame
- Rectifiers

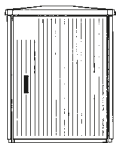
Standard: EN / IEC 61439-5

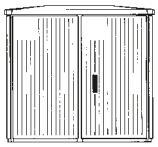
Specifications and advantages

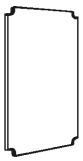
- Doors, back and side walls made from hot molded glass fiber-reinforced polyester.
- RAL 7035 dyed in the mass gray color.
- Glass fiber-reinforced hand lay-up polyester hood.
- Hood with RAL 7035 outer coating.
- Nine sizes in two heights, two depths and three widths. Cabinets supplied assembled.
- Supplied factory-assembled or in kit form.
- IP44 protection rating in accordance with EN/IEC 60529.
- Total insulation ⧈.
- IK10 protection rating against external mechanical impacts in accordance with EN/IEC 62262.
- Corrosion-resistant.
- UV-stable for outdoors installation.
- Resistant to temperatures of between -35 C and +80 C.

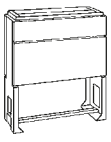












Temporary temperature increases cause no damage

- This handle is not flush-fitting, increases the usable depth of the cabinet and can be fitted with semi-cylindrical locks.
- Doors can be removed manually for ease of access for maintenance tasks.
- Option to have the door side-opening or bottom-opening.
- The mounting holes for receiving M8 threaded inserts located on the rear panel allow direct access for installing sets of busbars, frames or mounting plates.
- Option to have the door side-opening or bottom-opening.
- Supplied with mounting points for installation on the ground or on a base.
- The shape of the hood prevents standing water which could stagnate.
- The anti-poster surfaces make it very difficult to affix posters and result in them falling away.

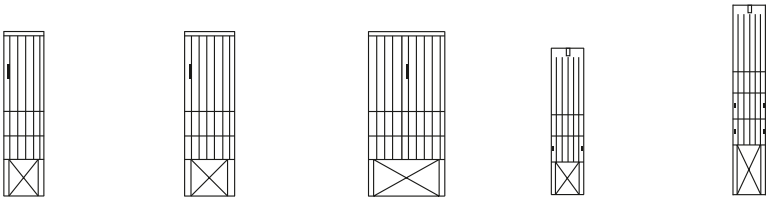
EH4 - Column cabinets

EH4 Column Cabinets

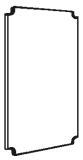
Applications
- Energy distribution
- Cable television
- Traffic signaling
- Camp sites
- Gas stations

Standard: EN / IEC 61439-5

Specifications
- Doors, back and side walls made from hot molded glass fiber-reinforced polyester.
- RAL 7035 dyed in the mass gray color.
- IP44 protection rating in accordance with EN/IEC 60529.
- Total insulation ⧈.
- IK10 protection rating against external mechanical impacts in accordance with EN/IEC 62262.
- Corrosion-resistant.
- UV-stable for outdoors installation.
- Resistant to temperatures of between -35 C and +80 C, temporary temperature increases cause no damage.
- The mounting holes for receiving M6 threaded inserts located on the rear panel allow direct access for installing sets of busbars, frames or mounting plates.
- The lower section of the column provides a stable mounting into the ground
- The shape of the hood prevents standing water which could stagnate.



EH4
- Cabinet with hinged door - IP44.
- The column and lower section are supplied together.
- Supplied with handle for semi-cylindrical lock.
- Door opening angle of 180°.



EH4-S
- Cabinet with removable front components - IP44.
- The lower and rear sections of the column are molded as a single piece.
- The front of the column has a recessed housing for a cylindrical
- lock, protected by a plastic anti-vandalism cover.
- Easy to access thanks to removable front panels.

Livorno Series emergency consumer units

Technical details designed to facilitate installation

Three degrees of protection IP40, IP55, IP65 allow to install these emergency consumer units in any environment, residential, tertiary or industrial.

The self-extinguishing thermoplastic frame ensures resistance to abnormal heat and fire

The front door is equipped with a protective glass that can be broken in case of need using the glass-breaking hammer (included)

The flush-mounting, wall-mounting or DIN rail versions offer extensive installation choices

Livorno Series emergency consumer units
Technical details designed to facilitate installation

The Livorno Series is a range of emergency consumer units equipped with an emergency breakable glass to quickly and effectively stop systems or services in the case of malfunctions or dangers that may occur in residential, tertiary or industrial installations.

Made of self-extinguishing thermoplastic material, these devices are mainly installed in those environments that have greater risk of fire.
The flush- and wall-mounting versions can be equipped with a luminous button and glass-breaking hammer.

Livorno Series emergency consumer units

Consumer units, technical specifications

Protection class	IP40, IP55 or IP65, according to version.
Version	flush- and wall-mounting.
Colour	RAL 3000 red and RAL 7035 grey.
Installation temperature	-25°C ÷ +60°C.
Resistance to heat	ball thermopressure up to +85°C according to EN 60695-10-2 standard.
Front door	breakable glass 0.75 (IK05 degree).
Material	self-extinguishing thermoplastic material, resistant to abnormal heat and fire up to 650°C (glow wire test), according to IEC 60695-2-11 standard.
Door lock	coded-type key
Included accessories	module covers (per DIN rail versions)
	4 screw cover plugs
	certification plate

Consumer units with emergency button, technical specifications

Protection degree	IP55.
Version	flush- and wall-mounting
Colour	RAL 3000 red.
Installation temperature	-25°C ÷ +60°C.
Rated operating voltage Ue	250 V.
Utilisation category	AC 12.
Rated operating voltage Ie	2 A.
Rated insulation voltage Ui	250 V.
Pollution degree	3.
Fuses	10 A, gG type, 10.3x38 mm.
Front door	breakable glass 0.75 (IK05 degree).
Material	self-extinguishing thermoplastic material, resistant to abnormal heat and fire up to 650°C (glow wire test), according to IEC 60695-2-11 standard.
Luminous button	with 1 NO contact + 1 NC contact (2 A, 250 V).
Included accessories	glass-breaking hammer.
Optional accessories	12 or 24 V bulb lamp (incandescent), or 250 V (fluorescent).
Conformity	EN 60947-5-1 standard.
Mark of approval	IMQ according to EN 60947-5-1

IP44, IP55 and IP65 Junction boxes
The details make the difference

High resistance to heat and chemical and atmospheric agents

Installation temperature from -25 °C to +60 °C

Three lid types available: press-on, with steel screws and with plastic screws with a ¼ turn closing

Boxes with protection degree IP55 and IP65 are composed of a patented lid produced in a single pressing phase together with its seal

IP44, IP55 and IP65 Junction boxes
The details make the difference

A wide range for all needs.
There are IP44 for press-on lid boxes with cable glands, IP55 for screw-on lid boxes with cable glands and IP65 for screw-on lid box with smooth sides.

Some versions of the IP44 and IP55 junction boxes are already equipped with cable glands.

Boxes with protection degree IP55 and IP65 are composed of a patented lid produced in a single pressing phase together with its seal.

Now new: All IP65 junction boxes (with smooth sides) are manufactured in halogen free thermoplastic material.

Wall-mounting is also possible.
All junction boxes measuring 160x135, 220x170 and 310x240 mm can be mounted on the wall with brackets (accessory; code 12858).

All IP44, IP55 and IP65 junction boxes are also available in thermoplastic material, self-extinguishing in compliance with UL 94 V2 Standard and resistant to abnormal heat and fire up to 960 °C GWT.

