

BEELO

1 Metre Modular Bollards

Our bollards feature a modular design with interchangeable head options, available in Flat, Domed, Cone, and Louvered styles, offered in both Black and Anthracite Grey finishes. An Emergency version is also available to meet specific safety requirements.

Power Switchable

Seamlessly switch between 14W, 19W and 24W

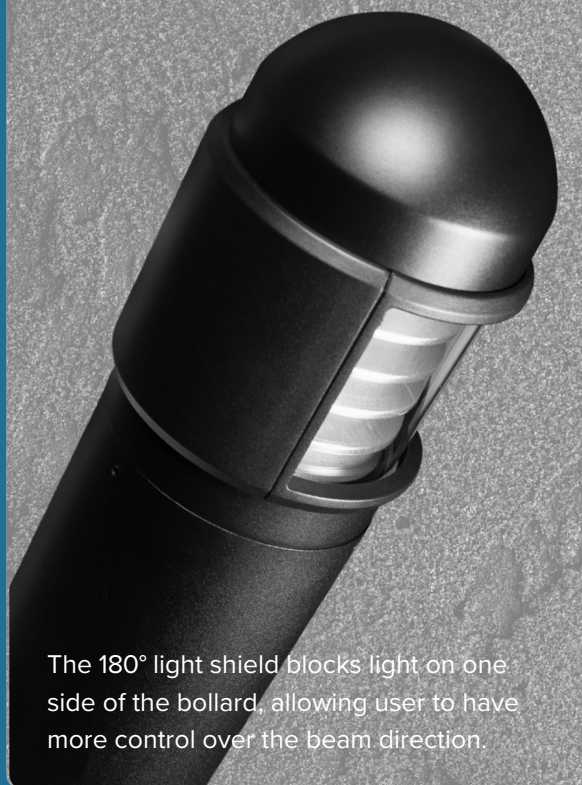

CCT Switchable

Select from either 3000K, 4000K and 6000K colour temperatures.

180° Light Shield

The 180° light shield blocks light on one side of the bollard, allowing user to have more control over the beam direction.

Modular Interchangeable Design

Each bollard head is supplied separately from the post, enabling quick and easy installation or replacement.

Finish Options

All products in the Beelo range are available in a Black or Anthracite Grey finish.

Impact-Absorbing Bollard Bases

Impact-absorbing bases are available as optional accessories designed to enhance the durability and functionality of bollards. Once installed, the base features a built-in spring mechanism that enables the bollard to flex upon impact and then return to its original upright position.

A sustainable solution

Minimising the need for full replacements after impact, this durability means fewer materials are required over time, lowering environmental impact and reducing long-term maintenance costs.

Reduce maintenance costs

Instead of requiring a full bollard replacement after a collision, the flexible base absorbs the impact energy, allowing the bollard to return to its original position.
