Available

Emergency
Available

INCEPTOR® U-LITE

MODULAR LINEAR LED LUMINAIRES

Fast fit terminal blocks are moveable to the end or central entry points, ensuring effortless and efficient wiring for new and retrofit installations.

Suspension wires allow the diffuser to hang securely once the base is installed, making the installation process easier.

Anti-tamper clips create a secure, tight seal between the diffuser and the base, and can be fastened with a screw for added security.

M20 gland knockouts are present at each end and on top of the base.

VERSATILE MOUNTING OPTIONS

Our exclusive Besa mounting system, paired with a unique suspension bracket, ensures effortless installation, with just one Besa mount required, the larger suspension bracket provides enhanced ease and flexibility, making your setup process simpler and more adaptable.

MODULAR DESIGN OPTIONS

The modular design enhances product sustainability as microwave sensors and emergency packs can be retrofitted in-house, by distributors, or end users without tools. Clear markings on the gear tray guide installation, with easy wiring via colour-coded connectors.