Enclosures

IP44, IP55 and IP65 Junction boxes

- IP44, IP55 and IP65 Junction boxes for swimming pool control equipment, washing car centers, garages, building services, automatic garden lighting and watering, traffic signs, photovoltaic installations.
- Protection degree: IP44 for press-on lid boxes with cable glands, IP55 for screw-on lid boxes with cable glands, IP65 for screw-on lid box with smooth sides
- Shock resistant: IK07 for IP44 boxes, IK08 for IP55 and IP65 boxes
- IP44 and IP55 boxes with press-on lids in thermoplastic material, self-extinguishing in compliance with UL 94 HB Standard and resistant to abnormal heat and fire up to 650°C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- IP65 boxes with screw-on lids in halogen free thermoplastic material, self-extinguishing in compliance with UL 94 HB Standard and resistant to abnormal heat and fire up to 650°C (glow wire flammability index) in compliance with IEC 60695- 2-11 Standard
- Installation temperature from -25°C to +60°C; Resistant to heat: ball thermopressure up to +85°C for IP44, IP55 and IP65 junction boxes
- Boxes with protection degree IP55 and IP65 are composed of a patented lid produced in a single pressing phase together with its seal
- All junction boxes made in compliance with IEC 60670-1 and IEC 60670-22 Standards
- IP44 and IP55 junction boxes in thermoplastic material obtained the IMQ mark of approval
- All the boxes are RoHS compliance

All IP44, IP55 and IP65 junction boxes are also available in thermoplastic material, self-extinguishing in compliance with UL 94 V2 Standard and resistant to abnormal heat and fire up to 960°C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard.

Technical characteristics of metric cable clamps:
Protection degree IP68
Material: polyamide 6.6, self-extinguishing material according to UL94V2 Standard and resistant to abnormal heat and to fire up to 750°C (glow wire test) according to IEC 60695-2-11 Standard
Operational temperature: from -20°C up to +120°C (short period of time)
Colour: RAL 7035 grey;
Neoprene seal;
Thread pitch: 1.5 mm; Thread angle: 60°
Tightening with a plate crown on the whole diameter of cable (excluded the possibility to damage the cable itself)
Possibility to recover the cable clamp without compromising its efficiency.

Technical characteristics nuts of with metric pitch collar

Europa65 junction boxes

Technical details designed to facilitate installation

Bi-material flanges allow easy entry of cables or conduits

Convenient mounting brackets (optional) on the back side allow to fix the box to the wall in a quick and accurate way

Accessories include base plates or DIN rails to better integrate different types of devices

The front cover is provided with captive-type plastic clamping screws to ensure greater ease of use

Europa65 junction boxes

Technical details designed to facilitate installation

Rigid on one side and bi-material flange on the other to facilitate input of conduits and cables. The flanges are removeable and interchangeable.

The Polycarbonate GWT 960 ensure unique mechanical performances (Shock resistance IK10) and ensure high resistance against UV rays.

Perfectly symmetrical consumer units with the possibility of attaching the door hinge onto the front (by means of the special articulated screws supplied) on the right or left with 140° opening.

Different type of devices can be installed in an integrated and rational manner thanks to the many accessories such as base plates or a DIN rail.

The frame that can be fitted onto the consumer unit makes semi-flush mounting possible, guaranteeing an attractive finish.

The consumer unit can be fitted with Neutral (N) or Earth (E) terminals, by combining the copper terminal bars to the corresponding plastic terminal holders.

Europa65 junction boxes

Technical characteristics

- protection degree IP 65
- insulation class II ⧈
- available in RAL 7035 grey
- in polycarbonate material, self-extinguishing and resistant to abnormal heat and fire up to 960 °C (glow wire test) in compliance with IEC 60695-2-11 Standard
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +125 °C in compliance with EN 60695-10-2 Standard
- rated insulation voltage: 1000 V AC; 1500 V DC
- shock resistance 20 Joules (IK level 10)
- perfectly symmetrical junction boxes with possibility of attaching the lid hinges, (using the special articulated screws supplied) on the right or left with 140° opening
- boxes code 12 808, 12 812, 12 814, 12 816 and 12 818 fitted with one rigid and one bi-material flange for facilitated input of conduits and cables
- junction boxes produced in compliance with CEI 23-49 (1996) + V1 + V2, CB certificate IEC 60670-24 Standards
- boxes are supplied complete with:
- 4 screw-cover caps to guarantee ⧈
- accessories for attaching the hinges on the front
- 1 certification plate
- instruction sheet
- use 3.5x9.5 self-tapping screws to fix the components on the back

Terminal blocks

Terminal blocks

The complete terminal blocks are composed of a combination of terminal holders and terminal bars as shown in the description, with the terminal bars already mounted on terminal holders. The complete terminal blocks are standard configurations. For different requirements (customized terminal blocks), the terminal holders and the terminal bars must be purchased separately in the versions given in the table.

NEMA Flow Goods products

Thank you for your interest in NEMA Flow Goods products! Our offering consists of load centers, circuits breakers, surge protection devices and modular metering, which are sold primarily in the United States. In order to provide you with the most accurate and up to date information, we have provided the links below to our US catalog

Residential Surge Protection

Externally Mounted Surge Devices and Internally Mounted Surge Devices

Introduction

ABB offers a series of residential surge protection devices that can be installed inside or outside of the home's electrical panel and offer superior protection for sensitive electronics.

All residential surge protection devices are UL listed, designed for 120/240V applications and meet the NEC 2020 requirements.

THOMESURGE
The THOMESURGE is a Type 1 SPD designed for service entrance or subpanel locations and provides surge protection for the entire home or office.
The THOMESURGE is a cost effective surge solution that can be installed with any manufacturer's panel.

Visit our website

https://new.abb.com/low-voltage/products/surge-protective-devices/thomesurge

OVRHR361202S
The OVRHR361202S is a Type 1 SPD designed for service entrance or subpanel locations and provides surge protection for the entire home or office. The OVRHR361202S is a cost effective surge solution that can be installed with any manufacturer's panel.

Visit our website

https://new.abb.com/low-voltage/products/surge-protective-devices/ovrhr361202s

THQLSURGE
The THQLSURGE is a Type 1 SPD designed for service entrance or subpanel locations and provides surge protection for the entire home or office.
The THQLSURGE conveniently connects inside the GE/ABB PowerMark Pro load center, providing surge protection for the entire panel and all attached loads.

THOMESURGE(P)

Residential Surge Protection Device

Features:

- 36 kA per Phase
- UL 1449 Listed
- 10 kA I-nominal Rating
- 200 kA SCCR
- Meets NEC 2020 Requirements

Product Specifications

General Specifications	
Maximum Surge Current	36 kA per Phase
UL Type Designation	Type 1
UL 1449 I-nominal Rating	10 kA
UL 1449 Short Circuit Current Rating	65 kA

Design Specifications
Custom MOV design for High Energy Handling in Category C locations
Thermally Protected MOVs
External Parallel Connected for Mounting next to Electrical Gear
Reduced Mode of Protection (L1-N, L2-N)

Diagnostic & Status Monitoring Specifications
LED Protection Status Monitoring (Single LED Standard)

Enclosure
Polycarbonate 4.25” × 2.41” × 2.75”
Lid ultrasonically sealed
NEMA 4X
1/2 inch NPT Side Mount Nipple

Filtering
NO

Technical data	
Humidity Range	0 – 95% non-condensing
Operating Frequency	50 – 60 Hz
Operating Temperature	–35°C to +85°C

Product Diagram

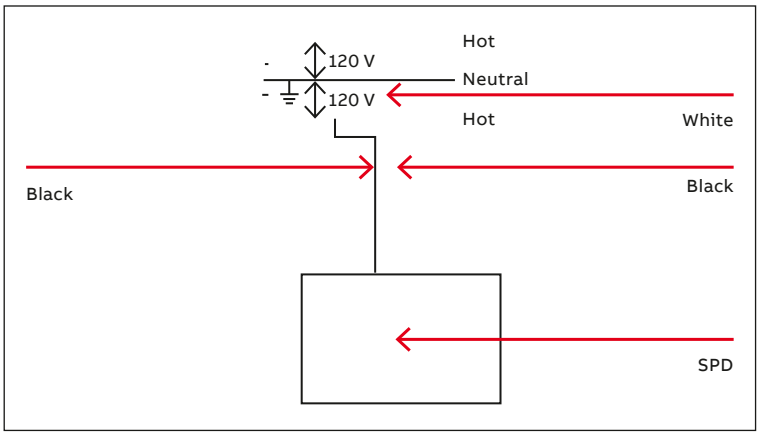
SurgePro™

Surge Protective Device (SPD)

This surge protective device is designed to be used on electrical systems that are 120/240 or 120/208 V AC.

