

PERFECT TRUNKING PACKAGE FOR ACADEMY

A trio of Marshall-Tufflex cable management solutions have been used extensively throughout a re-developed school in Stockton-on-Tees, Northumberland, which has just recorded the best results in its history.

The new Grangefield Academy replaced an old building on the same site, delivering hi-tech, modern facilities for more than 1,000 students. Three Marshall-Tufflex trunking solutions – Mono Plus 20, Sterling Profile and aluminium Bench Trunking – were specified to manage the large volumes of power and data cabling throughout the three-storey building.

Some 1,000 metres of three-compartment Mono Plus 20 have been installed in classrooms, which required a sleek cable management solution. Designed to fit within areas that may have trunking height restrictions, Mono Plus 20 incorporates one main compartment and two smaller outer compartments. It can be sub-divided and is suitable for dado application. One piece fittings allow for quick and easy installation.

Where larger capacity trunking was required, Marshall-Tufflex's Sterling Profile in Charcoal was chosen, a popular solution that is cost-effective and easy to install. Tried and tested within educational establishments over many years, Sterling also offers three segregated compartments, with a separate lid to access each.

The final piece of the Marshall-Tufflex cable management jigsaw was aluminium Bench Trunking installed in the kitchen areas of the school's home economics facilities.

Bench Trunking is adaptable, sturdy and easy to install, with dividing fillets making it ideal for bringing segregated services to bench top working environments. Including standard Sterling front plates, the trunking has a super smooth appearance and double end caps make back-to-back configuration easy. Positive fixing lids mean ease of installation, allowing cabling to be reconfigured at any time.

All the Marshall-Tufflex products were supplied by Edmundson Electrical, Durham.
