

ORBIK BY OVIA

SPECIALISTS IN EMERGENCY LIGHTING

At Ovia, we understand that emergency lighting is not just another component, it's a life safety system that must perform when everything else fails. That's why Orbik products are built to the highest standards of durability, performance, and compliance.

Self Test Enable / Disable

The range features an enable/disable self-test function, providing a smarter, safer, and more cost-effective approach to maintenance. When enabled, each fitting automatically carries out routine function tests, helping ensure compliance without the need for manual checks. This reduces labour costs, detects faults early, and enhances overall safety. Building owners benefit from streamlined maintenance and the assurance that their emergency lighting systems are always ready, without added effort.

5 Year Warranties

When it comes to emergency lighting, reliability isn't optional, it's essential. That's why the entire Orbik by Ovia range is backed by a full 5-year warranty, giving you peace of mind long after installation.

ONE RANGE. EVERY REQUIREMENT COVERED.

A self test enable/disable selector switch is inside every product.

Black & white
finishes available

Offering a black finish for emergency lighting allows the fittings to blend seamlessly into modern or design-led environments with dark ceilings or décor, such as offices, hotels, bars, and retail spaces. It provides a more discreet, premium appearance without compromising safety or compliance, giving architects and designers greater flexibility while helping your range stand out in a style-conscious market.