⚠ WARNING

- Risk of shock, disconnect power before installation.
- SPD should be installed by a qualified electrician in accordance with national and local electrical codes.
- Hazardous voltages exist within SPDs when energized — SPDs should never be installed or serviced when energized. During



installation into an electrical system, the SPD must not be energized until the electrical system is completely installed, inspected and tested.

- Use appropriate safety precautions including personal protection equipment.
- Do not HIPOT the SPD unit or the electrical system in which the SPD unit is connected without disconnecting the SPD unit's conductors, including phase, neutral and ground.
- Cannot be used on ungrounded systems.
- The voltage rating of the SPD and system must be verified before energizing the SPD.
- Failure to follow these instructions can result in death, serious injury and/or equipment damage.
- This manual shall be read in its entirety prior to installing.

Pre-plan your installation

- Meet all national and local codes. (NEC Article 242 addresses SPDs.)
- Mount SPD as close to panel or equipment as possible to keep leads short. Ensure leads are as short and straight as possible, including neutral and ground.
- Consider a breaker position that is closest to the SPD and the panel's neutral and ground.
- Suggested breaker size is 20 A 2-pole breaker.
- Short circuit current rating (SCCR) 200 kA.
- Make sure system is grounded per NEC and clear of faults before energizing SPD.

Installation instructions

1. Use a voltmeter to check all voltages to ensure compatibility with SPD.
2. Remove power from panel. Confirm panel is de-energized by using a voltmeter.
3. Identify connection/breaker location and SPD location.
4. Remove an appropriately sized knockout from panel.
5. Mount SPD. Connect to equipment using an approved wiring method, including seals appropriate for the enclosure rating.
6. Connect conductors as appropriate — short and straight as possible.
7. Label or mark conductors as appropriate — energized — black: neutral — white.
8. Make sure system is bonded per NEC and is clear of hazards or faults before energizing (N-G bonding not per NEC is the #1 cause of SPD failures).
9. Apply power to the panel.
10. Verify that the status indication light on the face of the SPD is illuminated. If the light is not on, remove the power supplying the panel and review all the previous installation procedures.

Surge Protective Device (SPD)

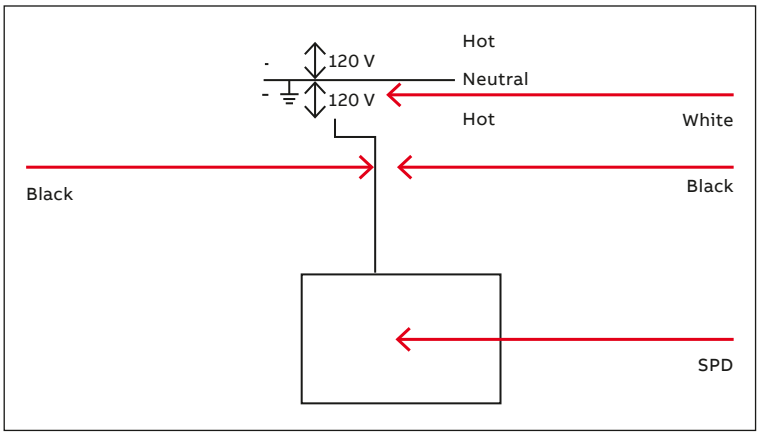
This surge protective device is designed to be used on electrical systems that are 120/240 or 120/208 V AC.

⚠ WARNING



- Risk of shock, disconnect power before installation.
- SPD should be installed by a qualified electrician in accordance with national and local electrical codes.
- Hazardous voltages exist within SPDs when energized — SPDs should never be installed or serviced when energized. During installation into an electrical system, the SPD must not be energized until the electrical system is completely installed, inspected and tested.
- Use appropriate safety precautions including personal protection equipment.
- Do not HIPOT the SPD unit or the electrical system in which the SPD unit is connected without disconnecting the SPD unit's conductors, including phase, neutral and ground.
- Cannot be used on ungrounded systems.
- The voltage rating of the SPD and system must be verified before energizing the SPD.
- Failure to follow these instructions can result in death, serious injury and/or equipment damage.
- This manual shall be read in its entirety prior to installing.

Pre-plan your installation

- Meet all national and local codes. (NEC Article 242 addresses SPDs.)
- Mount SPD as close to panel or equipment as possible to keep leads short. Ensure leads are as short and straight as possible, including neutral and ground.
- Consider a breaker position that is closest to the SPD and the panel's neutral and ground.
- Suggested breaker size is 20 A 2-pole breaker.
- Short circuit current rating (SCCR) 200 kA.
- Make sure system is grounded per NEC and clear of faults before energizing SPD.

Installation instructions

1. Use a voltmeter to check all voltages to ensure compatibility with SPD.
2. Remove power from panel. Confirm panel is de-energized by using a voltmeter.
3. Identify connection/breaker location and SPD location.
4. Remove an appropriately sized knockout from panel.
5. Mount SPD. Connect to equipment using an approved wiring method, including seals appropriate for the enclosure rating.
6. Connect conductors as appropriate — short and straight as possible.

7. Label or mark conductors as appropriate — energized — black: neutral — white.
8. Make sure system is bonded per NEC and is clear of hazards or faults before energizing (N-G bonding not per NEC is the #1 cause of SPD failures).
9. Apply power to the panel.
10. Verify that the status indication light on the face of the SPD is illuminated. If the light is not on, remove the power supplying the panel and review all the previous installation procedures.

SurgePro™

AC power surge protective device

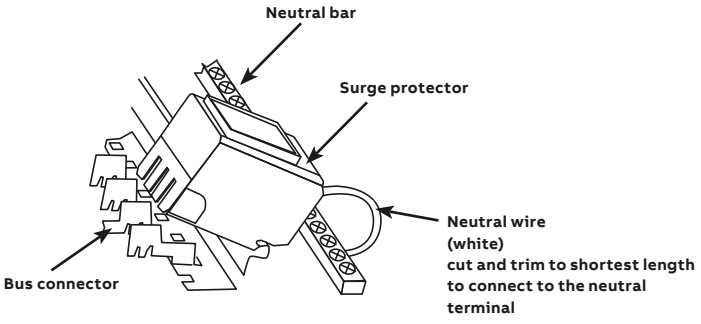
Benefits

- AC power surge protective device for the entire home or office – computers, TV, appliances and all other sensitive electronic equipment
- Mitigates against surge damage caused by lightning and utility switching events
- Installs in your GE PowerMark™ load center (the best location for protecting all AC circuits in your home) directly onto the bus
- Up to 50,000 amps of surge protective strength
- Meets newest UL 1449 4th edition surge protection requirements
- 3-year, $15,000 connected equipment warranty (from date of purchase) when installed according to NEC electrical and safety codes on cULus approved equipment
- Can be installed to meet NEC 2020 Art. 230.67 SPD requirements for dwelling units at or adjacent to service entrances.

