SAFER LIGHTING FOR SAFER HOMES

As electrical safety standards in Social Housing are strengthened, every component matters. Our B22d Safety Lampholders are designed to support, in meeting the duty of care, helping to reduce risk, protect residents, and create safer homes.

Engineered with an advanced J-slot safety mechanism, the lampholder automatically disconnects power when the lamp is removed, preventing exposure to live electrical contacts during routine lamp replacement or maintenance. This creates a de-energised environment, significantly reducing the risk of electric shock.

In environments where lighting maintenance may be carried out by tenants, caretakers, or non-technical staff, this added layer of protection is critical.

PRC1031 - 6" T2 BC Ceiling Safety Pendant Set

PRC1033 - 9" T2 BC Ceiling Safety Pendant Set

PRC1015 - T2 BC Loop-in Batten Safety Lampholder with Straight Skirt
