

HELPING MEMBERS MAKE A 'GREEN PIVOT'

There isn't much time to mitigate the impact of global warming. As clients and industry turn to cleaner, greener ways of lighting and heating their homes and businesses, much of the work to meet our net zero carbon goals relies on the electrician's skillset.

The work starts now.

There are many opportunities for electrical contractors to make a 'green pivot' and use their skills to play a key role in delivering energy-efficient, low-carbon installations. But selecting the right training, certification and technologies can be a minefield.

NET ZERO carbon by 2050

Supporting Members to be part of the journey

ECA is committed to supporting the electrical and wider engineering service sector's delivery of the technologies and skills that will help attain the UK's Net Zero Carbon 2050 target.

We have published in-depth guidance and resources for our members to support them in developing and growing their businesses to be part of the journey in achieving Net Zero Carbon. Discover new opportunities for your business as well as training and accreditation for electrotechnical contractors in the Green Economy.

As an ECA Member, you will have access to an extensive range of exclusive and specialist guidance, advice and resources to support your business.

Our sector has government backing giving industry and the public further confidence that Net Zero Carbon is within our reach. They have recently:

- Earmarked £12 billion of investment for the Green Economy
- Released a 10-point plan to reach Net-Zero
- Published a trailblazing energy white paper and launched the Green Homes Grant

Our Green Pivot Guidance Note gives exclusive insight into the specialist areas for the electrotechnical industry including:

- Electrification of transport (electric vehicles, rail and shipping)
- Electrification of heating (including heat pumps)
- Solar PV and Electrical Energy Storage Systems (EESS)
- Grants and schemes
- PAS 2030 and PAS 2035