Product features

- Single phase, three wire, 120/240 VAC, 50 kA rated
- UL 1449 4th edition listed (VZCA:E316636 and VZCA7:E316636) as a Type 1 SPD with a 100 kA SCCR rating
- Monolithic, high energy metal oxide varistors per mode with integral thermal and overcurrent protection
- Illuminated LED indicates proper function of protective elements

Technical data



The THQLSURGE is designed for service entrance or subpanel locations. It provides small, easy to install surge protection for the entire home or office. The surge protective device consists of monolithic, high energy metal oxide varistors per mode with integral thermal and overcurrent protection. An illuminated LED indicates the proper function of the protective elements. The THQLSURGE conveniently connects inside the GE PowerMark load center, directly onto the bus, like a circuit breaker, providing surge protective elements for the entire panel and all attached loads.

Catalog number	Total surge current rating[1]	Per mode surge current rating[2]	System voltage 50/60 Hz	Transient energy rating, 10/1000 µS, total	Nominal discharge current In	Configuration	UL 1449 4th edition Voltage Protection Rating (VPR)			
							L-N	N-G	L-G	L-L
THQLSURGE	50 kA	25 kA	120/240 V	1520 J	10 kA	1 ph 3 wire	500 V	–	–	900 V

[1] Total surge rating is defined as the maximum surge current in the entire device for a single pulse 8/20µS
[2] Per mode defined as varistor surge current, single pulse 8/20µS

THQLSURGE

- Up to 225 amp load centers
- SCCR to 100 kA
- For use in GE load centers
- Can be used to meet NEC® 2020 Art. 230.67

Low voltage general purpose dry type transformers

Single phase and three phase; 600 volts and below

General and technical information

Small & large power transformers 600 volts and below

Introduction

ABB's comprehensive family of low voltage dry type transformers (LVDTT) provide long life, quiet, and reliable operation.

Type QL are ABB's large power transformers ranging from 15 kVA to 1000 kVA. The QL transformers come in standard NEMA 2 enclosures with rain shield kits available for NEMA 3R installations. Stainless steel enclosures are available as options as well. QL transformers are available in single or Three-phase configurations with either aluminum or copper windings. Type QL's are DOE 2016 compliant with models available for Canadian NRCan efficiency standards.

All of the LVDTTs through 1,000 kVA are UL listed under the requirements of Standard 5085 and/or 1561. In addition, each transformer meets the requirements of NEMA ST-20-2014.

General purpose transformers are rated 600 Volts and below for supplying appliances, lighting, and power loads from electrical distribution systems. Standard distribution voltages are 600, 480, and 240 Volts; standard load voltages are 480, 277, 240, 208, and 120 Volts. The transformer is used to obtain the load voltage from the distribution voltage while providing galvanic isolation. Since no vaults are required for installation, these transformers can be located right at the load to provide the correct voltage for the application. This eliminates the need for long, costly, low voltage feeders.

Construction – Type QL

Large power transformers

QL units come standard enclosed in a NEMA 2 drip-proof painted metal enclosure with natural draft ventilation. The core-and-coil assembly is mounted on rubber isolation pads to reduce noise generated by transformer vibration. Rain shield kits are available for conversion to a NEMA 3R enclosure suitable for outdoor service. Type QL transformers are UL Listed: XQNX:E79145; XQNX7:E79145; XQNX2:E79145 or XQNX8:E79145.

Coil construction, 3 phase general purpose, all 100% production tested				
Coil material	**kVA range**	**Coil temperature**	**Terminal connections**	**Windings[1]**
AL	15 to 150	150	Bolted	Continuous
	225 to 500	150	Welded	
	15 to 112.5	115	Bolted	
	150 to 500	115	Welded	
	15 to 112.5	80	Bolted	
	150 to 300	80	Welded	
CU	15 to 150	150	Bolted	Continuous
	225 to 500	150	Welded	
	15 to 150	115	Bolted	
	225 to 500	115	Welded	
	15 to 112.5	80	Bolted	
	150 to 300	80	Welded	

[1]Rarely a coil may have a welded internal connection. All transformers are 100% tested, assuring internal resistance and losses are within established standards, UL and NEMA requirements.

NEMA enclosure ratings

Type QL transformers are standard as NEMA 2 painted steel enclosures. NEMA 3R or NEMA 3R stainless steel (316) enclosures are available up to 150 kVA. NEMA 3R includes the rain shield kit (also 316 SS).

NEMA enclosure rating	Standard or optional	Installation location	Optional rain shield
NEMA 2 (ANSI 61 Painted)	Standard	Indoor	Not required
NEMA 2 (316 Stainless Steel)[2]	Optional	Indoor	Not required
NEMA 3R (ANSI 61 painted)	Optional	Indoor or Outdoor	Required & painted
NEMA 3R (316 Stainless Steel)[2]	Optional	Indoor or Outdoor	Required & 316 SS
NEMA 4X (316 Stainless Steel)[3]	Optional	Indoor or Outdoor	Required & 316 SS

[2] Up to 150 kVA

[3] Special order only, must be quoted and not available for all transformers

To specify a stainless-steel enclosure for an aluminum wound transformer, substitute the letter "S" in the fifth character of the ABB product number. For example, 9T10A1004 changes to 9T10S1004. For copper wound transformers substitute the letter "Z" in the fifth character of the ABB product number. For example, 9T10C1004 changes to 9T10Z1004. All QL model product numbers begin with 9T1, 9T6, 9T7 and 9T8.

Transformer taps

Transformer taps compensate for high or low line (supply) voltages. FCAN (full capacity above nominal) and FCBN (full capacity below nominal) are standard on Type QL transformers rated 15 kVA through 300 kVA and with a primary voltage of 240 V or higher. These have a total of six available voltage taps – four 2.5% taps (FCBN) below the nominal tap and two 2.5% taps above (FCAN) the nominal tap. This arrangement provides a 15% range of tap voltage adjustment. Transformers rated 500 kVA and higher have four available voltage taps – two 2.5% taps above (FCAN) the nominal tap and two 2.5% taps below (FCBN) the nominal tap.

Sound levels

All general purpose transformers are as quiet, or quieter than required by NEMA ST-20. Average sound levels are warranted not to exceed the values listed for each load rating shown in the below table. Sound characteristics vary between transformers of identical voltage and kVA rating. The range of variation may be 4 to 8 decibels.

These values apply only to specified test conditions because the characteristic of the installation can cause them to be higher under operating conditions. Where acoustical noise is deemed to be of concern, proper steps should be taken during installation to minimize audible noise transmission. Please refer to the installation manual for installation and operation recommended practices to minimize the audible sound of the transformer.

If lower sound levels are needed or desired, -3 dB and -5 dB options are available for most models.

	Average Sound Level, Decibels	
	Self cooled ventilated	
Equivalent Winding kVA Range	**A**	**B**
	K-factor = 1 K-factor = 4	**K-factor = 13 K-factor = 20**
9.01 to 15.00	45	45
15.01 to 30.00	45	45
30.01 to 50.00	45	48
50.01 to 75.00	50	53
75.01 to 112.50	50	53

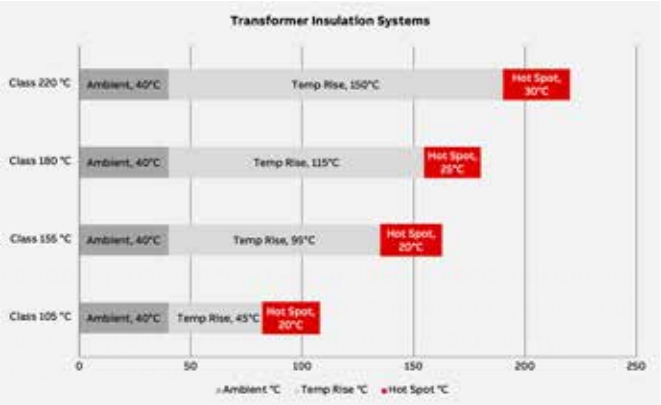
700.01 to 1000.00	64	67

General and technical information



Small & large power transformers 600 volts and below

Insulation systems

Industry standards classify insulation systems in accordance with the rating system shown below.

Transformer insulation systems

Insulation Rating	Insulation Letter Class (NEMA/UL)	Ambient	+ Avg Coil Temp Rise	+ Hot Spot Temp Rise	= Max. Coil Temp
Class 105	A	40 °C	45 °C	20 °C	105 °C
Class 155	F	40 °C	95 °C	20 °C	155 °C
Class 180	H	40 °C	115 °C	25 °C	180 °C
Class 220	R	40 °C	150 °C	30 °C	220 °C

The design life of transformers that have different insulation systems is the same, since the allowable temperature rise of an insulation material system is predicated on a specified life for all insulation. The lower temperature systems are designed for the same life as higher temperature systems.

Key to the chart

- All assume 40 °C ambient temperature.
- Coil temperature rating (Temp Rise) is a typical specification when choosing a transformer
- The Hot Spot is the buffer added for internal hot spots
- For large power transformers, an 80 °C temp rise will cost more than a 150 °C, and will likely last longer
- Designing for other ambient temperatures like 50 °C for use in desert regions will increase the cost
- Lower coil temp rise = higher price
- Higher ambient temp requirement = higher price

Type QL insulation system

- Insulation Class: 220 °C, UL recognized insulation system with a maximum of 150, 115 or 80 °C rise above 40 °C ambient temperature
- Temperature rise ratings are in accordance with UL 1561
- All ABB Type QL dry type transformers use a 220 °C insulation rating class

Construction – Type IP, QB and QMS

Small Power Transformers - Types QB and QMS

QB and QMS small power transformers come standard in NEMA 3R nonventilated weatherproof enclosures. Type QB and QMS units feature encapsulated copper core and coils with integrated junction boxes for easy wiring.

Types QB and QMS are UL and cUL Listed XPTQ.E323774 and XPTQ7.E323774.

Small Power Transformers - Type IP

Type IP small power transformers are broken down into two categories - Machine Tool and Control Power. All are manufactured using copper windings and are UL and cUL Listed. Machine Tool transformers are used when higher inrush currents are required to drive more peak power demanding loads.

Type IP transformers are UL and cUL listed XPTQ.E323774 and XPTQ7.E323774.

Termination

Improved termination spacing and wiring compartment room gives greater flexibility in selecting various UL listed connectors for either copper or aluminum cable.

Catalog Number Selection Instructions

1. Establish phase and frequency
2. Determine the primary voltage—the voltage presently available
3. Determine the secondary voltage—the voltage needed at the load
4. Determine the kVA load, allowing room for expansion
5. Using the facts determined in the four steps, locate the transformer model in the listings on the following pages.

Small Power: Type QB, .050 kVA-3 kVA, Single-Phase

Small Power: Type QMS, 5 kVA-25 kVA, Single-Phase

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

General purpose
Applicable standards

ABB dry type transformers conform to the standards as shown above and are in compliance with these standards below:

- ANSI/NFPA 70: National Electrical Code
- ANSI/IEEE C57.96, Distribution Transformers, Guide for Loading Dry Type appendix to ANSI C57.12 standards
- IEEE C57.12.01: General Requirements for Dry Type Distribution Transformers
- IEEE C57.12.91, Test Code for Dry Type Distribution Transformers
- NEMA ST-20: Dry Type Transformers for General Applications
- UL 1561, Dry Type General Purpose Power Transformer G. Efficiency level DOE 2016 by 10 CFR PART 431
- UL Energy Verification – for US and Canada (ZXPC: EV519886) (ZZED: EV23760)

ABB's dry type transformers are manufactured in an ISO 9001 certified plant.

ISO 9001:2015
BUREAU VERITAS
Certification

General purpose

Single-phase DOE 2016 and NRCan efficiency
Common transformers

ABB's general purpose single-phase dry type transformers are step-down transformers designed for installations that require a 3-wire secondary voltage for 120/240 V systems. These units can also be used in 2-wire, 120x240 V applications. Their primary voltages are 240x480.

Optional wall mount brackets are available for most models. lug kit and copper ground bar are included.

Technical characteristics

- Connection: 3-wire or 2-wire secondaries
- Voltages: (P) 240x480 (S) 120/240
- Temperature rise: 150 °C; 220 °C insulation class; IEC 60085 Class R
- Frequency: 60 Hz
- Ambient temperature: 40 °C
- Standard single-phase tap arrangement
- Painted, ANSI #61 gray NEMA 2 enclosure
- Type QL
- Audible sound level: NEMA ST-20 Standard
- Seismic qualifications – CBC 2019 and IBC 2018; ASCE 7.05-2016
- UL 1561
- UL & cUL listed (XQNX, XQNX7:E79145)
- Energy efficiency: DOE 2016 (10 CFR Part 431)
- Energy efficiency: NRCan (CSA 802.2)
- UL energy verification – for US and Canada (ZXPC:EV519886) (ZZED:EV23760)

General purpose

Three-phase DOE 2016 efficiency

Advantages

- Quiet performance
- No-weld design
- IEEE and NEMA factory testing assures quality
- Accessible mounting foot design speeds installation
- Lug kit and ground bar kit included up through 150 kVA
- ABB's exclusive wood crate packaging (up to 150 kVA) helps reduce shipping damage

Key Features

- Unique core and coil design makes QL transformers among the quietest available
- Core and coil assemblies are mounted on rubber isolation pads to reduce audible noise
- Single-piece front/back is easily removable for service
- Accessible mounting flanges with front/back slotted mounting holes make installation easier
- 100% factory tested for shorts and coil integrity, current and loss, voltage, impedance and noise.
- NEMA 2 drip-proof enclosure is standard. Paint color is ANSI #61 gray. Rain shield kits are available to convert standard NEMA 2 transformers to NEMA 3R for outdoor installations.
- NEMA 3R stainless steel enclosure is available up to 150 kVA. To specify a stainless steel enclosure, substitute the fifth character in the ABB catalog number per the following examples:
  - For Aluminum coil: 9T10A1004 changes to 9T10S1004
  - For Copper coil: 9T10C1004 changes to 9T10Z1004
- Seismic qualified to the requirements of ASCE 7-16, IEEE-693-2005 and IBC-2018/CBC-2019
- Copper or aluminum windings
- Copper ground strap
- Optional Individualized Test Reports available for IEEE performance and/or NEMA ST-20 Audible Sound Levels

Applications

- Commercial
- Industrial
- Motors
- Incandescent lighting
- Resistance heating
- Motor generators (without solid state drives)
- Galvanic isolation
- Power supply network conversion

K-factor

Aluminum coil
Three-phase DOE 2016 efficiency
Electrostatic shield

Type QL, UL K-factor Transformer

Product Description

K-factor is a standardized way to indicate the ability of a transformer to withstand harmonics. These units shall not exceed rated winding temperature rise at full load and rated K-factor. Neutrals and lugs are capable of handling 200% of rated secondary phase current.

Full-width copper electrostatic shielding is standard on all ABB K-factor rated transformers. Effective coupling capacitance is 30 pf. Common mode noise attenuation averages 120 dB, and transverse mode noise attenuation averages 30 dB.

Applications

For commercial applications with significant nonlinear electronic loading, use K=4 for systems with 50% connected nonlinear electronic loads; K=13 for systems with 100% connected nonlinear electronic loads.

Higher K-factor rated units are available for unique applications.

Low noise (-3 dB below NEMA ST-20 standard)

Aluminum coil

Three-phase DOE 2016 efficiency

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

Product Description

These low noise transformers are designed to operate at reduced noise levels. The vibrations within the magnetic steel core have been greatly reduced, thus lowering the humming of the transformer 3 dB less (1/2 of the sound energy) than NEMA/ANSI standards. Available in Aluminum or Copper windings, with either a 150°C, 115°C or 80°C rise.

Applications

Type QL low noise transformers are ideal when quiet operation is required such as near offices, in school buildings, or hospitals. Although they are inherently quieter, installation can greatly influence their noise level and therefore care should be taken in following acoustical principles as well as proper installation procedures. Closets and corners should be avoided as they act as megaphones by seemingly increasing noise levels.

Noise isolation — Guard I™

Aluminum coil
Three-phase DOE 2016 efficiency
Electrostatic shield

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

Guard I™ Noise Isolation Transformers provide common mode noise signal between neutral and ground and transverse mode noise protection. Common mode noise is caused by electromagnetic interference, radio interference and ground loops.

Key features

- 120 db common mode noise protection
- 30 db transverse mode noise protection
- NEMA 1 and/or 2 drip-proof enclosure
- Rain shield available for field conversion to NEMA 3R
- NEMA 3R stainless steel (Type 316) available through 150 kVA

Noise isolation — Guard II™

Aluminum coil
Three-phase DOE 2016 efficiency
Electrostatic shield

Guard II™ Transformer, (front panel removed)

Guard II™ noise isolation transformers provide common mode noise attenuation plus an enhanced level of transverse mode noise attenuation for increased protection of sensitive electronic equipment.

Key Features

- Grounded copper electrostatic shield between primary and secondary windings
- Noise suppressors and spike/surge suppressors
- 120dB common mode noise rejection
- 60dB transverse mode noise rejection
- Compliance with ANSI and NEMA standards
- Sound levels below NEMA ST-20 limits
- UL Listed
- NEMA 2 enclosure

Harmonic mitigating — Guard III™

Copper coil
Three-phase DOE 2016 efficiency
Electrostatic shield

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

Guard III™ Harmonic Mitigating Transformers help eliminate harmonics, improve power quality, and help save energy by reducing the energy (heating) losses. They maintain DOE 2016 energy efficiency even when harmonics are present.

Power supplies that convert AC to DC current – for plant floor equipment, computers, copiers, electronic ballasts, and others – generate harmonics that create an irregular current waveform. These harmonics, in turn, create power quality problems such as overheated transformers, motors and neutral wires; nuisance breaker trips; and electronic equipment malfunction and failure.

Key Features

- 0° Phase shift; +15° Phase Shift; -15° Phase Shift or -30° Phase Shift
- Copper windings
- K-factor load profile of 20
- Crest factor load profile of 5
- NEMA 1 and/or 2 drip-proof enclosure
- Rain shield available for field conversion to NEMA 3R
- NEMA 3R stainless steel (Type 316) up through 150 kVA

Servicenter™ mini-unit substations

Integral transformer and distribution center

Product Description
This easily installed and serviceable unit incorporates a Type QMS transformer (single-phase) or a Type QL transformer (three-phase), a primary main circuit breaker, a secondary main circuit breaker, and a load-center-design breaker panel. Since these components don't have to be installed and interconnected separately, the contractor or user can reduce installation time and costs. Because of the single-unit concept, only one, handy Servicenter™ needs to be mounted.

Available in single-phase, 5 through 25 kVA, and in three-phase, 15 through 30 kVA, 600 Volt class ratings, the ABB Servicenter™ is a convenient, economical way to meet your industrial and temporary power requirements.

The Transformer—The Servicenter™ utilizes ABB transformer design which has twenty years of field-proven experience behind it and a long track record for assuring consistent, reliable performance. Type QMS transformers employ a 180°C UL Recognized insulation system with a 115°C rise. Type QL transformers employ a 220°C UL Recognized insulation system with a 150°C rise.

The Panel—The panel assembly includes the rugged ABB PowerMark Plus™ circuit breaker load center interior, E-frame primary breakers, and E-frame or Q Line secondary breakers. The load center will accept one-, two-, or three-pole (three-phase) common trip circuit breakers and ground fault breakers. All Servicenters™ come equipped with the properly sized primary main and secondary main circuit breakers installed and prewired. Branch breakers are not included. The load center is rated at 10 kAIC SCCR.

Advantages
- Transformer, load center and breakers are all designed, built and assembled by ABB
- Saves time and money - pre-assembled, pre-wired unit saves time on the job
- High reliability – assembled and tested in our UL approved factory to assure consistency and quality
- Available ABB ground-fault breakers ensure electrical safety around construction sites or wherever water may be present
-

Key Features
- Keyhole mounting flange facilitates easy mounting
- Indoor and outdoor use
- Front-accessible, hinged or removable panel door is safe and convenient
- Heat barrier under core and coil provides electrical and thermal isolation for wiring compartment
- High-efficiency core construction results in quiet transformer operation and low no-load losses
- Factory installed and wired ABB main and secondary main circuit breakers

Application
The single-phase Servicenter™ can be used wherever 480 Volt power is available and 120 or 240 Volt branch circuits are required. The three-phase Servicenter™ can be used wherever 240 Volt, 480 Volt or 600 Volt primary is available and 208Y/120 Volt secondary circuits are required. The unit can be used in such applications as vending machine areas, construction laboratory test areas, general construction sites where temporary or quickly obtained power is required, or where future expansion of branch circuits is planned.
- Vending or concession areas
- Office buildings
- Assembly lines
- Mining applications
- Parking lots
- Light industrial areas
- Warehouses
- Construction sites
-

NEC Requirements
The Servicenter™ conforms with Article 450-3 of the National Electric Code regarding overcurrent protection requirements for transformers and are UL listed to UL 1062, YEFR:E75204.

* Short ciruit current rating 10,000 RMS symmetrical amperes, 240V maximum

** Provisions for branch circuit breakers Type THHQL, THHQAL, THQP, THQL, THQL-AC, THQAL-AC, THQL-GRC I, THHQL-GFCI or circuit breakers

Typical Wiring Diagram Single-Phase

Typical Wiring Diagram Three-Phase[1]

[1]For 22.5 and 15 kVA three-phase Servicenters™, secondary main breaker is a backfed plug-in type with positive retainers.

Totally enclosed, nonventilated

TENV

15-75kVA, three-phase, NEMA TP-1 efficiency

TENV Transformer

Totally enclosed nonventilated (TENV) transformers are an excellent choice for applications where dry-type transformer benefits are desired but the standard enclosure openings are unacceptable because of adverse atmospheric conditions. TENV transformers are recommended where dust, dirt or lint may be present or where transformers are subject to sprays or controlled wash-down conditions. They are UL Listed through 75kVA for indoor or protected outdoor applications.

Advantages

- Dry-type transformer is housed in an enclosed NEMA 3R (IP32) non-ventilated compartment
- Convenient wiring compartment is located beneath the transformer and has removable front and rear covers
- Copper bus bars are located at the front of the wiring compartment and are clearly labeled
- All electrical connections between the transformer and bus bars are factory wired
- Quiet performance – meets NEMA ST-20
- No-weld coil termination design
- Comprehensive factory testing assures quality

Features

- Quiet design - unique core and coil design makes ABB TENV transformers among the quietest available
- Core and coil assembly mounted on rubber isolation pads to reduce noise
- 100% factory tested for shorts and coil integrity, current and loss, voltage, impedance and noise
- Qualified to the seismic requirements of IEEE-693-2005 and IBC-2018/CBC-2019
- Copper ground strap
- Copper or aluminum windings available
- Available in 150°C, 115°C, and 80°C rise models
- Indoor or outdoor use

Applications

- Textile
- Automotive
- Foundry
- Paper mills
- Wash-down areas

Totally enclosed, nonventilated

Midtapped

Aluminum

Three-phase DOE 2016 efficiency

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

ABB Type QL midtapped transformer enables the user to transform three-phase power from 480 Volts primary to 240 Volts secondary and have 120 Volt, reduced capacity tap (RCT) single-phase capability as well. This is because a single-phase midtap is brought out of one coil of the unit's three-phase secondary winding. These transformers are UL listed, File E-79145.

Application

The Type QL midtapped design can be used wherever there is 480 Volt, three-phase supply available and the load is primarily 240 Volt three-phase with a nominal amount of 120 Volt, single-phase power required. Normally, in this instance, a small single-phase as well as a three-phase transformer would be required to provide the necessary transformation.

Caution: When utilizing the 120 Volt midtap for single-phase applications, the single-phase load should not exceed 5 percent of the three-phase kVA rating. The three-phase kVA load must be reduced by the same percentage as that added by the single-phase load. Additional loading beyond 5 percent may cause the transformer to overheat and fail. If the single-phase load is in excess of 5 percent, it is recommended that a separate single-phase unit be used to handle the load.

Drive isolation

Aluminum

Three-phase

Application

The use of SCR control circuitry with adjustable-speed drives has resulted in a need for a line of isolation transformers specifically designed to meet the demanding requirements of SCR drives.

Symmetrically placed taps and added coil bracing minimize mechanical forces caused by the often severe SCR drive duty cycles.

These features also help protect the transformer from the regenerative duty and more frequent short-circuits associated with SCR drives. Isolation transformers also reduce line-pollution feedback resulting from SCR firing circuits. The ABB delta-wye designs meet the NEC requirements for grounded secondary neutrals that isolate primary distribution systems. kVA ratings of the DIT line cover most dc motor requirements from 3 to 1000 hp. Enclosed drive isolation transformers are UL listed.

Large Power: Type QL, 15 kVA-250 kVA, Single-Phase, DOE 2016 Efficiency, 15 kVA-500 kVA, Three-Phase, DOE 2016 Efficiency

[1] See page 10-45 and 10-46 for wiring diagrams.

NOTE: Full capacity symmetrical taps (1) +5% and (1) –5%, in primary windings for 230 and 460 Y thru 550 kVA; (1) +6.2% and (1) –6.2% at 750 kVA; (1) +6.4% and (1) –6.4%) at 1000 kVA. With 575 V primary, symmetrical 5% taps apply thru 750 kVA; at 1000 kVA, (1) +5.1% and (1) –5.1%. For ratings less than 15 kV contact ABB Sales Office.

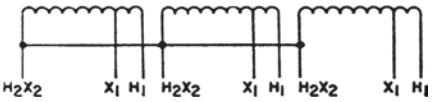
Buck-Boost

Encapsulated Autotransformers For bucking and boosting voltage



Wiring Diagram: Single-Phase

Application

For General Lighting and Power Service

Autotransformers are more economical than isolation transformers designed to carry the same load. Within their voltage limitations, they will perform the same function as transformers with the exception of insulating two circuits. You can use these autotransformers to obtain 120 Volts from a 240 Volt circuit, to derive a neutral on a 240 Volt, two-wire circuit, or to balance a 120/240 Volt, three-wire circuit. They also may be used in banks on polyphase circuits. See footnotes below.

Buck-Boost

Encapsulated

For bucking and boosting voltage

Indoor/Outdoor Type QB Transformer; Single-Phase

Wiring Diagram for Low Voltage Loads

Product Description

Buck boost transformers are small, single-phase, dry type distribution transformers designed and shipped as insulating/isolating transformers. They have a dual voltage primary and a dual voltage secondary. These transformers can be connected for a wide range of voltage combinations. The most common use is to buck (lower) or boost (raise) the supply voltage a small amount, usually 5 to 27%. Buck boost transformers comply with NEC Article 210-9, Exception 1, when field connected as an autotransformer.

ABB bucking and boosting transformers provide an economical and convenient means for bucking or boosting voltage, usually no more than ±20% on single- and three-phase circuits. They are compact, relatively light in weight, and can be easily installed for indoor or outdoor service.

Buck-boost transformers are employed primarily for boosting single-and three-phase circuits by connecting them as autotransformers. When connected as an autotransformer, only the low-voltage, high-current capacity secondary windings are required to carry the load. Because this load is only transformed over a small change in voltage, the buck-boost transformer can handle loads many times its nameplate kVA rating.

The transformers with series-multiple 12/24, 24/48, or 16/32 Volt secondary windings are suitable for a wide variety of applications. Two or more units can be used in various combinations to obtain many other special voltages.

Advantages

- Efficient insulating materials permit compact size and light weight
- Dual voltage primary and dual voltage secondary formaximum versatility
- Large, front-accessible wiring compartment permits fast, easy wiring
- Convenient conduit knockouts located on side, bottom and back of wiring compartment
- ABB Buck-Boost Transformer Selector makes selection fast and easy
- Many ABB buck-boost transformers fit competitor mounting footprints
- Indoor or outdoor service

Key Features

- Convenient and least expensive method of matching line voltage with equipment voltage
- More efficient than equivalent isolation transformers
- Ability to handle loads up to 20 times nameplate rating when connected as an autotransformer
- Ideal for changing line voltages by small amounts
- Primary voltages include 120V, 240V and 480V
- Secondary voltages include 12V, 16V, 24V, 32V, 48V
- UL and cUL Listed
- Qualified to the seismic requirements of IEEE-693-1997 and IBC-2018

Applications

- International voltage adaptation
- Commercial and industrial air conditioning
- Heating systems
- Induction motors
- Voltage line drop correction
- Landscape lighting
- Low-voltage lighting

Efficient operation of electrical equipment requires that line voltage be at or near the nameplate rating of the equipment. In order to match available line voltage (whether it be too high or low) with equipment voltage, buck-boost transformers provide the most convenient and least expensive method.

Do not use buck-boost transformers to solve a fluctuating voltage problem. They should be used to compensate for high- or low voltage conditions only when the available line voltage is reasonably constant.

NOTE: In addition to bucking or boosting low circuit voltages to related value, these transformers can be used as two winding transformers to supply the rated nameplate low voltages, 12 to 48 Volts, two-wire or 12/24 to 24/48 Volts, three-wire. Also available in 50/60 Hz ratings.

Open core and coil transformers

Machine tool and control power

Core and Coil Transformer Leads Out Connection

Core and Coil Transformer Terminal Block

Product Description
Core and coil transformers for machine tools are used to provide voltage to control devices in applications where regulation and minimum space are important. Welded cores provide the highest quality electrical performance and quiet operation.

Standards: Type IP transformers conform to NEMA ST20

Listings: UL listed under UL-5085, File E323774
CSA Certified under C22.2, Number 66, File E323774

Insulation Classes: 150VA and below: 105°C insulation class, 55°C Rise
200VA and above: 185°C (NEMA) 180°C (UL) insulation class, 115°C Rise

Frequency: 60 Hz standard; 50 Hz optional.

Voltage Regulation: All designs 2.0 kVA and below are compensated for voltage drop. Compensation ranges from 10% in the smallest rating to 3% for the largest. All machine tool designs meet or exceed NMTBA regulation requirements.

Series-Multiple Secondary Connections: Transformers with 120/240 V secondaries (series-multiple) may be connected for 120 V, 240 V or 240/120 V three-wire. Jumpers are provided.

Overcurrent Protection: Type IP transformers are low impedance transformers that require overcurrent protection for most applications. They provide for optional integral primary and/or secondary fusing.

Mounting Dimensions: Type IP transformers are lightweight, small, and designed for minimum mounting dimensions. Many units will fit competitors mounting footprints.

Advantages
- Finger-safe terminals offer added protection and safety
- Pressure plate terminals ensure secure connections
- Wide variety of fusing options. See page 10-60.

Key Features—Terminal Block
- Rugged, high-impact plastic terminal block
- Full head #8 brass screws assure quick, easy terminations with maximum connection integrity
- Copper windings
- Flexible design allows input or output voltage to match any application
- CUL, CE, UL approvals
- Available fuse-blocks offer simple, low-cost fusing

Open core and coil transformers

CE-rated

Application

Application

This product is designed to be incorporated into equipment manufactured for sale in the European Community. This product is in conformity with the Low Voltage Directive 2014/35/EU of 06 JUN 2018 per the provisions of the following standard:
IEC 61558-2-6:2009-02 Edition 2.0; Safety of transformers, reactors, power supply units and similar products for supply voltages..

The Type "IP" CE offering utilizes all copper windings, which are encapsulated in a hardened epoxy, making the winding impervious to the elements. These designs are rated at 55° C rise with a 40° C ambient. Standard on these designs are terminal block covers. These provide added protection from current carrying terminals. These designs incorporate customer friendly connection on rugged high-impact molded terminal blocks.

Factory- or Field-Installed Options

Factory- or Field-Installed Options

Available as an option are two fuse blocks that have fuse covers that provide the touch safety like the terminal blocks. These can be ordered factory-installed or as kits.

In kit form order:
Fuse block for 2 class CC fuses is 9T58E0000G46. Fuse block for 2 class CC and 1 Midget fuse is 9T58E0000G47. See page 65 for fuse block kits..

For factory installation add the G46 or G47 suffix to the transformer Catalog Number (example 9T58E0020G47).

Besides being CE rated, these designs are both UL and C-UL listed.

ABB has a full product range of auxiliary contacts completed by the S2C-S/H6R universal contacts. An auxiliary contact indicates the position of the MCB. A signal contact indicates the MCB position plus the fault event, i.e., overload or short-circuit.

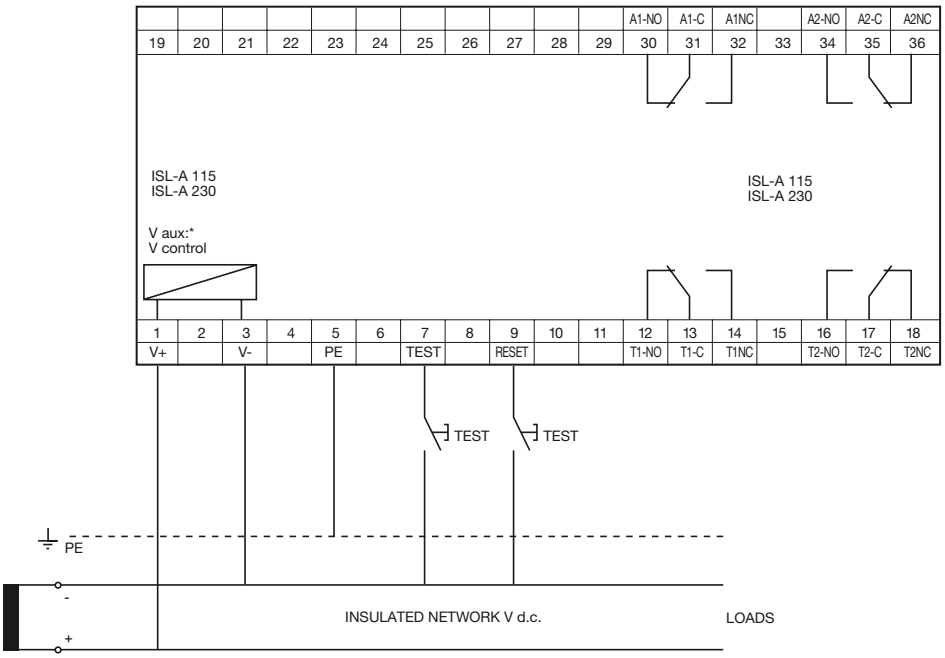
MICROSWITCH SETTINGS



The front microswitches allow the insulation threshold level to be adjusted between 10 and 60 kW, as shown below:

Quick product references

Protection and safety wiring diagrams

ISL-A 115 and ISL-A 230

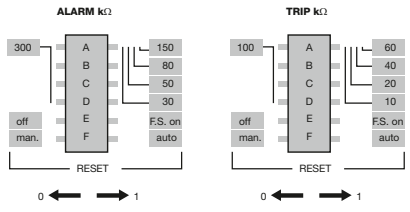
MICROSWITCH SETTINGS

The front microswitches are used for adjusting the insulation threshold level, enabling the fail-safe function and configuring the reset mode for both the alarm and trip thresholds.

Microswitches A, B, C, D for programming the trip and alarm thresholds:

ALARM		TRIP	
300 kΩ:	A=0, B=0, C=0, D=0	100 kΩ:	A=0, B=0, C=0, D=0
150 kΩ:	A=1, B=0, C=0, D=0	60 kΩ:	A=1, B=0, C=0, D=0
80 kΩ:	A=1, B=1, C=0, D=0	40 kΩ:	A=1, B=1, C=0, D=0
50 kΩ:	A=1, B=1, C=1, D=0	20 kΩ:	A=1, B=1, C=1, D=0
30 kΩ:	A=1, B=1, C=1, D=1	10 kΩ:	A=1, B=1, C=1, D=1

Microswitch E for configuring the FAIL SAFE mode

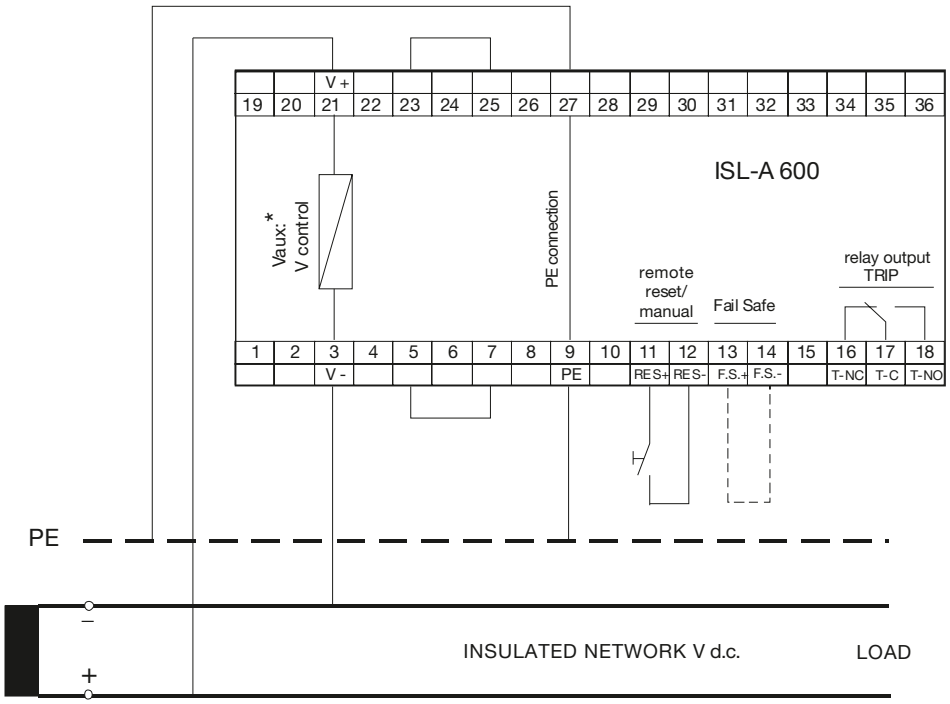


E=0 fail safe mode disabled

E=1 fail safe mode enabled

Microswitch F for configuring the RESET mode

F=0 manual reset



F=1 automatic reset

MCBs and RCDs worldwide marks and approvals

This is the present situation regarding worldwide marks and approvals for ABB System pro M compact range devices.
Although some products already obtained some approvals or certificates, they don't necessarily bear the related marks on the product.

For detailed list of approval, please check our product detail page and download section

The F 200 range has obtained the EPD (Environmental Product Declaration), according to ISO 14040.

EPD

This product/service has a
CERTIFIED ENVIRONMENTAL PRODUCT DECLARATION
describing information about environmental performance, contents and recycling which has been controlled and verified by Rina according to MSR 1999:2
Registration number: S-P 00080 and S-P 00081
